**APPENDIX A1**  
**CDPS GENERAL PERMIT**  
**STORMWATER DISCHARGES ASSOCIATED WITH NON-**  
**EXTRACTIVE INDUSTRIAL ACTIVITY**

---

Colorado Department  
of Public Health  
and Environment

**CERTIFICATION TO DISCHARGE UNDER CDPS GENERAL PERMIT COR900000  
STORMWATER ASSOCIATED WITH NON-EXTRACTIVE INDUSTRIAL ACTIVITY**

Certification Number: **COR900730**

**This Certification to Discharge specifically authorizes:  
Colorado Springs City of  
to discharge stormwater from the facility identified as  
Colorado Springs Airport  
to: Sand Creek - Fountain Creek**

**Facility Located at:** 7770 Milton E Proby Pkwy, El Paso County, Colorado Springs, CO  
80916-2796  
Latitude 38.805833, Longitude -104.700277

Outfalls	Latitude	Longitude
001	38.791829	-104.720240

All discharges must comply with the lawful requirements of federal agencies municipalities, counties, drainage districts and other local agencies regarding any discharges to storm drain systems, conveyances, or other water courses under their jurisdiction.

**REQUIRED MONITORING**

**A. VISUAL MONITORING Part I.I.1 (Quarterly)**

**B. BENCHMARK MONITORING Part I.I.2**

Parameter	Units	Site-specific Benchmark Values	Monitoring Frequency	Sample Type
Chemical Oxygen Demand (COD) 81017	mg/L	120 mg/L	Quarterly	Grab
Total Suspended Solids (TSS) 00530	mg/L	100 mg/L	Quarterly	Grab
pH 00400	s.u.	6.0-9.0 s.u.	Quarterly	Grab

**C. WATER QUALITY STANDARDS MONITORING Part I.I.4**

Discharges authorized under this permit must be controlled as necessary to meet applicable water quality standards.

**Modified and reissued 6/28//2017      Effective: 6/30/2017      Certification Expires: 6/30/2017**  
Mod 1 to add sector AD for concrete and asphalt recycling adding pH parameter.  
**Certification Originally Issued: 6/27/2012      Effective: 7/1/2012**

The general permit COR900000 expires 6/30/2017 and will be administratively continued. This certification will also be administratively continued at that time. It will remain in effect until the general permit is renewed or other actions are taken.

This certification under the permit requires that specific actions be performed at designated times. The certification holder is legally obligated to comply with all terms and conditions of the permit.

Certification approved by  
Michelle DeLaria  
Permits Unit 2 Manager  
Water Quality Control Division

# STATE OF COLORADO

Water Quality Control Division

**CDPS GENERAL PERMIT COR900000**

**FOR**

**STORMWATER DISCHARGES ASSOCIATED WITH**

**NON-EXTRACTIVE INDUSTRIAL ACTIVITY**

**COLORADO DISCHARGE PERMIT SYSTEM**

In compliance with the provisions of the Colorado Water Quality Control Act, (25-8-101 et seq., CRS, 1973 as amended), owners or operators of stormwater discharges associated with non-extractive industrial activity, as defined in this permit, are authorized to discharge from authorized locations throughout the State of Colorado to specified surface waters of the state, in accordance with the eligibility and permit application requirements, effluent limitations, monitoring requirements, inspection requirements, and other conditions set forth in this general permit.

This permit is organized as follows:

Part I (A-L)	Requirements applicable to all Industrial Sectors
Part II	Standard Terms and Conditions
Part III	Sector-Specific Requirements for Industrial Activity
Appendix A	Facilities and Activities Covered
Appendix B	Information Summaries
Appendix C	Definitions and Abbreviations

The applicant may demand an adjudicatory hearing within thirty (30) days of the date of issuance of the final permit determination, per the Colorado Discharge Permit System Regulations, 61.7(1). Should the applicant choose to contest any of the effluent limitations, monitoring requirements or other conditions contained herein, the applicant must comply with Section 24-4-104 CRS and the Colorado Discharge Permit System Regulations. Failure to contest any such effluent limitation, monitoring requirement, or other condition, constitutes consent to the condition by the Applicant.

This permit and the authorization to discharge shall expire at midnight, **June 30, 2017**.

Modification Issued and Signed this 1<sup>st</sup> day of **October, 2012**

COLORADO DEPARTMENT OF PUBLIC HEALTH AND ENVIRONMENT

7/1/2017 Administratively Continued

Janet Kieler, Permits Section Manager  
Water Quality Control Division

**Permit Actions Summary:**

**Modification #1 - Issued October 1, 2012 , Effective October 1, 2012 (Part I.e)**  
**Originally Issued March 7, 2012 and Effective July 1, 2012**

**APPENDIX C. DEFINITIONS AND ABBREVIATIONS (FOR THE PURPOSES OF THIS PERMIT) ..... 110**

**PART I**

**A. COVERAGE UNDER THIS PERMIT**

**1. Facilities Covered**

Facilities eligible to discharge under this permit are those that discharge stormwater associated with non-extractive industrial activity listed in Parts I.A.1.a. and b., below.

**a. Allowable Stormwater Discharges**

Unless otherwise made ineligible under Part I.A.2, the following discharges are eligible for coverage under this permit:

- i) Stormwater discharges associated with industrial activity for any primary industrial activities and co-located industrial activities, as defined in Appendix C (Definitions and Abbreviations) and identified in Appendix A (Facilities and Activities covered), including those subject to any of the national stormwater-specific effluent limitation guidelines (ELGs) under 40 CFR Subchapter N listed in Table A-1 below:

<b>Table A-1. Stormwater-specific Effluent Limitations Guidelines</b>			
<b>Regulated Activity</b>	<b>40 CFR Part/Subpart</b>	<b>Industrial Sector</b>	<b>Effluent Limit</b>
Runoff from phosphate fertilizer manufacturing facilities that comes into contact with any raw materials, finished product, by-products or waste products (SIC 2874)	Part 418, Subpart A	C	See Part III.C.4
Runoff from asphalt emulsion facilities	Part 443, Subpart A	D	See Part III.D.4
Runoff from material storage piles at cement manufacturing facilities	Part 411, Subpart C	E	See Part III.E.5
Runoff from hazardous waste landfills	Part 445, Subpart A	K	See Part III.K.6
Runoff from non-hazardous waste landfills	Part 445, Subpart B	L	See Part III.L.10
Runoff from coal storage piles at steam electric generating facilities	Part 423	O	See Part III.O.8

- ii) Stormwater discharges designated by the Water Quality Control Division (the Division) as needing a stormwater permit because the discharge:
  - a) contributes to a violation of a water quality standard; or
  - b) is a significant contributor of pollutants to waters of the state.

Such stormwater discharges are eligible for coverage under Sector AD of this permit.

- iii) Discharges that are not otherwise required to obtain permit authorization but are commingled with stormwater discharges that are authorized under this permit.
- iv) Stormwater run-on that commingles with stormwater discharges associated with industrial activity.
- v) Stormwater discharges subject to any New Source Performance Standards (NSPS).

**b. Allowable Non-Stormwater Discharges.**

The following non-stormwater discharges are authorized by this permit provided that appropriate control measures are implemented to minimize erosion and sediment transport resulting from such discharges, and the non-stormwater component(s) of the discharge and the control measure(s) used are identified in the SWMP (see Part I.F SWMP—Specific SWMP Requirements):

- i) Uncontaminated condensate from air conditioners, coolers, and other compressors and from the outside storage of refrigerated gases or liquids;
- ii) Landscape watering provided all pesticides, herbicides, and fertilizer have been applied in accordance with the approved labeling;
- iii) Uncontaminated spring water;
- iv) Foundation or footing drains where flows are not contaminated with process materials; and
- v) Incidental windblown mist from cooling towers that collects on rooftops or adjacent portions of the facility, but not intentional discharges from the cooling tower (e.g., “piped” cooling tower blowdown or drains).
- vi) Discharges from wet deck storage areas, which are authorized only if no chemical additives are used in the spray water or applied to the logs, subject to the national ELG listed in Table A-2 below:

<b>Table A-2. Effluent Limitations Guideline</b>			
<b>Regulated Activity</b>	<b>40 CFR Part/Subpart</b>	<b>Industrial Sector</b>	<b>Effluent Limit</b>
Discharges resulting from spray down or intentional wetting of logs at wet deck storage areas.	Part 429, Subpart I	A	See Part III.A.7

**c. Emergency Fire Fighting**

Discharges resulting from emergency fire fighting activities are authorized by this permit.

**2. Limitations on Coverage**

This permit does not authorize the discharges or activities listed below. Permittees may seek individual or alternate general permit coverage for such discharges, as appropriate and available.

**a. Discharges of non-stormwater.**

Discharges of non-stormwater, except those authorized non-stormwater discharges listed in Part I.A.1.b, are not eligible for coverage under this permit.

**b. Stormwater Discharges Associated with Construction Activity.**

Stormwater discharges associated with construction activity disturbing one acre or more are not eligible for coverage under this permit.

**c. Discharges Currently Covered by Another Permit.**

Discharges that are currently covered under an individual permit or an alternative general permit are not eligible for coverage under this permit.

**d. Discharges Currently covered by a Division Low Risk Guidance document.**

Discharges that meet the provisions of a Division Low Risk Guidance document permit are not eligible for coverage under this permit.

**e. Stormwater Discharges Subject to Effluent Limitations Guidelines.**

Discharges subject to stormwater effluent limitation guidelines (ELGs) under 40 CFR, Subchapter N other than those summarized in Part I.A.1, Tables A-1 and A-2 (see relevant sector-specific section(s) of Part III. for details) are not eligible for coverage under this permit, and must be covered under an alternate general permit or under an individual permit.

Stormwater discharges covered by this permit that are subject to ELGs that become effective after this permit is issued, may continue coverage under this permit.

**f. Discharges to Waters Designated as Outstanding waters for Antidegradation Purposes.**

Discharges to receiving waters designated as “outstanding waters” are not eligible for coverage under this permit.

**3. Obtaining and maintaining Authorization under this permit**

**a. Application Requirements**

To obtain authorization for stormwater discharges associated with industrial activities under this permit:

- i) The applicant(s) must meet the eligibility requirements under Parts I.A.1 and I.A.2.
- ii) The applicant(s) must develop a Stormwater Management Plan (SWMP) in accordance with the requirements of Part I.E and Part I.F of this permit prior to submitting an application to the Division.
- iii) The applicant(s) must submit a complete, accurate, and signed permit application, on a form provided by the Division, by mail or hand delivery to the Division at least **90 days** before that facility commences industrial activity, which may result in a discharge of stormwater associated with that industrial activity. The application must be signed in accordance with the requirements of Part I.K (Reporting and Recordkeeping) of this permit. The complete application shall be submitted to:

Colorado Department of Public Health and Environment  
Water Quality Control Division  
Permits Section, WQCD-PCP-B2  
4300 Cherry Creek Drive South  
Denver, CO 80246

- iv) The application must include certification that a SWMP has been completed.
- v) The applicant(s) must receive written notification that the Division granted permit coverage.

**b. Permit Certification Procedures**

Following review of the application or other information, the Division may:

- i) request such additional information as is reasonably necessary to evaluate the discharge;
- ii) delay the authorization to discharge pending further review;
- iii) notify the applicant that additional terms and conditions are necessary;
- iv) provide a compliance schedule in the certification for sector-specific terms and conditions that are new or more stringent than previous conditions;
- v) deny the authorization to discharge under this general permit.

In these instances, the Division will notify the applicant in writing of its request or determination.

**c. Alternative permits**

- i) Division required alternate permit coverage: The Division may require an applicant or permittee to apply for an individual permit or an alternative general permit if it determines the discharge does not fall under the scope of this general permit. In this case, the Division will notify the applicant or permittee that a permit application is required.

- ii) Permittee request for alternate permit coverage: A permittee authorized to discharge stormwater under this permit may request to be excluded from coverage under this general permit by applying for an individual permit. In this case, the permittee must submit an individual application, with reasons supporting the request, to the Division at least 180 days prior to any discharge. When an individual permit is issued, the permittee's authorization to discharge under this permit is terminated on the effective date of the individual permit.

#### **d. Permit Expiration, and Continuation**

Authorization to discharge under this general permit shall expire on **June 30, 2017**. A permittee desiring continued coverage under the general permit must reapply at least **180 days** in advance of this permit expiration. The Division will determine if the permittee may continue to discharge stormwater under the terms of the general permit. An individual permit may be required for any facility not reauthorized to discharge under the reissued general permit.

If this permit is not reissued or replaced prior to the expiration date, it will be administratively continued and remain in force and effect. For permittees that have applied for continued permit coverage, discharges authorized under this permit prior to the expiration date will automatically remain covered by this permit until the earliest of:

- i) An authorization to discharge under a reissued permit, or a replacement of this permit, following the timely and appropriate submittal of a complete application requesting authorization to discharge under the new permit and compliance with the requirements of the new permit; or
- ii) The issuance and effect of a termination issued by the Division; or
- iii) The issuance or denial of an individual permit for the facility's discharges; or
- iv) A formal permit decision by the Division not to reissue this general permit, at which time the Division will identify a reasonable time period for covered dischargers to seek coverage under an alternative general permit or an individual permit. Coverage under this permit will cease when coverage under another permit is granted/authorized; or
- v) The Division has informed the permittee that discharges previously authorized under this permit are no longer covered under this permit.

#### **4. Permit Termination Procedures**

##### **a. Submitting a Notice of Termination request**

To terminate permit coverage, the permittee must submit a complete and accurate Notice of Termination form, signed by the permittee, to the Division at the address listed in Part I.A.3. The permittee's authorization to discharge under this permit terminates as notified by the Division.

A Notice of Termination request that does not meet one or more of the conditions identified in Part I.A.4.b below is not valid. The permittee is responsible for complying with the terms of this permit until notified by the Division that the authorization is terminated.

##### **b. Conditions for a Notice of Termination**

The Division may approve a Notice of Termination request when the permittee meets one of the following conditions:

- i) All permitted stormwater discharges associated with industrial activity that are authorized by this permit cease because the industrial activity has ceased, and no significant materials or industrial pollutants remain exposed to stormwater.

- ii) The permittee has obtained authorization under an individual or alternative general permit for all stormwater discharges associated with industrial activity.
- iii) No Exposure Certification. If the facility authorized to discharge stormwater under this permit becomes eligible for a no exposure exclusion from permitting under 5 CCR 1002-61.3(2)(h), the permittee may submit a complete and accurate No Exposure Certification to the Division at the address listed in Part I.A.3. The Division will terminate permit coverage using information provided in the No Exposure Certification form; the permittee does not need to submit a Notice of Termination.

#### **5. Transfer of Permit Coverage**

Coverage under this general permit may be automatically transferred to a new discharger if all of the following conditions are met:

- a. The permittee (existing discharger) and new discharger submit a complete and accurate Notice of Transfer form, signed by the permittee and the new legal entity, to the Division at the address listed in Part I.A.3, at least 30 days prior to the proposed transfer date. The Notice of Transfer form must contain a specific date for transfer of permit responsibility, coverage, and liability.
- b. The type of industrial activities and practices remain substantially unchanged.
- c. The Division does not notify the permittee of the need to submit a new application for coverage under the general permit or for an individual permit.
- d. The Division does not notify the existing discharger and new discharger of its intent to revoke coverage under the general permit.

### **B. PERMIT COMPLIANCE**

A permittee must comply with all the terms and conditions of this permit. Violation of the terms and conditions specified in this permit may be subject to civil and criminal liability pursuant to sections 25-8-601 through 612, C.R.S.. Correcting a permit violation does not remove the original violation. Failure to take any required corrective actions, as detailed in Part I.J (Corrective Actions), constitutes an independent, additional violation of this permit and may be subject to civil and criminal liability. However, where corrective action is triggered by an event that does not itself constitute permit noncompliance, such as an exceedance of an applicable benchmark, there is no permit violation unless the permittee fails to take the required corrective action within the relevant deadlines established in Part I.J (Corrective Actions).

### **C. CONTROL MEASURES**

All control measures (as defined in Appendix C) used by the permittee to meet the effluent limitations contained in this permit must be selected, designed, installed, implemented, and maintained in accordance with good engineering hydrologic and pollution control practices as defined in Appendix C (Definitions and Abbreviations), and the manufacturer's specifications, when applicable.

The term “**Minimize**”, for purposes of implementing control measures to meet the requirements of Part I.D—Effluent Limitations of this general permit, means reduce and/or eliminate to the extent achievable using control measures that are technologically available and economically practicable and achievable in light of best industry practice.

1. **Installation and implementation specifications**

Installation and implementation specifications for each control measure type used by the permittee to meet the effluent limitations contained in this permit, must be retained with the SWMP (see Part I.F SWMP – Specific SWMP Requirements).

2. **Maintenance of Control Measures and Associated Documentation**

- a. The permittee must maintain all control measures used to achieve the effluent limits required by this permit in effective operating condition (see Part I.D – Effluent Limitations). For this permit, maintenance includes preventative and routine maintenance, modification, repair, replacement, or installation of new control measures. Observations resulting in maintenance activities can be made during a site inspection, or during general observations of site conditions.
- b. Corrective actions associated with maintaining control measures must be conducted with due diligence, as soon as possible after the need is discovered, to achieve the effluent limits required by this permit. The permittee must implement interim control measures to achieve the effluent limits required by this permit while performing maintenance of the primary control measure.
- c. The permittee shall document corrective actions associated with maintaining control measures, in accordance with Part. I.J (Corrective Actions) of this permit, and shall revise the facility SWMP to reflect replacement or installation of new control measures in accordance with Part I.E SWMP (General SWMP Requirements).

**D. EFFLUENT LIMITATIONS**

Effluent limitations contained in this permit include:

- practice-based effluent limits (Part I.D.1);
- numeric effluent limits based on effluent limitations guidelines (Part I.D.2); and,
- water quality-based effluent limitations (Part I.D.3).

All discharges authorized under this permit shall attain these effluent limitations, as applicable to the discharge.

1. **Practice-based Effluent Limitations**

Practice-based limitations required by this permit include the following:

**a. Minimize Exposure**

The permittee must minimize (as defined in Appendix C) the exposure of pollutant sources associated with manufacturing, processing, and material storage areas (including loading and unloading, storage, disposal, cleaning, maintenance, and fueling operations) to rain, snow, snowmelt, and runoff. Minimizing exposure may include locating these industrial materials and activities inside or protecting them with storm resistant coverings.

**b. Good Housekeeping**

The permittee must keep clean all areas exposed to stormwater runoff, as necessary to minimize potential sources of pollutants, using such measures as sweeping at regular intervals, keeping materials orderly and labeled, and storing materials in appropriate containers.

**c. Maintenance of Control Measures**

The permittee must maintain all control measures (structural and non-structural) used to achieve the effluent limits required by this permit in effective operating condition. The permittee must conduct maintenance of control measures in accordance with Part.I.C (Control Measures) of this permit.

**d. Spill Prevention and Response Procedures**

The permittee must minimize the potential for leaks, spills and other releases that may be exposed to stormwater and develop plans for effective response to such potential spills. The permittee must at minimum implement:

- i) Procedures for regularly inspecting, testing, maintaining, and repairing all industrial equipment and systems to avoid situations that may result in leaks, spills, and other releases of pollutants in stormwater discharged to receiving waters.
- ii) Procedures for plainly labeling containers that could be susceptible to spillage or leakage to encourage proper handling and facilitate rapid response if spills or leaks occur;
- iii) Preventative measures such as barriers between material storage and traffic areas, secondary containment provisions, or procedures for material storage and handling;
- iv) Procedures for expeditiously stopping, containing, and cleaning up leaks, spills, and other releases. Employees who may cause, detect, or respond to a spill or leak must be trained in these procedures and have necessary spill response equipment available; and
- v) Procedures for notification of appropriate facility personnel, emergency response agencies, and regulatory agencies. Contact information must be in locations that are readily accessible and available.

**e. Erosion and Sediment Controls**

The permittee must stabilize exposed areas and contain runoff using structural and/or non-structural control measures to minimize onsite erosion and sedimentation, and the resulting discharge of pollutants. Among other actions taken to meet this effluent limit, flow velocity dissipation devices must be placed at discharge locations and within outfall channels where necessary to minimize erosion and/or settle out pollutants.

**f. Management of Runoff**

The permittee must divert, infiltrate, reuse, contain, or treat stormwater runoff, in a manner that minimizes pollutants in stormwater discharges from the site.

**g. Salt Storage Piles or Piles Containing Salt**

The permittee must enclose or cover storage piles of salt, or piles containing salt, used for deicing or other commercial or industrial purposes, including maintenance of paved surfaces, and implement appropriate measures to minimize exposure resulting from adding to or removing materials from the pile. Piles do not need to be enclosed or covered if stormwater runoff from the piles is not discharged or if discharges from the piles are authorized under another permit.

**h. Sector Specific Practice-based Effluent Limits**

The permittee must achieve any additional practice-based limits stipulated in the relevant sector-specific section(s) of Part III.

**i. Employee Training**

The permittee must develop and implement a training program for employees. Training must be conducted at least **annually**, and must address the following, as applicable to the trainee's activities: the site-specific control measures used to achieve the effluent limits in this Part, components and goals of the SWMP, monitoring and inspection procedures, and other applicable requirements of the permit. At a minimum, the following individuals must be trained:

- i) Employee(s) overseeing implementation of, revising, and amending the SWMP.
- ii) Employee(s) performing installation, inspection, maintenance, and repair of control measures.
- iii) Employee(s) who work in areas of industrial activity subject to this permit.

- iv) Employee(s) who conduct stormwater discharge monitoring required by Part.I.H and Part.I.I of this permit.

**j. Non-Stormwater Discharges**

The permittee must eliminate non-stormwater discharges not authorized by a permit, or conducted in accordance with a Division Low Risk Guidance document. See Part I.A.1.b for a list of non-stormwater discharges authorized by this permit.

**k. Waste, Garbage and Floatable Debris**

The permittee must minimize the discharge of waste, garbage, and floatable debris from the site by keeping exposed areas free of such materials or by intercepting them before they are discharged.

**l. Dust Generation and Vehicle Tracking of Industrial Materials.**

The permittee must minimize generation of dust and off-site tracking of raw, final, or waste materials.

**2. Numeric Effluent Limitations based on Effluent Limitations Guidelines**

Discharges from facilities in an industrial category subject to one of the effluent limitations guidelines identified in Part I.A.1, Tables A-1 and A-2 must meet the referenced effluent limits.

**3. Water Quality-Based Effluent Limitations**

**a. Water Quality Standards**

Discharges authorized under this permit must be controlled as necessary to meet applicable water quality standards.

The Division expects that compliance with the other conditions in this permit will control discharges as necessary to meet applicable water quality standards. If at any time the permittee becomes aware, or the Division determines, that the authorized discharge causes or contributes to an exceedance of applicable water quality standards, the permittee must take corrective action as required in Part I.J (Corrective Actions), document the corrective actions as required in Part I.J (Corrective Actions) and Part I.F (SWMP – Specific SWMP Requirements), and report the corrective actions to the Division as required Part I.J (Corrective Actions) and Part I.K (Reporting and Recordkeeping).

If information in the application, required reports, or from other sources indicates that compliance with the other terms and conditions of this permit will not control the discharge as necessary to meet applicable water quality standards, the Division may include a site specific water quality-based effluent limitation in the permit certification, or require the permittee to obtain coverage under an individual permit in accordance with Part I.A.3.c. The Division may include a compliance schedule for any new or revised water quality-based effluent limitation included in a permit certification as appropriate. The Division may also include additional terms and conditions in the permit certification to determine whether compliance with the remaining terms and conditions of the permit will control the discharge as necessary to meet applicable water quality standards, or to monitor compliance with a site-specific water quality-based effluent limitation.

**b. Additional Requirements for Discharges to Water Quality Impaired Waters**

- i) **Existing Discharge to an Impaired Water with an EPA Approved or Established TMDL.** Where a pollutant and applicable water quality standard has been identified, the Division will apply the monitoring requirements of Part I.I.4 in the permit certification.

When the Division determines that compliance with the other terms and conditions of this permit will not control the discharge as necessary to be consistent with the assumptions and requirements of the TMDL, including any wasteload allocation for the facility, the Division will include a site specific water quality-based effluent limitation in accordance with Part I.D.3.a in the permit certification, or inform the

permittee if coverage under an individual permit is necessary in accordance with Part I.A.3.c. The Division may also include additional terms and conditions in the permit certification to determine whether the discharge is consistent with the assumptions and requirements of the TMDL, including any wasteload allocation for the facility and will apply the monitoring.

- ii) **Existing Discharge to an Impaired Water without an EPA Approved or Established TMDL.** Where a pollutant and applicable water quality standard has been identified, the Division will apply the monitoring requirement of Part I.I.4 in the permit certification. Note that this provision also applies to situations where the Division determines that the discharge may need to be controlled as necessary to meet water quality standards in a downstream water segment, even if the discharge is to a receiving water that is not specifically identified on a Section 303(d) list.
- iii) **New Discharge to an Impaired Water.** Where a pollutant and applicable water quality standard has been identified, the Division will make a determination whether the discharge has reasonable potential to cause or contribute to an exceedance of the applicable water quality standard for the identified pollutant. Where reasonable potential is determined, the Division will include a site specific water quality-based effluent limitation in accordance with Part I.D.3.a. The water quality-based effluent limitation will be narrative, and consistent with the following statement:

Discharges authorized under this permit must be controlled as necessary to meet the applicable water quality standard for (*the subject pollutant*) at the point of discharge (end of pipe).

The Division will also apply the monitoring requirements of Part I.I.4 and as appropriate, site-specific benchmarks in accordance with Part I.I.2, in the permit certification.

**c. Additional Requirements for Discharges to Waters Designated as Critical Habitat for Threatened and Endangered Species.**

Where a pollutant and applicable water quality standard has been identified, the Division will apply the monitoring requirements of Part I.I.4 in the permit certification. The Division may also include additional terms and conditions in the permit certification to determine whether compliance with the remaining terms and conditions of the permit will control the discharge as necessary to eliminate or minimize the potential for no more than minor detrimental effects to listed species in regards to receiving water mixing (October 2005 Memorandum of Agreement (MOA) entered into by the Division, EPA, and USFWS).

**d. Additional Requirements for New or Increased Discharges to Reviewable Waters**

If the Division determines that compliance with the other terms and conditions of this permit will not control the discharge as necessary to be consistent with the applicable antidegradation requirements, the Division may include additional terms and conditions in accordance with Part I.D.3.a in the permit certification, or inform the permittee if coverage under an individual permit is necessary in accordance with Part I.A.3.c.

**E. STORMWATER MANAGEMENT PLAN (SWMP)—General SWMP Requirements**

The General SWMP requirements contained in this section address administrative requirements of the SWMP, as opposed to the specific SWMP content requirements provided in Part I.F of the permit.

**An existing permittee authorized under the previous versions of this permit shall modify the existing SWMP to comply with the requirements of this permit by January 29, 2013.**

- 1. **SWMP requirement:** The permittee must develop, implement, and maintain a SWMP for each facility authorized by this permit. The SWMP shall be prepared in accordance with good engineering, hydrologic and pollution control practices (the SWMP need not be prepared by a registered engineer). The permittee must modify the SWMP to reflect current site conditions (see Part I.E.7 below).

- 
2. Preparation, Submission and Implementation: The permittee must complete a SWMP prior to submitting the permit application for authorization to discharge industrial stormwater from a facility, and submit it to the Division if requested. The permittee must implement the SWMP when the facility begins industrial activities, which includes installation of control measures.
  3. Signatory Requirements: The permittee must sign and certify all SWMPs in accordance with Part I.K (Reports and Recordkeeping); this requirement applies to the original SWMP prepared for the facility, **and** each time the permittee modifies a SWMP as required by Part I.E.7.a and b below.
  4. Permit Retention: The permittee must maintain a copy of this permit and the permit certification issued to the permittee with the SWMP.
  5. SWMP Retention: The permittee must retain a copy of the SWMP at the facility unless another location, specified by the permittee, is approved by the Division.
  6. Consistency with Other Plans: The permittee may incorporate, by reference, applicable portions of plans prepared for other purposes at their facility. Plans or portions of plans incorporated by reference into a SWMP become enforceable requirements of this permit and must be available along with the SWMP as required in Part I.E.5 above.
  7. Required SWMP Modifications:
    - a. *Division initiated*:
      - i) The permittee must modify the SWMP when notified by the Division that it does not meet one or more of the requirements of this permit. Unless otherwise provided by the Division, the permittee shall have 30 days after notification to make the necessary changes to the SWMP and implement them.
      - ii) The Division may require the permittee to submit the modified SWMP to the Division.
      - iii) If the Division determines that the permittee's stormwater discharges do not, or may not, achieve the effluent limits required by this permit, the Division may require the permittee, within a specified time period, to develop and implement a supplemental control measure action plan, which describes additional SWMP modifications to adequately address the identified water quality concerns.
    - b. *Permittee initiated*:
      - i) The permittee must modify the SWMP whenever necessary to address any of the triggering conditions for corrective action in Part I.J (Corrective Actions) to ensure that they do not reoccur.
      - ii) The permittee must modify the SWMP whenever there is a change in design, construction, operation, or maintenance at the facility that significantly changes the nature of pollutants discharged in stormwater from the facility, significantly increases the quantity of pollutants discharged, or that requires the permittee to implement new or modified control measures.
      - iii) The SWMP modifications may include a schedule for control measure design and implementation, provided that interim control measures needed to comply with the permit are documented in the SWMP and implemented during the design period.
      - iv) The permittee must make all SWMP modifications in accordance with the corrective action deadlines in Part I.J (Corrective Actions).
  8. Sector-specific requirements: The SWMP shall include any additional sector-specific requirements outlined in Part III.

## **F. STORMWATER MANAGEMENT PLAN (SWMP)—Specific SWMP Requirements**

The SWMP shall contain the **ten elements** described in this section.

### **1. SWMP Administrator**

The SWMP shall identify a specific individual(s) by name or by title whose responsibilities include: SWMP development, implementation, maintenance, and modification.

### **2. Facility Description**

The facility description shall include:

- a. A narrative description of the industrial activities conducted at the facility;
- b. The total size of the facility property in acres;
- c. The general layout of the facility including buildings and storage of raw materials, and the flow of goods and materials through the facility.

### **3. Facility Map**

The SWMP shall include a legible site map(s), showing the entire facility, and vicinity as appropriate, identifying:

- a. The location of the facility in relation to surface waters that receive industrial stormwater discharges from the facility (including the name of the surface water; if the name is not known, indicate that on the map); a separate vicinity map may be necessary to comply with this requirement;
- b. Location of significant impervious surfaces within the facility property boundaries, including paved areas and buildings;
- c. The locations of all facility stormwater conveyances including ditches, pipes, and swales;
- d. The locations of stormwater inlets and outfalls, with a unique identification code for each outfall (e.g., Outfall No. 1, No. 2, etc), and indicating whether one or more outfalls are “substantially identical” under Part I.H (General Monitoring Requirements); and an approximate outline of the areas draining to each outfall;
- e. Directions of stormwater flow indicated by arrows;
- f. The areas where industrial activities are conducted, where such activities are exposed to precipitation;
- g. Locations of all pollutant sources (actual or potential) associated with specific industrial activities as identified under Part I.F.4;
- h. Location of all structural and applicable non-structural control measures used to meet the effluent limits required by this permit;
- i. Locations where significant spills or leaks identified under Part I.F.4.b have occurred;
- j. Locations of all stormwater monitoring points applicable to the facility (visual monitoring; benchmark monitoring, numeric effluent monitoring, water quality-based monitoring);

- k. Location and description of any non-stormwater discharges authorized in Part I.A.1.b., emergency fire fighting discharges authorized in Part I.A.1.c, or authorized by separate permit coverage.
- l. Locations and sources of run-on to the facility from adjacent property that contains significant quantities of pollutants.

4. **Facility Inventory and Assessment of Pollutant Sources**

The facility inventory and assessment shall include the following:

**a. Inventory of facility activities and equipment**

The inventory shall identify all areas (except interior areas that are not exposed to precipitation) associated with industrial activities that have been, or may potentially be, sources of pollutants, that contribute, or have the potential to contribute, any pollutants to stormwater, including but not limited to the following:

- i) Loading and unloading of materials, including solids and liquids.
- ii) Outdoor storage of materials or products, including solids and liquids.
- iii) Outdoor manufacturing and processing.
- iv) On-site dust or particulate generating processes, including dust collection devices and vents.
- v) On-site waste treatment, storage, or disposal, including waste ponds and solid waste management units.
- vi) Vehicle and equipment fueling, maintenance, and/or cleaning (includes washing).
- vii) Immediate access roads and rail lines used or traveled by carriers of raw materials, manufactured products, waste material, or by-products used or created by the facility.
- viii) Roofs or other surfaces exposed to air emissions from a manufacturing building or a process area.
- ix) Roofs and associated surfaces composed of galvanized materials that may be mobilized by stormwater (e.g., roofs, ducts, heating/air conditioning equipment, gutters and downspouts).

**b. Inventory of materials**

The inventory shall list materials that contribute, or have the potential to contribute, pollutants to stormwater, including but not limited to the following:

- i) The types of materials handled at the facility that may be exposed to precipitation or runoff and could result in stormwater pollution.
- ii) The types of materials handled at the facility that may leak or spill, and be exposed to precipitation or runoff and result in stormwater pollution.
- iii) A narrative description of any potential sources of pollutants from past activities, materials and spills that could contribute pollutants to stormwater discharges, and the corresponding outfall(s) that would be affected by such spills and leaks. The description shall include the method and location of any on-site storage or disposal; and documentation of all significant spills and leaks of oil or toxic or hazardous pollutants that occurred at exposed areas, or that drained to a stormwater conveyance, in the 3 years prior to the SWMP preparation date.

**c. Assessment of potential pollutant sources**

The assessment of potential pollutant sources shall provide a short narrative or tabulation describing the potential of a pollutant to be present in stormwater discharges for each facility activity, equipment and material identified above. The permittee shall update this narrative when data become available to verify the presence or absence of these pollutants.

**5. Description of Control Measures**

- a. The permittee shall document the location and type of each non-structural and structural control measure implemented at the facility to achieve meet the effluent limitations contained in this permit and listed below. Documentation must include those control measures implemented for stormwater run-on that commingles with any discharges covered under this permit.
  - i) The practice-based limitations required by Part I.D.1 and Part III of this permit.
  - ii) All applicable effluent limitations guidelines-based limits (Part I.A.1, Tables A-1 and A-2) required by this permit.
  - iii) The water quality-based effluent limits (Part I.D.3) required by this permit.
- b. Installation and implementation specifications for each control measure used by the permittee to meet the effluent limitations contained in this permit must be retained with the SWMP.

**6. Additional Control Measure Requirements**

The permittee shall document the schedules, procedures, and evaluation results for the following subset of practice-based effluent limitations.

- a. Good Housekeeping (see Part I.D.1.b) – A schedule for regular pickup and disposal of waste materials, along with routine inspections for leaks and conditions of drums, tanks and containers.
- b. Maintenance (see Part I.D.1.c) – Preventative maintenance schedules for industrial equipment and systems; control measures; and any back-up practices in place should a runoff event occur while a control measure is off-line.
- c. Spill Prevention and Response Procedures (see Part I.D.1.d) – Procedures for preventing, responding to, and reporting spills and leaks. The permittee may reference other plans (e.g., a Spill Prevention Control and Countermeasure (SPCC) plan) otherwise required by a permit for the facility, provided that a copy of the other plan is kept onsite with the SWMP, and made available for review consistent with Part I.E (SWMP—General SWMP Requirements).
- d. Employee Training (see Part I.D.1.i) – A schedule for all types of training required by this permit, content of the training, and log of the dates on which specific employees received training.
- e. Non-Stormwater Discharges (see Part I.D.1.j) – Documentation of the stormwater conveyance system evaluation for the presence of non-stormwater discharges not authorized in Part.I.A.1.b, and the elimination of all unauthorized discharges. Documentation of the evaluation must include:
  - i) The date of any evaluation;
  - ii) A description of the evaluation criteria used;
  - iii) A list of the outfalls or onsite drainage points that were directly observed during the evaluation;
  - iv) The different types of non-stormwater discharge(s) and source locations; and
  - v) The action(s) taken, such as a list of control measures used to eliminate unauthorized discharge(s), if any were identified.

## **7. Inspection Procedures and Documentation**

The permittee shall document inspection procedures, and maintain such procedures and other documentation with the SWMP, as follows:

- a. The permittee shall document procedures for performing the facility inspections required by Part I.G (Inspections) of the permit. Procedures must identify:
  - i) Person(s) or positions of person(s) responsible for inspection;
  - ii) Schedules for conducting inspections, including tentative schedule for facilities in climates with irregular stormwater runoff discharges; and
  - iii) Specific items to be covered by the inspection, including inspection schedules for specific outfalls.
- b. The permittee shall maintain inspection documentation with the SWMP as required by Part I.G (Inspections) of this permit.
- c. Permittees that invoke the exception to monthly inspections for inactive and unstaffed facilities must include in the SWMP the signed and certified documentation to support this claim as required Part I.G (Inspections).

## **8. Monitoring Procedures and Documentation**

The permittee shall document monitoring procedures, and maintain such procedures and other documentation with the SWMP, as follows:

- a. The permittee shall document procedures for performing the five types of monitoring required by Part I.I (Specific Monitoring Requirements) of the permit, where applicable to the facility, including:
  - Visual assessment monitoring (see Part I.I.1)
  - Benchmark monitoring (see Part I.I.2)
  - Effluent limitations guidelines monitoring (see Part I.I.3);
  - Impaired waters monitoring (see Part I.I.4); and
  - Additional monitoring as required by the Division (see Part I.I.5).
- b. For each type of monitoring, procedures must identify:
  - i) Locations where samples are collected, and outfall identification by its unique identifying number;
  - ii) Staff responsible for conducting stormwater sampling;
  - iii) Procedures for sample collection and handling, including any deviations from sampling within the first 30 minutes of a measurable storm event (see Part I.H.6);
  - iv) Parameters for analysis, holding times and preservatives, analytical methods, and laboratory quantitation levels;
  - v) Procedures for sending samples to a laboratory;
  - vi) Monitoring schedules, including any deviations from the monitoring schedule for alternate monitoring periods for climates with irregular stormwater runoff (see Part I.H.9);
  - vii) The numeric control values (benchmarks, effluent limitations guidelines, TMDL-related requirements, or other requirements) applicable to discharges from each outfall.
- c. Permittees must maintain Quarterly Visual Assessment documentation (see Part I.I.1.c) with the SWMP.
- d. Permittees that invoke the monitoring exceptions for inactive and unstaffed facilities must include in the SWMP the signed and certified documentation to support this claim as required by Part I.H.13.
- e. Permittees that use the substantially identical outfall monitoring exception (Part I.H.3) must document the following in the SWMP:
  - i) Location of each of the substantially identical outfalls, and the outfall sampled;

- ii) Description of the general industrial activities conducted in the drainage area of each outfall;
- iii) Description of the control measures implemented in the drainage area of each outfall;
- iv) Description of the exposed materials located in the drainage area of each outfall that are likely to be significant contributors of pollutants to stormwater discharges;
- v) Impervious surfaces in the drainage area that could affect the percolation of stormwater runoff into the ground (e.g., asphalt, crushed rock, grass, etc.);
- vi) Why the permittee expects the outfalls to discharge substantially identical effluents.

#### 9. **Corrective Action Documentation**

The permittee must maintain a copy of all Corrective Action reports that document corrective actions taken by the permittee consistent with Part I.J (Corrective Actions) of this permit, with the facility SWMP.

#### 10. **Natural Background Pollutant Levels**

The permittee must maintain the following documentation with the SWMP:

- a. findings that any benchmark exceedances were due to natural background pollutant levels and,
- b. documentation to support any determination that pollutants of concern are not expected to be present above natural background levels if the permittee discharges directly to impaired waters, and that such pollutants were not detected in the facility discharge or were solely attributable to natural background sources (see Part I.I.4.c).

### **G. INSPECTIONS**

#### 1. **Inspection Frequency and Personnel**

- a. The permittee shall conduct and document visual inspections of the facility at least **quarterly** (i.e., once each calendar quarter). Inspections shall be conducted at least 20 days apart.
- b. The permittee shall conduct a minimum of one (1) inspection per calendar year during a runoff event, which for a rain event means during, or within 24 hours after the end of, a measureable storm event (as defined in Appendix C); and for a snowmelt event, means at a time when a measurable discharge occurs from the facility.
- c. The permittee shall ensure that inspections are conducted by qualified personnel.

#### 2. **Inspection Scope**

Each inspection shall include:

- a. Observations made at stormwater sampling locations and areas where stormwater associated with industrial activity is discharged off-site; or discharged to waters of the state, or to a storm sewer system that drains to waters of the state.
- b. Observations for the presence of floating materials, visible oil sheen, discoloration, turbidity, odor, etc. in the stormwater discharge(s).
- c. Observations of the condition of and around stormwater outfalls, including flow dissipation measures to prevent scouring.

- d. Observations for the presence of illicit discharges or other non-permitted discharges such as domestic wastewater, noncontact cooling water, or process wastewater (including leachate).
- e. A verification that the descriptions of potential pollutant sources required under this permit are accurate.
- f. A verification that the site map in the SWMP reflects current conditions.
- g. An assessment of all control measures used to comply with the effluent limits contained in this permit, noting all of the following:
  - i) Effectiveness of control measures inspected.
  - ii) Locations of control measures that need maintenance or repair.
  - iii) Reason maintenance or repair is needed and a schedule for maintenance or repair.
  - iv) Locations where additional or different control measures are needed and the rationale for the additional or different control measures.

### 3. **Inspection Documentation**

The permittee shall document the findings for each inspection in an inspection report or checklist, and keep the record onsite with the facility SWMP. The permittee shall ensure each inspection report documents the observations, verifications and assessments required in Part I.G.2 above, and additionally includes:

- a. The inspection date and time;
- b. Locations inspected;
- c. Weather information and a description of any discharges occurring at the time of the inspection;
- d. A statement that, in the judgment of 1) the person conducting the site inspection, and 2) the person described in Part I.K.6 (Reports and Recordkeeping), the site is either in compliance or out of compliance with the terms and conditions of this permit, with respect to Part I.G.2 (Inspection Scope);
- e. A summary report and a schedule of implementation of the corrective actions that the permittee has taken or plans to take if the site inspection indicates that the site is out of compliance;
- f. Name, title, and signature of the person conducting site inspection; and the following statement: "I certify that this report is true, accurate, and complete, to the best of my knowledge and belief.";
- g. Certification and signature of the person described in Part I.K.6 (Reports and Recordkeeping), or a duly authorized representative of the facility thereof.

### 4. **Exception to Inspection Frequency for Inactive and Unstaffed Sites that meet the condition of no exposure**

The requirement that permittees conduct and document quarterly visual inspections of the facility, and conduct at least one (1) inspection per calendar year during a runoff event, does not apply at a facility that is inactive and unstaffed, as long as a **condition of no exposure exists at its facility**, i.e., there are no industrial materials or activities exposed to stormwater. Such facilities are required to conduct two site inspections annually, in the spring and fall, in accordance with the requirements of this Part.

To invoke this exception, a permittee must maintain a statement in the facility SWMP pursuant to Part I.F.7 indicating that the site is inactive and unstaffed, and that there are no industrial materials or activities exposed to precipitation, in

accordance with the substantive requirements in 5 CCR 1002-61.3(2)(h). The statement must be signed and certified in accordance with Part I.K.6 (Reports and Recordkeeping).

If conditions change and industrial materials or activities become exposed to stormwater or the facility becomes active and/or staffed, this exception no longer applies and the permittee must **immediately** resume quarterly inspections.

**5. Non-Compliance discovered during inspection**

Any corrective action required as a result of a facility inspection must be performed consistent with Part I.J (Corrective Actions) of this permit, and retained with the SWMP.

**H. GENERAL MONITORING REQUIREMENTS**

All permittees must collect and analyze stormwater samples and document monitoring activities consistent with the procedures described in Part I.I and any additional sector-specific requirements in Part III. The results of such monitoring shall be reported on the Discharge Monitoring Report form (see Part I.K – Reporting and Recordkeeping), to include reporting “No Discharge” on the DMR if no discharge occurs within the reporting period, and other reporting conventions consistent with Part I.K reporting requirements.

**1. Monitored Outfalls**

Applicable monitoring requirements apply to each outfall authorized by this permit, except as otherwise exempt from monitoring as a “substantially identical outfall.”

**2. Representative Sampling**

Samples and measurements taken as required herein shall be representative of the nature of the monitored discharge.

**3. Substantially Identical Outfalls**

- a. When a facility has two or more outfalls that, based on a consideration of features (e.g. grass vs. pavement, slopes, catch basins vs. swales) and activities within the area drained by the outfall, the permittee reasonably believes discharge substantially identical effluents, the permittee may monitor the effluent of one such outfall and report that the results also apply to the substantially identical outfalls.
  - i) For visual assessments (Part I.I.1—Specific Monitoring Requirements), this provision only applies provided that visual assessments are rotated between each substantially identical outfall throughout the period of the permittees coverage under this permit.
- b. As required in Part I.F.8, the SWMP must describe the rationale for any substantially identical outfall determinations.

**4. Measurable Storm Events.**

- a. Rain event. Permittees must conduct all required monitoring on a storm event that results in an actual discharge from the facility (“measurable storm event”), and that follows the preceding measurable storm event by at least 72 hours (3 days).
- b. Snowmelt event. The permittee must conduct snowmelt monitoring at a time when a measurable discharge occurs from the facility.

**5. Storm Event Information**

- a. Rain event. The permittee must document the information below for each monitored event. Such documentation is not required for events that do not meet the criteria in Part I.H.4, or that are not monitored to meet the requirements of this permit.
  - i) The date, time of the start of the discharge, time of sampling, duration (in hours) of the rainfall event, and magnitude (in inches) of the storm event sampled;
  - ii) The duration between the storm event sampled and the end of the most recent storm event that produced a discharge.
- b. Snowmelt monitoring. The permittee must document the date of the sampling event for each monitored snowmelt event.

**6. Sample Type and Requirements**

- a. Grab samples shall be used for all monitoring and shall not be combined.
- b. Permittees must take a minimum of one grab sample from a discharge resulting from a measurable storm event.
- c. Grab samples must be collected within the first 30 minutes of a measurable storm event (see Part I.H.4). If it is not possible to collect the sample within the first 30 minutes of a measurable storm event, the sample must be collected as soon as practicable after the first 30 minutes, and documentation must be kept with the SWMP explaining why it was not possible to take samples within the first 30 minutes.
- d. In the case of snowmelt, samples must be taken during a period with a measurable discharge.
- e. All discharge samples at a facility must be taken during the same storm event, if feasible.

**7. Analytical Requirements**

All sampling shall be performed by the permittee according to specified methods in 40 CFR Part 136; methods approved by EPA pursuant to 40 CFR Part 136; or methods approved by the Division, in the absence of a method specified in or approved pursuant to 40 CFR Part 136.

- a. If the permit contains a numeric effluent limit for a parameter, the analytical method and PQL selected for all monitoring conducted in accordance with this permit for that parameter shall be the one that can measure at or below the numeric effluent limit. If all specified analytical methods and corresponding PQLs are greater than the numeric effluent limit, then the analytical method with the lowest PQL shall be used.
- b. If the permit contains a report only requirement for a parameter, the analytical method and PQL chosen shall be one that can measure at or below the benchmark, or water quality standard, or other level approved by the Division. If all analytical methods and corresponding PQLs are greater than the benchmark, or water quality standard, or other level, then the analytical method with the lowest PQL shall be used.
- c. If the permit contains an interim effluent limitation (a limit is report until such time as a numeric effluent limit becomes effective) for a parameter, the analytical method and PQL chosen for all monitoring conducted in accordance with this permit for the parameter shall be one that can measure to the final numeric effluent limit. If all analytical methods and corresponding PQLs are greater than the final numeric effluent limit (s), then the analytical method with the lowest PQL shall be used.

- d. For parameters such as TIN, the analytical methods chosen shall be those that can measure to the potential or final numeric effluent limit, based on the sum of the PQLs for nitrate, nitrite and ammonia.
- e. When the analytical method which complies with the above requirements has a PQL greater than the permit limit, and the permittee's analytical result is less than the PQL, the permittee shall report "BDL" on the DMR. Such reports will not be considered as violations of the permit limit, as long as the lowest available PQL is used for the analysis. When the analytical method which complies with the above requirements has a PQL that is equal to or less than the permit limitation, and the permittee's analytical result is less than the PQL, "< X" (where X = the actual PQL achieved by the laboratory) shall be reported on the DMR. For parameters that have a report only limitation, and the permittee's analytical result is less than the PQL, "< X" (where X = the actual PQL achieved by the laboratory) shall be reported on the DMR.
- f. In the calculation of average concentrations (i.e. 7- day average, 30-day average, 2-year rolling average) any individual analytical result that is less than the PQL shall be considered to be zero for the calculation purposes. When reporting:

If all individual analytical results are less than the PQL, the permittee shall report either "BDL" or "<X" (where X = the actual PQL achieved by the laboratory), following the guidance above.

If one or more individual results is greater than the PQL, an average shall be calculated and reported. Note that it does not matter if the final calculated average is greater or less than the PQL, it must be reported as a value.

Note that when calculating T.I.N. for a single sampling event, any value less than the PQL (for total ammonia, total nitrite, or total nitrate) shall be treated as zero. The T.I.N. concentration for a single sampling event shall then be determined as the sum of the analytical results (zeros if applicable) of same day sampling for total ammonia and total nitrite and total nitrate. From these calculated T.I.N. concentrations, the daily maximum and thirty day average concentrations shall be calculated and must be reported as a value.

- g. The present lowest PQLs for specific parameters, as determined by the State Laboratory (November 2008) are provided below. If the analytical method cannot achieve a PQL that is less than or equal to the permit limit, then the method, or a more precise method, must achieve a PQL that is less than or equal to the PQL in the Table H-1 below. A listing of the PQLs for organic parameters that must meet the above requirement can be found in the Division's Practical Quantitation Limitation Guidance Document, July 2008.

For nonylphenol, until such time as there is an EPA 40 CFR Part 136 method, the State is approving use of ASTM Methods D7065 and D7485. Until a statewide PQL has been developed, the permittee shall use either the default PQLs listed in the table below, or develop their own site-specific PQL in accordance with the Practical Quantitation Limitation Guidance Document (July 2008) for Organic Parameters. This document is available on the Division's website at [www.coloradowaterpermits.com](http://www.coloradowaterpermits.com). The delayed effective date for the monitoring requirement allows time for the permittee to develop a site-specific PQL.

These limits apply to the total recoverable or the potentially dissolved fraction of metals.

For hexavalent chromium, samples must be unacidified so dissolved concentrations will be measured rather than potentially dissolved concentrations.

<b>Parameter</b>	<b>PQLs</b>	<b>Parameter</b>	<b>PQLs</b>
Aluminum	50 µg/l	Mercury	0.1 µg/l
Ammonia	1 mg/l	Mercury (low-level)	0.003 µg/l
Arsenic	1 µg/l	Nickel	50 µg/l
Barium	5 µg/l	N-Ammonia	50 µg/l
Beryllium	1 µg/l	N Nitrate/Nitrite	0.5 mg/l
BOD / CBOD	1 mg/l	N-Nitrate	50 µg/l
Boron	50 µg/l	N-Nitrite	10 µg/l
Cadmium	1 µg/l	Total Nitrogen	0.5 mg/l
Calcium	20 µg/l	Phenols	100 µg/l
Chloride	2 mg/l	Phosphorus	10 µg/l
Chlorine	0.1 mg/l	Radium 226	1 pCi/l
Total Residual Chlorine		Radium 228	1 pCi/l
DPD colorimetric	0.10 mg/l	Selenium	1 µg/l
Amperometric titration	0.05 mg/l	Silver	0.5 µg/l
Chromium	20 µg/l	Sodium	0.2 mg/l
Chromium, Hexavalent	20 µg/l	Sulfate	5 mg/l
Copper	5 µg/l	Sulfide	0.2 mg/l
Cyanide (Direct / Distilled)	10 µg/l	Total Dissolved Solids	10 mg/l
Cyanide, WAD+A47	5 µg/l	Total Suspended Solids	10 mg/l
Fluoride	0.1 mg/l	Thallium	1 µg/l
Iron	10 µg/l	Uranium	1 µg/l
Lead	1 µg/l	Zinc	10 µg/l
Magnesium	20 µg/l	Nonylphenol D7065	10 µg/l
Manganese	2 µg/l	Nonylphenol D7485	0.33 µg/l

## 8. Adverse Weather Conditions

When adverse weather conditions prevent sample collection according to the relevant monitoring schedule, the permittee must take a substitute sample during the next qualifying storm event. Adverse conditions are those that are dangerous or create inaccessibility for personnel, such as local flooding, high winds, or electrical storms.

Adverse weather does not exempt the permittee from having to file timely DMRs. The permittee must report any failure to monitor and indicate the basis for not sampling during the usual reporting period.

## 9. Climates with Irregular Stormwater Runoff

- If a facility is located in an area where limited rainfall occurs during parts of the year, or in areas where freezing conditions exist that prevent runoff from occurring for extended periods, consistent with Part I.H.11 of this permit, the required monitoring events may be distributed during seasons when precipitation occurs, or when snowmelt results in a measurable discharge from the facility.
- The permittee must still collect the required number of samples.
- The permittee must maintain the revised monitoring schedule with the facility's SWMP as specified in Part I.F.8.

## 10. Monitoring Periods

Monitoring requirements in this permit begin in the first full quarter following **July 1, 2012** or the date of discharge authorization, whichever date comes later. Quarterly monitoring must be conducted at least once in each of the following 3-month intervals:

- January 1 – March 31;
- April 1 – June 30;
- July 1 – September 30; and
- October 1 – December 31.

This monitoring schedule may be modified in accordance with Part I.H.11 below; the revised schedule must be documented with the facility SWMP.

#### **11. Changes to Monitoring Requirements and Additional Monitoring**

A permittee may request that the Division modify permit certification monitoring conditions, (i.e., monitoring parameters and frequency, and sample type). A justification for such modifications must accompany the request.

If the permittee, using an approved analytical method, monitors any parameter more frequently than required by this permit, then the results of such monitoring shall be included in the calculation and reporting of the values required in the Discharge Monitoring Report Form (DMRs) or other forms as required by the Division. Such increased frequency shall also be indicated.

#### **12. Monitoring for Allowable Non-Stormwater Discharges**

A permittee is only required to monitor allowable non-stormwater discharges (as delineated in Part I.A.1.b) when they are commingled with stormwater discharges associated with industrial activity.

#### **13. Monitoring Exceptions for Inactive and Unstaffed Sites that meet the condition of no exposure**

The requirement that permittees conduct and document quarterly visual assessments, benchmark sampling, ELG or water quality standards monitoring of stormwater discharges from the facility does not apply at a facility that is inactive and unstaffed, as long as a **condition of no exposure exists at its facility**, i.e., there are no industrial materials or activities exposed to stormwater.

- a. To invoke this exception, a permittee must maintain a statement in the facility SWMP pursuant to Part I.F.8 indicating that the site is inactive and unstaffed, and that there are no industrial materials or activities exposed to precipitation, in accordance with the substantive requirements in 5 CCR 1002-61.3(2)(h). The statement must be signed and certified in accordance with Part I.K (Reports and Recordkeeping). DMR reporting shall be consistent with Part I.K.1 of this permit.
- b. If conditions change and industrial materials or activities become exposed to stormwater or the facility becomes active and/or staffed, this exception no longer applies and the permittee must **immediately** resume quarterly visual assessments and benchmark sampling.

### **I. SPECIFIC MONITORING REQUIREMENTS: Visual, Benchmark, Effluent Limitation Guideline, Water Quality Standards Monitoring, and Additional Monitoring**

This permit includes five types of required monitoring, one or more of which may apply to the discharge authorized by this permit, **as identified in the permit certification for the permitted facility**.

When more than one type of monitoring for the same parameter at the same outfall applies (e.g., total suspended solids once per year for an effluent limit and once per quarter for benchmark monitoring at a given outfall), the permittee may use a single sample to satisfy both monitoring requirements (i.e., one sample satisfying both the annual effluent limit sample and one of the 4 quarterly benchmark monitoring samples).

## 1. Visual Monitoring

Once each **quarter** for the entire permit term, the permittee must collect a stormwater sample from each outfall (or a substantially identical outfall pursuant to Part I.H.3 above) and conduct a visual assessment of each of these samples.

- a. These samples should be collected in such a manner that the samples are representative of the stormwater discharge.
- b. The visual assessment must be made of a sample in a clean, clear glass, or plastic container, and examined in a well-lit area. The permittee must visually inspect the sample for the presence of the following water quality characteristics:
  - i) Color;
  - ii) Odor;
  - iii) Clarity;
  - iv) Floating solids;
  - v) Settled solids;
  - vi) Suspended solids;
  - vii) Foam;
  - viii) Oil sheen; and
  - ix) Other obvious indicators of stormwater pollution.
- c. Quarterly Visual Assessment Documentation. The permittee must document the visual assessment results and maintain this documentation onsite with the facility SWMP as required in Part I.F.8. The permittee is not required to submit visual assessment findings to the Division, unless specifically requested to do so. At a minimum, visual assessment documentation of the must include:
  - i) Sample location(s);
  - ii) Sample collection date and time, and visual assessment date and time for each sample;
  - iii) Personnel collecting the sample and performing visual assessment, and their signatures;
  - iv) Nature of the discharge (i.e., runoff or snowmelt);
  - v) Results of observations of the stormwater discharge;
  - vi) Probable sources of any observed stormwater contamination; and
  - vii) If applicable, why it was not possible to take samples within the first 30 minutes.
- d. Quarterly Visual Assessment Corrective Actions. If the visual assessment indicates the control measures for the facility are inadequate or are not being properly operated and maintained, the permittee must conduct corrective actions consistent with Part I.J (Corrective Actions) of this permit.
- e. The permittee shall maintain visual monitoring procedures in the SWMP as required in Part I.F.8.

## 2. Benchmark Monitoring

This permit provides pollutant benchmark concentrations that may be applicable to the discharge authorized by this permit. The benchmark concentrations are not effluent limitations; a benchmark exceedance, therefore, is not a permit violation. When the discharge exceeds an applicable benchmark concentration, the permittee must conduct corrective actions consistent Part I.J (Corrective Actions) of this permit. Failure to respond to benchmark value exceedances is a violation of the permit.

### **a. Applicability of Benchmark Monitoring**

The permittee shall monitor at each benchmark sampling location for each benchmark parameter(s) specified for the primary industrial activity, and any co-located industrial activities, applicable to the facility discharge. Industry-specific benchmark concentrations are listed in the sector-specific sections of Part III. The Division may

also include a site specific benchmark in a permit certification as appropriate to ensure that compliance with the other terms and conditions of the permit will control discharges as necessary to meet water quality based effluent limitations contained in Part I.D.3.a of the permit.

**b. Benchmark Monitoring Schedule**

Benchmark monitoring must be conducted **quarterly**, as identified in Part I.H.9, for the first **4** full quarters of permit coverage. Exceptions to this schedule include:

- i) Permittees at facilities in climates with irregular stormwater runoff may request a modification of this quarterly schedule as specified in Part I.H.11 of this permit.

**c. Averaging monitoring values**

Permittees must calculate average concentrations in accordance with the requirements of Part I.H.7.g of this permit.

**d. Benchmark Monitoring Actions – *Data not exceeding benchmarks***

After collecting **4** benchmark samples, if the average of the monitoring values for any parameter, at a specific outfall, does not exceed the benchmark, the permittee may reduce benchmark monitoring frequency for that parameter to **once-per-year**, rotating through the monitoring periods provided in Part I.H.9, such that **8** samples are collected every five years. DMR reporting shall be consistent with Part I.K.1 of this permit.

**e. Benchmark Monitoring Actions – *Data exceeding benchmarks***

- i) If the averaged monitoring values for any parameter, at a specific outfall, exceeds the benchmark, as described in a) through c) below, the permittee must conduct corrective action in accordance with Part I.J—Corrective Actions of this permit.
  - a) The average of the initial **4** quarterly sample monitoring values for any parameter exceeds the benchmark.
  - b) If less than **4** benchmark samples have been taken, but the sum of the quarterly sample results to date is more than **4** times the benchmark level (i.e., an exceedance of the **4** quarter average is mathematically certain ), this is considered a benchmark exceedance.
  - c) If any of the annual samples taken after the first **4** quarterly samples (i.e., samples **5** through **8**), when averaged with the proceeding samples, causes an average monitoring value that exceeds the benchmark for any parameter, this is considered a benchmark exceedance.
- ii) Following control measure(s) modification, the permittee must continue **quarterly** monitoring for **4** additional quarters. For this monitoring:
  - a) If the average of the monitoring values for any parameter does not exceed the benchmark, the permittee may monitor once-per-year as described in Part I.I.2.d, above.
  - b) If the average of the monitoring values for any parameter still exceeds the benchmark (or if an exceedance of the benchmark by the 4 quarter average is mathematically certain prior to conducting the full 4 additional quarters of monitoring), the permittee must again conduct corrective actions consistent with Part I.J (Corrective actions) of this permit unless the Division waives the requirement for additional monitoring and corrective action.

**f. Natural background pollutant levels**

Following the first 4 quarters of benchmark monitoring (or sooner if the exceedance is triggered by less than 4 quarters of data, see above), if the average concentration of a pollutant exceeds a benchmark value, and the permittee determines that exceedance of the benchmark is attributable solely to the presence of that pollutant in

the natural background, the permittee is not required to perform corrective action or additional benchmark monitoring provided that:

- i) The average concentration of the benchmark monitoring results is less than or equal to the concentration of that pollutant in the natural background;
- ii) The permittee documents and maintains with the SWMP supporting rationale for concluding that benchmark exceedances are in fact attributable solely to natural background pollutant levels. The permittee must include in the supporting rationale any data previously collected by the permittee or others (including literature studies) that describe the levels of natural background pollutants in the facility stormwater discharge; and
- iii) The permittee notifies the Division that the benchmark exceedances are attributable solely to natural background pollutant. DMR reporting shall be consistent with Part I.K. of this permit.

Natural background pollutants include those substances that are naturally occurring in soils. Natural background pollutants **do not** include legacy pollutants from earlier activity on the site, or pollutants in run-on from neighboring sources which are not naturally occurring.

### 3. **Effluent Limitations Guidelines (ELG) Monitoring**

#### **a. ELG Monitoring Schedule**

ELG monitoring must be conducted **once per year** at **each** outfall discharging runoff from any regulated activity identified in Part I.A.1, Tables A-1 and A-2 of this permit, for the parameters specified in the sector-specific section of Part III.

#### **b. Follow-up Actions if Discharge Exceeds Numeric Effluent Limit**

- i) If a numeric effluent limit required by this permit is exceeded, the permittee must conduct corrective action(s) pursuant to Part I.J (Corrective Actions), **and** conduct follow-up monitoring.
- ii) The permittee must conduct follow-up monitoring during the next qualifying rain event for any parameter which exceeded an effluent limit.
- iii) If the follow-up monitoring exceeds the applicable effluent limitation, the permittee must continue to monitor, **at least quarterly**, until the facility discharge is in compliance with the effluent limit or until the Division waives the requirement for additional monitoring.
- iv) Consistent with Part I.K (Reports and Recordkeeping) the violations and the results of any additional sampling shall be recorded on the next appropriate DMR or report.

### 4. **Water Quality Standards Monitoring**

#### **a. Applicability of Water Quality Standards Monitoring**

Consistent with the provisions in Part I.D.3 the Division will apply monitoring conditions (i.e., sampling parameters, sampling frequency, and sample type) in the permit certification issued to a permittee for discharges to impaired waters, discharges to waters designated as critical habitat for threatened and endangered species, and other discharges as necessary to determine if compliance with the other terms and conditions of the permit will control discharges as necessary to meet water quality standards. Monitoring conditions will be consistent with applicable water quality standard(s) for the receiving water, and as applicable, the assumptions of any available wasteload allocation in an applicable TMDL.

**b. Initial monitoring schedule and modification**

- i) The permittee must monitor discharges to impaired waters **once per quarter** at each outfall (except substantially identical outfalls) discharging stormwater to impaired waters.
- ii) Modification of monitoring schedule. Consistent with Part I.H.11 of this permit, permittees may request modification of the water quality standards monitoring requirements required by the permit certification if, after one year of monitoring (4 samples) a pollutant, at a specific outfall, is not detected above the applicable, end-of-pipe water quality standard in any sample.

**c. Natural background pollutant levels**

The quarterly impaired waters monitoring requirement does not apply after one year if the pollutant for which the waterbody is impaired is not detected above natural background levels in the facility stormwater discharge, and the permittee documents that this pollutant is not expected to be present above natural background levels in the facility discharge.

If the pollutant for which the water is impaired is not present and not expected to be present in the facility discharge, or it is present but the permittee has determined that its presence is caused solely by natural background sources, the permittee must notify the Division, after which the permittee may discontinue quarterly monitoring. DMR reporting shall be consistent with Part I.K. of this permit. To support a determination that the pollutant's presence is caused solely by natural background sources, the permittee must keep the following documentation with the facility SWMP records:

- i) An explanation of why the permittee believes that the presence of the pollutant causing the impairment in the facility discharge is not related to the activities at the facility; and
- ii) Data and/or studies that tie the presence of the pollutant causing the impairment in the facility discharge to natural background sources in the watershed.

Natural background pollutants include those substances that are naturally occurring in soils. Natural background pollutants **do not** include legacy pollutants from earlier activity on the site, or pollutants in run-on from neighboring sources which are not naturally occurring.

**5. Additional Monitoring Required by the Division**

The Division may notify a permittee of additional discharge monitoring requirements. Any such notice will briefly state the reasons for the monitoring, locations, and monitoring parameters, frequency and period of monitoring, sample types, and reporting requirements. Such monitoring may include salinity and in-stream sampling and whole effluent toxicity testing.

**J. CORRECTIVE ACTIONS**

**1. Conditions that must be Eliminated**

If any of the following conditions occur at the permitted facility (as identified by the permittee; the Division; or an EPA official, or local, or State entity), the permittee must review and revise the selection, design, installation, and implementation of facility control measures to ensure that the condition is eliminated and will not be repeated in the future:

- a. an unauthorized release or discharge (e.g., spill, leak, or discharge of non-stormwater not authorized by this [see Parts I.A.1.a and I.A.1.b] or another permit) occurs;
- b. a discharge violates a numeric effluent limit (see Part I.I.3);

- c. facility control measures are not stringent enough for the discharge to meet applicable water quality standards;
- d. modifications to the facility control measures are necessary to meet the practice-based effluent limits in this permit; or
- e. the permittee finds in a facility inspection, that facility control measures are not properly selected, designed, installed, operated or maintained.

## 2. **Conditions that Require Review and Modification**

If any of the following conditions occur, the permittee must review the selection, design, installation, and implementation of facility control measures to determine the appropriate modifications necessary to attain the effluent limits in this permit:

- a. construction or a change in design, operation, or maintenance at the facility significantly changes the nature of pollutants discharged in stormwater from the facility, or significantly increases the quantity of pollutants discharged; or
- b. the **average** of quarterly sampling results as described in Part I.I.2.e of this permit exceeds an applicable benchmark.

## 3. **Corrective Action Reports and Deadlines**

The permittee must document discovery of any condition listed in Parts I.J.1 and I.J.2 above, within 24 hours and 5 days as described below, submit the documentation in an annual report as required in Part I.K (Reports and Recordkeeping), and retain a copy onsite with the facility SWMP as required in Part I.F (SWMP-Specific SWMP Requirements).

### **a. 24 hour documentation requirement:**

Within 24 hours of discovery of any condition listed in Parts I.J.1 and I.J.2, the permittee must document the following information:

- i) Identification of the condition triggering the need for corrective action review;
- ii) Description of the problem identified; and
- iii) Date the problem was identified.

### **b. Five (5) day documentation requirement:**

Within five (5) days of discovery of any condition listed in Parts I.J.1 and I.J.2, the permittee must document the following information:

- i) Summary of corrective action taken or to be taken (or, for triggering events identified in Part I.J.2 where the permittee determines that corrective action is not necessary, the basis for this determination);
- ii) Notice of whether SWMP modifications are required as a result of this discovery or corrective action;
- iii) Date corrective action initiated; and
- iv) Date corrective action completed or expected to be completed.

## 4. **Control measure modification**

Modification of any control measure as part of the corrective action required by Parts I.J.1 and I.J.2 must be performed consistent with Part I.C (Control Measures) of this permit.

## 5. **Substantially Identical Outfalls**

If the event triggering corrective action is associated with an outfall that represents other substantially identical outfalls, the permittee's review must assess the need for corrective action for each outfall represented by the outfall that triggered the review. Any necessary changes to control measures that affect these other outfalls must also be performed consistent with Part I.C (Control Measures) of this permit, and the permittee must implement interim or temporary controls measures during the maintenance effort.

## **K. REPORTING AND RECORDKEEPING**

### **1. Routine Reporting of Data- Discharge Monitoring Report**

The permittee shall report the data gathered in compliance with Parts I.I.2 through I.I.5 (Specific Monitoring Requirements) on a **quarterly** basis. Reporting of all data gathered shall comply with the requirements of Part I.H. (General Requirements) and Part I.K (Reports and Recordkeeping) of this permit. The permittee shall summarize monitoring results for each calendar quarter and report on Division approved discharge monitoring report (DMR) forms (EPA form 3320-1).

The permittee must submit these forms either by mail, or by using the Division's Net-DMR service. If mailed, one form shall be mailed to the Division, as indicated below, so that the DMR is received no later than the 28th day of the following month (for example, the DMR for the first calendar quarter must be received by the Division by April 28th).

Required DMR reporting conventions are as follows:

- If no discharge occurs during the reporting period, "**No Discharge**" shall be reported on the DMR.
- If the permittee's benchmark sampling frequency is reduced consistent with Part I.I.2.d of this permit (Benchmark Monitoring Actions – *Data not exceeding benchmarks*), the permittee must submit quarterly DMRs and indicate "**Benchmark Met**" in the result field on the DMR for each parameter that meets the sampling frequency reduction criteria.
- If the permittee's monitoring is excepted consistent with Part I.H.13 of this permit, the permittee must submit quarterly DMRs and indicate "**No Exposure**" in the result field on the DMR for each parameter for the period the site meets the monitoring exception criteria.
- If the permittee's benchmark or water quality standard sampling requirement does not apply consistent with Part I.I.2.f and Part I.I.4 of this permit, the permittee must submit quarterly DMRs and indicate "**Natural Background**" in the result field on the DMR for each applicable parameter.

The signed copy of each discharge monitoring report (DMR) shall be submitted to the Division at the following address:

Colorado Department of Public Health and Environment  
Water Quality Control Division  
WQCD-P-B2  
4300 Cherry Creek Drive South  
Denver, Colorado 80246-1530

The Discharge Monitoring Report forms shall be filled out accurately and completely in accordance with requirements of this permit and the instructions on the forms. They shall be signed by an authorized person as identified in Part I.K.6.

### **2. Annual Report**

The permittee must submit an annual report to the Division for the reporting period January 1 through December 31. Annual reports must be received by the Division **by March 31** of the following year. The Annual Report shall include:

- Name of permittee, address, phone number
- Permit certification number
- Facility name and physical address
- Contact person name, title, and phone number
- Summary of inspection dates
- Corrective action documentation as required in Part I.J., and status of any outstanding corrective action(s).

The signed copy of each annual report shall be submitted to the Division at the address below, and a copy maintained with the SWMP.

Attn: Annual Report  
Colorado Department of Public Health and Environment  
Water Quality Control Division  
WQCD-P-B2  
4300 Cherry Creek Drive South  
Denver, Colorado 80246-1530

### 3. **Additional Reporting**

In addition to the reporting requirements stipulated in this Part, the permittee is also subject to the standard permit reporting provisions of Part II of this permit.

### 4. **SWMP Records**

The permittee shall retain copies of the facility SWMP, including any modifications made during the term of this permit, documentation related to corrective actions taken, all reports and certifications required by this permit, monitoring data, and records of all data used to complete the application to be covered by this permit, for a period of at least 3 years from the date that coverage under this permit expires or is terminated.

### 5. **Sampling Records**

The permittee shall establish and maintain records. Those records shall include the following:

- a. The date, type, exact location, and time of sampling or measurements;
- b. The individual(s) who performed the sampling or measurements;
- c. The date(s) the analyses were performed;
- d. The individual(s) who performed the analyses;
- e. The analytical techniques or methods used;
- f. The results of such analyses; and
- g. Any other observations which may result in an impact on the quality or quantity of the discharge as indicated in 40 CFR 122.44 (i)(1)(iii).

The permittee shall retain for a minimum of three (3) years records of all monitoring information, including all original strip chart recordings for continuous monitoring instrumentation, all calibration and maintenance records, copies of all reports required by this permit and records of all data used to complete the application for this permit. This period of retention shall be extended during the course of any unresolved litigation regarding the discharge of pollutants by the permittee or when requested by the Division or EPA.

### 6. **Signatory and Certification Requirements**

- a. All reports and other information required by the Division, shall be signed and certified for accuracy by the permittee in accord with the following criteria:

- i) In the case of corporations, by a responsible corporate officer. For purposes of this section, the responsible corporate officer is responsible for the overall operation of the facility from which the discharge described in the form originates;
- ii) In the case of a partnership, by a general partner;
- iii) In the case of a sole proprietorship, by the proprietor;
- iv) In the case of a municipal, state, or other public facility, by either a principal executive officer, or ranking elected official. For purposes of this section, a principal executive officer has responsibility for the overall operation of the facility from which the discharge originates;
- v) By a duly authorized representative of a person described above, only if:
  - 1) The authorization is made in writing by a person described in i, ii, iii, or iv above;
  - 2) The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity such as the position of plant manager, operator of a well or a well field, superintendent, position of equivalent responsibility, or an individual or position having overall responsibility for environmental matters for the company. (A duly authorized representative may thus be either a named individual or any individual occupying a named position); and,
  - 3) The written authorization is submitted to the Division.
- b. If an authorization as described in this section is no longer accurate because a different individual or position has responsibility for the overall operation of the facility, a new authorization satisfying the requirements of this section must be submitted to the Division prior to or together with any reports, information, or applications to be signed by an authorized representative.

The permittee, or the duly authorized representative shall make and sign the following certification on all such documents:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

#### **L. OTHER TERMS AND CONDITIONS**

1. All dischargers must comply with the lawful requirements of counties, drainage districts and other state or local agencies regarding any discharges of stormwater to storm drain systems or other water courses under their jurisdiction.
2. Reporting to Municipality – Any permitted facility discharging to a municipal storm sewer shall provide the municipality with a copy of the permit application, and/or Annual Reports, upon request. A copy of the SWMP shall also be provided to the municipality upon request.

**PART II**

**A. NOTIFICATION REQUIREMENTS**

**1. Notification to Parties**

All notification requirements under this section shall be directed as follows:

- a. Oral Notifications, during normal business hours shall be to:

Water Quality Protection Section - Industrial Compliance Program  
Water Quality Control Division  
Telephone: (303) 692-3500

- b. Written notification shall be to:

Water Quality Protection Section - Industrial Compliance Program  
Water Quality Control Division  
Colorado Department of Public Health and Environment  
WQCD-WQP-B2  
4300 Cherry Creek Drive South  
Denver, CO 80246-1530

**2. Change in Discharge**

The permittee shall notify the Division, in writing, of any planned physical alterations or additions to the permitted facility. Notice is required only when:

- a. The alteration or addition could significantly change the nature or increase the quantity of pollutants discharged, or;
- b. The alteration or addition results in a significant change in the permittee's sludge use or disposal practices, and such alteration, addition, or change may justify the application of permit conditions that are different from or absent in the existing permit, including notification of additional use or disposal sites not reported pursuant to an approved land application plan.

The permittee shall give advance notice to the Division of any planned changes in the permitted facility or activity which may result in noncompliance with permit requirements.

Whenever notification of any planned physical alterations or additions to the permitted facility is required pursuant to this section, the permittee shall furnish the Division such plans and specifications which the Division deems reasonably necessary to evaluate the effect on the discharge, the stream, or ground water. If the Division finds that such new or altered discharge might be inconsistent with the conditions of the permit, the Division shall require a new or revised permit application and shall follow the procedures specified in Sections 61.5 through 61.6, and 61.15 of the Colorado Discharge Permit System Regulations.

**3. Special Notifications - Definitions**

- a. **Bypass:** The intentional diversion of waste streams from any portion of a treatment facility.
- b. **Severe Property Damage:** Substantial physical damage to property at the treatment facilities which causes them to become inoperable, or substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of a bypass. It does not mean economic loss caused by delays in production.
- c. **Upset:** An exceptional incident in which there is unintentional and temporary noncompliance with permit effluent limitations because of factors beyond the reasonable control of the permittee. An upset does not

include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventative maintenance, or careless or improper operation.

#### 4. **Noncompliance Notification**

- a. If, for any reason, the permittee does not comply with or will be unable to comply with any discharge limitations or standards specified in this permit, the permittee shall, at a minimum, provide the Division with the following information:
  - i) A description of the discharge and cause of noncompliance;
  - ii) The period of noncompliance, including exact dates and times and/or the anticipated time when the discharge will return to compliance; and
  - iii) Steps being taken to reduce, eliminate, and prevent recurrence of the noncomplying discharge.
- b. The permittee shall report the following circumstances **orally within twenty-four (24) hours** from the time the permittee becomes aware of the circumstances, and shall mail to the Division a written report containing the information requested in Part II.A.4.a above, **within five (5) working days** after becoming aware of the following circumstances:
  - i) Circumstances leading to any noncompliance which may endanger health or the environment regardless of the cause of the incident;
  - ii) Circumstances leading to any unanticipated bypass which exceeds any effluent limitations in the permit;
  - iii) Circumstances leading to any upset which causes an exceedance of any effluent limitation in the permit;
  - iv) Daily maximum violations for any of the pollutants limited by Part I.D.3 of this permit and specified as requiring 24-hour notification. This includes any toxic pollutant or hazardous substance or any pollutant specifically identified as the method to control any toxic pollutant or hazardous substance.
- c. Unless otherwise indicated in this permit, the permittee shall report instances of non-compliance which are not required to be reported within 24-hours at the time Discharge Monitoring Reports are submitted. The reports shall contain the information listed in sub-paragraph (a) of this section.

#### 5. **Other Notification Requirements**

Reports of compliance or noncompliance with, or any progress reports on, interim and final requirements contained in any **compliance schedule** in the permit shall be submitted no later than fourteen (14) calendar days following each scheduled date, unless otherwise provided by the Division.

The permittee shall notify the Division, in writing, thirty (30) calendar days in advance of a proposed transfer of permit as provided in Part II.B.3.

The permittee's notification of all anticipated noncompliance does not stay any permit condition.

All existing manufacturing, commercial, mining, and silvicultural dischargers must notify the Division as soon as they know or have reason to believe:

- a. That any activity has occurred or will occur which would result in the discharge, on a routine or frequent basis, of any toxic pollutant which is not limited in the permit, if that discharge will exceed the highest of the following "notification levels":
  - i) One hundred micrograms per liter (100 µg/l);

- ii) Two hundred micrograms per liter (200 µg/l) for acrolein and acrylonitrile; five hundred micrograms per liter (500 µg/l) for 2,4-dinitrophenol and 2-methyl-4,6-dinitrophenol; and one milligram per liter (1.0 mg/l) for antimony;
  - iii) Five (5) times the maximum concentration value reported for that pollutant in the permit application in accordance with Section 61.4(2)(g).
  - iv) The level established by the Division in accordance with 40 C.F.R. § 122.44(f).
- b. That any activity has occurred or will occur which would result in any discharge, on a non-routine or infrequent basis, of a toxic pollutant which is not limited in the permit, if that discharge will exceed the highest of the following "notification levels":
- i) Five hundred micrograms per liter (500 µg/l);
  - ii) One milligram per liter (1 mg/l) for antimony; and
  - iii) Ten (10) times the maximum concentration value reported for that pollutant in the permit application.
  - iv) The level established by the Division in accordance with 40 C.F.R. § 122.44(f).

#### 6. **Bypass Notification**

If the permittee knows in advance of the need for a bypass, a notice shall be submitted, at least ten (10) calendar days before the date of the bypass, to the Division. The bypass shall be subject to Division approval and limitations imposed by the Division. Violations of requirements imposed by the Division will constitute a violation of this permit.

#### 7. **Upsets**

##### a. Effect of an Upset

An upset constitutes an affirmative defense to an action brought for noncompliance with permit effluent limitations if the requirements of paragraph (b) of this section are met. No determination made during administrative review of claims that noncompliance was caused by upset, and before an action for noncompliance, is final administrative action subject to judicial review.

##### b. Conditions Necessary for a Demonstration of Upset

A permittee who wishes to establish the affirmative defense of upset shall demonstrate through properly signed contemporaneous operating logs, or other relevant evidence that:

- i) An upset occurred and that the permittee can identify the specific cause(s) of the upset; and
- ii) The permitted facility was at the time being properly operated and maintained; and
- iii) The permittee submitted proper notice of the upset as required in Part II.A.4. of this permit (24-hour notice); and
- iv) The permittee complied with any remedial measure necessary to minimize or prevent any discharge or sludge use or disposal in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment.

In addition to the demonstration required above, a permittee who wishes to establish the affirmative defense of upset for a violation of effluent limitations based upon water quality standards shall also demonstrate through monitoring, modeling or other methods that the relevant standards were achieved in the receiving water.

c. **Burden of Proof**

In any enforcement proceeding the permittee seeking to establish the occurrence of an upset has the burden of proof.

**8. Discharge Point**

Any discharge to the waters of the State from a point source other than specifically authorized by this permit is prohibited.

**9. Proper Operation and Maintenance**

The permittee shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the permittee as necessary to achieve compliance with the conditions of this permit. Proper operation and maintenance includes effective performance and adequate laboratory and process controls, including appropriate quality assurance procedures (40 CFR 122.41(e)). This provision requires the operation of back-up or auxiliary facilities or similar systems which are installed by the permittee only when necessary to achieve compliance with the conditions of the permit.

**10. Minimization of Adverse Impact**

The permittee shall take all reasonable steps to minimize or prevent any discharge of sludge use or disposal in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment. As necessary, accelerated or additional monitoring to determine the nature and impact of the noncomplying discharge is required.

**11. Removed Substances**

Solids, sludges, or other pollutants removed in the course of treatment or control of wastewaters shall be disposed in accordance with applicable state and federal regulations.

For all domestic wastewater treatment works, at industrial facilities, the permittee shall dispose of sludge in accordance with all State and Federal regulations.

**12. Submission of Incorrect or Incomplete Information**

Where the permittee failed to submit any relevant facts in a permit application, or submitted incorrect information in a permit application or report to the Division, the permittee shall promptly submit the relevant information which was not submitted or any additional information needed to correct any erroneous information previously submitted.

**13. Bypass**

- a. Bypasses are prohibited and the Division may take enforcement action against the permittee for bypass, unless:
  - i) The bypass is unavoidable to prevent loss of life, personal injury, or severe property damage;

- ii) There were no feasible alternatives to bypass such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance; and
  - iii) Proper notices were submitted in compliance with Part II.A.4.
- b. "Severe property damage" as used in this Subsection means substantial physical damage to the treatment facilities which causes them to become inoperable, or substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.
  - c. The permittee may allow a bypass to occur which does not cause effluent limitations to be exceeded, but only if it also is for essential maintenance or to assure optimal operation. These bypasses are not subject to the provisions of paragraph (a) above.
  - d. The Division may approve an anticipated bypass, after considering adverse effects, if the Division determines that the bypass will meet the conditions specified in paragraph (a) above.

#### 14. Reduction, Loss, or Failure of Treatment Facility

The permittee has the duty to halt or reduce any activity if necessary to maintain compliance with the effluent limitations of the permit. Upon reduction, loss, or failure of the treatment facility, the permittee shall, to the extent necessary to maintain compliance with its permit, control production, control sources of wastewater, or all discharges, until the facility is restored or an alternative method of treatment is provided. This provision also applies to power failures, unless an alternative power source sufficient to operate the wastewater control facilities is provided.

It shall not be a defense for a permittee in an enforcement action that it would be necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.

### B. RESPONSIBILITIES

#### 1. Inspections and Right to Entry

The permittee shall allow the Division and/or the authorized representative, upon the presentation of credentials:

- a. To enter upon the permittee's premises where a regulated facility or activity is located or in which any records are required to be kept under the terms and conditions of this permit;
- b. At reasonable times to have access to and copy any records required to be kept under the terms and conditions of this permit and to inspect any monitoring equipment or monitoring method required in the permit; and
- c. To enter upon the permittee's premises in a reasonable manner and at a reasonable time to inspect and/or investigate, any actual, suspected, or potential source of water pollution, or to ascertain compliance or non-compliance with the Colorado Water Quality Control Act or any other applicable state or federal statute or regulation or any order promulgated by the Division. The investigation may include, but is not limited to, the following: sampling of any discharge and/or process waters, the taking of photographs, interviewing of any person having knowledge related to the discharge permit or alleged violation, access to any and all facilities or areas within the permittee's premises that may have any effect on the discharge, permit, or alleged violation. Such entry is also authorized for the purpose of inspecting and copying records required to be kept concerning any effluent source.

- d. The permittee shall provide access to the Division to sample the discharge at a point after the final treatment process but prior to the discharge mixing with state waters upon presentation of proper credentials.

In the making of such inspections, investigations, and determinations, the Division, insofar as practicable, may designate as its authorized representatives any qualified personnel of the Department of Agriculture. The Division may also request assistance from any other state or local agency or institution.

## **2. Duty to Provide Information**

The permittee shall furnish to the Division, within a reasonable time, any information which the Division may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit, or to determine compliance with this permit. The permittee shall also furnish to the Division, upon request, copies of records required to be kept by this permit.

## **3. Transfer of Ownership or Control**

- a. Except as provided in paragraph b. of this section, a permit may be transferred by a permittee only if the permit has been modified or revoked and reissued as provided in Section 61.8(8) of the Colorado Discharge Permit System Regulations, to identify the new permittee and to incorporate such other requirements as may be necessary under the Federal Act.
- b. A permit may be automatically transferred to a new permittee if:
  - i) The current permittee notifies the Division in writing 30 days in advance of the proposed transfer date; and
  - ii) The notice includes a written agreement between the existing and new permittee(s) containing a specific date for transfer of permit responsibility, coverage and liability between them; and
  - iii) The Division does not notify the existing permittee and the proposed new permittee of its intent to modify, or revoke and reissue the permit.
  - iv) Fee requirements of the Colorado Discharge Permit System Regulations, Section 61.15, have been met.

## **4. Availability of Reports**

Except for data determined to be confidential under Section 308 of the Federal Clean Water Act and the Colorado Discharge Permit System Regulations 5 CCR 1002-61, Section 61.5(4), all reports prepared in accordance with the terms of this permit shall be available for public inspection at the offices of the Division and the Environmental Protection Agency.

The name and address of the permit applicant(s) and permittee(s), permit applications, permits and effluent data shall not be considered confidential. Knowingly making false statement on any such report may result in the imposition of criminal penalties as provided for in Section 309 of the Federal Clean Water Act, and Section 25-8-610 C.R.S.

## **5. Modification, Suspension, Revocation, or Termination of Permits By the Division**

The filing of a request by the permittee for a permit modification, revocation and reissuance, termination or a notification of planned changes or anticipated noncompliance, does not stay any permit condition.

- a. A permit may be modified, suspended, or terminated in whole or in part during its term for reasons determined by the Division including, but not limited to, the following:
- i) Violation of any terms or conditions of the permit;
  - ii) Obtaining a permit by misrepresentation or failing to disclose any fact which is material to the granting or denial of a permit or to the establishment of terms or conditions of the permit; or
  - iii) Materially false or inaccurate statements or information in the permit application or the permit.
  - iv) A determination that the permitted activity endangers human health or the classified or existing uses of state waters and can only be regulated to acceptable levels by permit modifications or termination.
- b. A permit may be modified in whole or in part for the following causes, provided that such modification complies with the provisions of Section 61.10 of the Colorado Discharge Permit System Regulations:
- i) There are material and substantial alterations or additions to the permitted facility or activity which occurred after permit issuance which justify the application of permit conditions that are different or absent in the existing permit.
  - ii) The Division has received new information which was not available at the time of permit issuance (other than revised regulations, guidance, or test methods) and which would have justified the application of different permit conditions at the time of issuance. For permits issued to new sources or new dischargers, this cause includes information derived from effluent testing required under Section 61.4(7)(e) of the Colorado Discharge Permit System Regulations. This provision allows a modification of the permit to include conditions that are less stringent than the existing permit only to the extent allowed under Section 61.10 of the Colorado Discharge Permit System Regulations.
  - iii) The standards or regulations on which the permit was based have been changed by promulgation of amended standards or regulations or by judicial decision after the permit was issued. Permits may be modified during their terms for this cause only as follows:
    - (A) The permit condition requested to be modified was based on a promulgated effluent limitation guideline, EPA approved water quality standard, or an effluent limitation set forth in 5 CCR 1002-62, § 62 et seq.; and
    - (B) EPA has revised, withdrawn, or modified that portion of the regulation or effluent limitation guideline on which the permit condition was based, or has approved a Commission action with respect to the water quality standard or effluent limitation on which the permit condition was based; and
    - (C) The permittee requests modification after the notice of final action by which the EPA effluent limitation guideline, water quality standard, or effluent limitation is revised, withdrawn, or modified; or
    - (D) For judicial decisions, a court of competent jurisdiction has remanded and stayed EPA promulgated regulations or effluent limitation guidelines, if the remand and stay concern that portion of the regulations or guidelines on which the permit condition was based and a request is filed by the permittee in accordance with this Regulation, within ninety (90) days of judicial remand.
  - iv) The Division determines that good cause exists to modify a permit condition because of events over which the permittee has no control and for which there is no reasonable available remedy.
  - v) The permittee has received a variance.

- 
- vi) When required to incorporate applicable toxic effluent limitation or standards adopted pursuant to § 307(a) of the Federal act.
  - vii) When required by the reopener conditions in the permit.
  - viii) As necessary under 40 C.F.R. 403.8(e), to include a compliance schedule for the development of a pretreatment program.
  - ix) When the level of discharge of any pollutant which is not limited in the permit exceeds the level which can be achieved by the technology-based treatment requirements appropriate to the permittee under Section 61.8(2) of the Colorado Discharge Permit System Regulations.
  - x) To establish a pollutant notification level required in Section 61.8(5) of the Colorado Discharge Permit System Regulations.
  - xi) To correct technical mistakes, such as errors in calculation, or mistaken interpretations of law made in determining permit conditions, to the extent allowed in Section 61.10 of the Colorado State Discharge Permit System Regulations.
  - xii) When required by a permit condition to incorporate a land application plan for beneficial reuse of sewage sludge, to revise an existing land application plan, or to add a land application plan.
  - xiii) For any other cause provided in Section 61.10 of the Colorado Discharge Permit System Regulations.
- c. At the request of a permittee, the Division may modify or terminate a permit and issue a new permit if the following conditions are met:
- i) The Regional Administrator has been notified of the proposed modification or termination and does not object in writing within thirty (30) days of receipt of notification,
  - ii) The Division finds that the permittee has shown reasonable grounds consistent with the Federal and State statutes and regulations for such modifications or termination;
  - iii) Requirements of Section 61.15 of the Colorado Discharge Permit System Regulations have been met, and
  - iv) Requirements of public notice have been met.
- d. Permit modification (except for minor modifications), termination or revocation and reissuance actions shall be subject to the requirements of Sections 61.5(2), 61.5(3), 61.6, 61.7 and 61.15 of the Colorado Discharge Permit System Regulations. The Division shall act on a permit modification request, other than minor modification requests, within 180 days of receipt thereof. Except for minor modifications, the terms of the existing permit govern and are enforceable until the newly issued permit is formally modified or revoked and reissued following public notice.
- e. Upon consent by the permittee, the Division may make minor permit modifications without following the requirements of Sections 61.5(2), 61.5(3), 61.7, and 61.15 of the Colorado Discharge Permit System Regulations. Minor modifications to permits are limited to:
- i) Correcting typographical errors; or
  - ii) Increasing the frequency of monitoring or reporting by the permittee; or
  - iii) Changing an interim date in a schedule of compliance, provided the new date of compliance is not more than 120 days after the date specific in the existing permit and does not interfere with attainment of the final compliance date requirement; or

- iv) Allowing for a transfer in ownership or operational control of a facility where the Division determines that no other change in the permit is necessary, provided that a written agreement containing a specific date for transfer of permit responsibility, coverage and liability between the current and new permittees has been submitted to the Division; or
  - v) Changing the construction schedule for a discharger which is a new source, but no such change shall affect a discharger's obligation to have all pollution control equipment installed and in operation prior to discharge; or
  - vi) Deleting a point source outfall when the discharge from that outfall is terminated and does not result in discharge of pollutants from other outfalls except in accordance with permit limits.
- f. When a permit is modified, only the conditions subject to modification are reopened. If a permit is revoked and reissued, the entire permit is reopened and subject to revision and the permit is reissued for a new term.
  - g. The filing of a request by the permittee for a permit modification, revocation and reissuance or termination does not stay any permit condition.
  - h. All permit modifications and reissuances are subject to the antibacksliding provisions set forth in 61.10(e) through (g).

#### 6. **Oil and Hazardous Substance Liability**

Nothing in this permit shall be construed to preclude the institution of any legal action or relieve the permittee from any responsibilities, liabilities, or penalties to which the permittee is or may be subject to under Section 311 (Oil and Hazardous Substance Liability) of the Clean Water Act.

#### 7. **State Laws**

Nothing in this permit shall be construed to preclude the institution of any legal action or relieve the permittee from any responsibilities, liabilities, or penalties established pursuant to any applicable State law or regulation under authority granted by Section 510 of the Clean Water Act. Nothing in this permit shall be construed to prevent or limit application of any emergency power of the division.

#### 8. **Permit Violations**

Failure to comply with any terms and/or conditions of this permit shall be a violation of this permit. The discharge of any pollutant identified in this permit more frequently than or at a level in excess of that authorized shall constitute a violation of the permit. Except as provided in Parts I.H and K and Part II.A or B, nothing in this permit shall be construed to relieve the permittee from civil or criminal penalties for noncompliance (40 CFR 122.41(a)(1)).

#### 9. **Property Rights**

The issuance of this permit does not convey any property or water rights in either real or personal property, or stream flows, or any exclusive privileges, nor does it authorize any injury to private property or any invasion of personal rights, nor any infringement of Federal, State or local laws or regulations.

**10. Severability**

The provisions of this permit are severable. If any provisions of this permit, or the application of any provision of this permit to any circumstance, is held invalid, the application of such provision to other circumstances and the application of the remainder of this permit shall not be affected.

**11. Renewal Application**

If the permittee desires to continue to discharge, a permit renewal application shall be submitted at least one hundred eighty (180) days before this permit expires. If the permittee anticipates there will be no discharge after the expiration date of this permit, the Division should be promptly notified so that it can terminate the permit in accordance with Part II.B.5.

**12. Confidentiality**

Any information relating to any secret process, method of manufacture or production, or sales or marketing data which has been declared confidential by the permittee, and which may be acquired, ascertained, or discovered, whether in any sampling investigation, emergency investigation, or otherwise, shall not be publicly disclosed by any member, officer, or employee of the Commission or the Division, but shall be kept confidential. Any person seeking to invoke the protection of this Subsection (12) shall bear the burden of proving its applicability. This section shall never be interpreted as preventing full disclosure of effluent data.

**13. Fees**

The permittee is required to submit payment of an annual fee as set forth in the 2005 amendments to the Water Quality Control Act. Section 25-8-502 (1) (b), and the Colorado Discharge Permit System Regulations 5 CCR 1002-61, Section 61.15 as amended. Failure to submit the required fee when due and payable is a violation of the permit and will result in enforcement action pursuant to Section 25-8-601 et. seq., C.R.S. 1973 as amended.

**14. Duration of Permit**

The duration of a permit shall be for a fixed term and shall not exceed five (5) years. Filing of a timely and complete application shall cause the expired permit to continue in force to the effective date of the new permit. The permit's duration may be extended only through administrative extensions and not through interim modifications.

**15. Section 307 Toxics**

If a toxic effluent standard or prohibition, including any applicable schedule of compliance specified, is established by regulation pursuant to Section 307 of the Federal Act for a toxic pollutant which is present in the permittee's discharge and such standard or prohibition is more stringent than any limitation upon such pollutant in the discharge permit, the Division shall institute proceedings to modify or revoke and reissue the permit to conform to the toxic effluent standard or prohibition.

**16. Effect of Permit Issuance**

- a. The issuance of a permit does not convey any property rights or any exclusive privilege.
- b. The issuance of a permit does not authorize any injury to person or property or any invasion of personal rights, nor does it authorize the infringement of federal, state, or local laws or regulations.
- c. Except for any toxic effluent standard or prohibition imposed under Section 307 of the Federal act or any standard for sewage sludge use or disposal under Section 405(d) of the Federal act, compliance with a permit

during its term constitutes compliance, for purposes of enforcement, with Sections 301, 302, 306, 318, 403, and 405(a) and (b) of the Federal act. However, a permit may be modified, revoked and reissued, or terminated during its term for cause as set forth in Section 61.8(8) of the Colorado Discharge Permit System Regulations.

- d. Compliance with a permit condition which implements a particular standard for sewage sludge use or disposal shall be an affirmative defense in any enforcement action brought for a violation of that standard for sewage sludge use or disposal.

**PART III**

**Sector-Specific Requirements for Industrial Activity**

## **A. Sector A – Timber Products**

The permittee must comply with Part III sector-specific requirements associated with the facility's primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee's facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

### **1. Covered Stormwater Discharges**

The requirements in Sector A apply to stormwater discharges associated with industrial activity from Timber Products facilities as identified by the SIC Codes specified under Sector A in Table A-1 of Appendix A of the permit.

### **2. Limitation on Coverage**

- a. Prohibition of Discharges. (See also Part I.A.2) Not covered by this permit: stormwater discharges from areas where there may be contact with the chemical formulations sprayed to provide surface protection. These discharges must be covered by a separate CDPS permit.
- b. Allowable Non-Stormwater Discharges. (See also Part I.A.1.b) Also authorized by this permit, provided the non-stormwater component of the discharge is in compliance with the requirements in Part I.D.1 (Practice-based Effluent Limits): discharges from the spray down of lumber and wood product storage yards where no chemical additives are used in the spray-down waters and no chemicals are applied to the wood during storage.

Source-water used for spray-down water must not contain pollutants in concentrations exceeding the State groundwater and surface water standards.

### **3. Additional Practice-Based Effluent Limits**

Good Housekeeping. (See also Part I.D.1.b) In areas where storage, loading and unloading, and material handling occur, perform good housekeeping to limit the discharge of wood debris, minimize the leachate generated from decaying wood materials, and minimize the generation of dust.

### **4. Additional SWMP Requirements (see also Part I.F)**

- a. Drainage Area Site Map. Document in the facility's SWMP where any of the following may be exposed to precipitation or surface runoff: processing areas, treatment chemical storage areas, treated wood and residue storage areas, wet decking areas, dry decking areas, untreated wood and residue storage areas, and treatment equipment storage areas.
- b. Inventory of Exposed Materials. Where such information exists, if the permittee's facility has used chlorophenolic, creosote, or chromium-copper-arsenic formulations for wood surface protection or preserving, document in the SWMP the following: areas where contaminated soils, treatment equipment, and stored materials still remain and the management practices employed to minimize the contact of these materials with stormwater runoff.
- c. Description of Stormwater Management Controls. Document measures implemented to address the following activities and sources: log, lumber, and wood product storage areas; residue storage areas; loading and unloading areas; material handling areas; chemical storage areas; and equipment and vehicle maintenance, storage, and repair areas. If the permittee's facility performs wood surface protection and preservation activities, address the specific control measures, including any BMPs, for these activities.

### **5. Additional Inspection Requirements (see also Part I.G)**

If the permittee's facility performs wood surface protection and preservation activities, inspect processing areas, transport areas, and treated wood storage areas monthly to assess the usefulness of practices to minimize the deposit of treatment chemicals on unprotected soils and in areas that will come in contact with stormwater discharges.

## 6. Sector-Specific Benchmarks

Table A-1 identifies benchmarks that apply to the specific subsectors of Sector A. These benchmarks apply to both the facility's primary industrial activity and any co-located industrial activities, which describe the permittee's site activities.

<b>Table A-1</b>		
<b>Subsector (The permittee may be subject to requirements for more than one sector/subsector)</b>	<b>Parameter</b>	<b>Benchmark Monitoring Concentration</b>
<b>Subsector A1.</b> General Sawmills and Planing Mills (SIC 2421)	Chemical Oxygen Demand (COD)	120.0 mg/L
	Total Suspended Solids (TSS)	100 mg/L
	Total Zinc <sup>1</sup>	Hardness Dependent
<b>Subsector A2.</b> Wood Preserving (SIC 2491)	Total Arsenic	0.15 mg/L
	Total Copper <sup>1</sup>	Hardness Dependent
<b>Subsector A3.</b> Log Storage and Handling (SIC 2411)	Total Suspended Solids (TSS)	100 mg/L
<b>Subsector A4.</b> Hardwood Dimension and Flooring Mills; Special Products Sawmills, not elsewhere classified; Millwork, Veneer, Plywood, and Structural Wood; Wood Pallets and Skids; Wood Containers, not elsewhere classified; Wood Buildings and Mobile Homes; Reconstituted Wood Products; and Wood Products Facilities not elsewhere classified (SIC 2426, 2429, 2431-2439 (except 2434), 2441, 2448, 2449, 2451, 2452, 2493, and 2499)	Chemical Oxygen Demand (COD)	120.0 mg/L
	Total Suspended Solids (TSS)	100.0 mg/L

<sup>1</sup> The benchmark values of some metals are dependent on water hardness. The ranges occur in 25 mg/L increments. Hardness Dependent Benchmarks follow in the table below:

<b>Water Hardness Range</b>	<b>Copper (mg/L)</b>	<b>Zinc (mg/L)</b>
0-25 mg/L	0.0038	0.04
25-50 mg/L	0.0056	0.05
50-75 mg/L	0.0090	0.08
75-100 mg/L	0.0123	0.11
100-125 mg/L	0.0156	0.13
125-150 mg/L	0.0189	0.16
150-175 mg/L	0.0221	0.18
175-200 mg/L	0.0253	0.20
200-225 mg/L	0.0285	0.23
225-250 mg/L	0.0316	0.25
250+ mg/L	0.0332	0.26

**7. Effluent Limitations Based on Effluent Limitations Guidelines (see also Part I.A.1.b)**

Table A-2 identifies effluent limits that apply to the industrial activities described below. Compliance with these effluent limits is to be determined based on discharges from these industrial activities independent of commingling with any other waste streams that may be covered under this permit.

**Table A-2<sup>1</sup>**

<b>Table A-2<sup>1</sup></b>		
<b>Industrial Activity</b>		
Discharges resulting from spray down or intentional wetting of logs at wet deck storage areas.	pH	6.0 - 9.0 s.u
	Debris (woody material such as bark, twigs, branches, heartwood, or sapwood)	No discharge of debris that will not pass through a 2.54-cm (1-in.) diameter round opening.

<sup>1</sup> Monitor annually.

**B. Sector B – Paper and Allied Products**

The permittee must comply with Part III sector-specific requirements associated with the facility’s primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee’s facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

**1. Covered Stormwater Discharges.**

The requirements in Sector B apply to stormwater discharges associated with industrial activity from Paper and Allied Products Manufacturing facilities, as identified by the SIC Codes specified under Sector B in Table A-1 of Appendix A of the permit.

**2. Sector-Specific Benchmarks.**

**Table B-1.**

<b>Subsector (The permittee may be subject to requirements for more than one sector/subsector)</b>	<b>Parameter</b>	<b>Benchmark Monitoring Concentration</b>
<b>Subsector B1.</b> Paperboard Mills (SIC Code 2631)	Chemical Oxygen Demand (COD)	120 mg/L

**C. Sector C – Chemical and Allied Products Manufacturing, and Refining**

The permittee must comply with Part III sector-specific requirements associated with the facility’s primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee’s facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

**1. Covered Stormwater Discharges.**

The requirements in Sector C apply to stormwater discharges associated with industrial activity from Chemical and Allied Products Manufacturing, and Refining facilities, as identified by the SIC Codes specified under Sector C in Table A-1 of Appendix A of the permit.

**2. Limitations on Coverage.**

- a. Prohibition of Non-Stormwater Discharges. (See also Part I.A.2) The following are not covered by this permit: non-stormwater discharges containing inks, paints, or substances (hazardous, nonhazardous, etc.) resulting from an onsite spill, including materials collected in drip pans; wash water from material handling and processing areas; and wash water from drum, tank, or container rinsing and cleaning.

**3. Sector-Specific Benchmarks.**

Table C-1 identifies benchmarks that apply to the specific subsectors of Sector C. These benchmarks apply to both the permittee’s primary industrial activity and any co-located industrial activities.

**Table C-1.**

<b>Subsector (The permittee may be subject to requirements for more than one sector/subsector)</b>	<b>Parameter</b>	<b>Benchmark Monitoring Concentration</b>
<b>Subsector C1.</b> Agricultural Chemicals (SIC 2873-2879)	Nitrate plus Nitrite Nitrogen	0.68 mg/L
	Total Lead <sup>1</sup>	Hardness Dependent
	Total Iron	1.0 mg/L
	Total Zinc <sup>1</sup>	Hardness Dependent
	Phosphorus	2.0 mg/L
<b>Subsector C2.</b> Industrial Inorganic Chemicals (SIC 2812-2819)	Total Aluminum	0.75 mg/ L
	Total Iron	1.0 mg/L
	Nitrate plus Nitrite Nitrogen	0.68 mg/L
<b>Subsector C3.</b> Soaps, Detergents, Cosmetics, and Perfumes (SIC 2841-2844)	Nitrate plus Nitrite Nitrogen	0.68 mg/L
	Total Zinc <sup>1</sup>	Hardness Dependent
<b>Subsector C4.</b> Plastics, Synthetics, and Resins (SIC 2821-2824)	Total Zinc <sup>1</sup>	Hardness Dependent

<sup>1</sup> The benchmark values of some metals are dependent on water hardness. The ranges occur in 25 mg/L increments. Hardness Dependent Benchmarks follow in the table below:

<b>Water Hardness Range</b>	<b>Lead (mg/L)</b>	<b>Zinc (mg/L)</b>
0-25 mg/L	0.014	0.04
25-50 mg/L	0.023	0.05
50-75 mg/L	0.045	0.08
75-100 mg/L	0.069	0.11
100-125 mg/L	0.095	0.13
125-150 mg/L	0.122	0.16
150-175 mg/L	0.151	0.18
175-200 mg/L	0.182	0.20
200-225 mg/L	0.213	0.23
225-250 mg/L	0.246	0.25
250+ mg/L	0.262	0.26

**4. Effluent Limitations Based on Effluent Limitations Guidelines (see also Part I.A.1.a)**

Table C-2 identifies effluent limits that apply to the industrial activities described below. Compliance with these effluent limits is to be determined based on discharges from these industrial activities independent of commingling with any other waste streams that may be covered under this permit.

<b>Table C-2<sup>1</sup></b>		
<b>Industrial Activity</b>	<b>Parameter</b>	<b>Effluent Limit</b>
Runoff from phosphate fertilizer manufacturing facilities that comes into contact with any raw materials, finished product, by-products or waste products (SIC 2874)	Total Phosphorus (as P)	105.0 mg/L, daily maximum
		35 mg/L, 30-day avg.
	Fluoride	75.0 mg/L, daily maximum
		25.0 mg/L, 30-day avg.

<sup>1</sup> Monitor annually.

**D. Sector D – Asphalt Paving and Roofing Materials and Lubricant Manufacturing**

The permittee must comply with Part III sector-specific requirements associated with the facility’s primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee’s facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

**1. Covered Stormwater Discharges.**

The requirements in Sector D apply to stormwater discharges associated with industrial activity from Asphalt Paving and Roofing Materials and Lubricant Manufacturing facilities, as identified by the SIC Codes specified under Sector D in Table A-1 of Appendix A of the permit.

**2. Limitations on Coverage.**

The following stormwater discharges associated with industrial activity are not authorized by this permit (See also Part I.A.2)

- a. Discharges from petroleum refining facilities, including those that manufacture asphalt or asphalt products, that are subject to nationally established effluent limitation guidelines found in 40 CFR Part 419 (Petroleum Refining); or
- b. Discharges from oil recycling facilities; or
- c. Discharges associated with fats and oils rendering.

**3. Mobile Asphalt Batch Plants**

Permit certifications for mobile asphalt batch plants (i.e., SIC code 2951) may be issued for a specific plant, with the equipment defined as the facility, which allows existing batch plants to move around the state without re-applying for permit coverage at each new location. Permittees must notify the Division in writing each time the mobile plant is moved, and must meet all permit requirements, terms and conditions for each location.

**4. Sector-Specific Benchmarks**

Table D-1 identifies benchmarks that apply to the specific subsectors of Sector D. These benchmarks apply to both the facility’s primary industrial activity and any co-located industrial activities, which describe the permittee’s site activities.

**Table D-1.**

Subsector	Parameter	Benchmark Monitoring Concentration
<b>Subsector D1.</b> Asphalt Paving and Roofing Materials (SIC 2951, 2952)	Total Suspended Solids (TSS)	100 mg/L

### 5. Effluent Limitations Based on Effluent Limitations Guidelines (see also Part I.A.1.a)

Table D-2 identifies effluent limits that apply to the industrial activities described below. Compliance with these effluent limits is to be determined based on discharges from these industrial activities independent of commingling with any other waste streams that may be covered under this permit.

**Table D-2<sup>1</sup>**

<b>Industrial Activity</b>	<b>Parameter</b>	<b>Effluent Limit</b>
Discharges from asphalt emulsion facilities.	Total Suspended Solids (TSS)	23.0 mg/L, daily maximum 15.0 mg/L, 30-day avg.
	pH	6.0 - 9.0 s.u.
	Oil and Grease	15.0 mg/L, daily maximum
		10 mg/L, 30-day avg.

<sup>1</sup>Monitor annually.

## **E. Sector E – Glass, Clay, Cement, Concrete, and Gypsum Products**

The permittee must comply with Part III sector-specific requirements associated with the facility's primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee's facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

### **1. Covered Stormwater Discharges.**

The requirements in Sector E apply to stormwater discharges associated with industrial activity from Glass, Clay, Cement, Concrete, and Gypsum Products facilities, as identified by the SIC Codes specified under Sector E in Table A-1 of Appendix A of the permit.

### **2. Mobile Concrete Batch Plants**

Permit certifications for mobile concrete batch plants (i.e., SIC code 3273) may be issued for a specific plant, with the equipment defined as the facility, which allows existing batch plants to move around the state without re-applying for permit coverage at each new location. Permittees must notify the Division in writing each time the mobile plant is moved, and must meet all permit requirements, terms and conditions for each location.

### **3. Additional Practice-Based Effluent Limits.**

- a. Good Housekeeping Measures. (See also Part I.D.1.b) With good housekeeping, prevent or minimize the discharge of spilled cement, aggregate (including sand or gravel), kiln dust, fly ash, settled dust, or other significant material in stormwater from paved portions of the site that are exposed to stormwater. Consider sweeping regularly or using other equivalent measures to minimize the presence of these materials. Indicate in the facility SWMP the frequency of sweeping or equivalent measures. Determine the frequency based on the amount of industrial activity occurring in the area and the frequency of precipitation, but it must be performed at least once a month if cement, aggregate, kiln dust, fly ash, or settled dust are being handled or processed. The permittee must also prevent the exposure of fine granular solids (cement, fly ash, kiln dust, etc.) to stormwater, where practicable, by storing these materials in enclosed silos, hoppers, or buildings, or under other covering.

### **4. Additional SWMP Requirements. (see also Part I.F)**

- a. Drainage Area Site Map. Document in the SWMP the locations of the following, as applicable: bag house or other dust control device; recycle/sedimentation pond, clarifier, or other device used for the treatment of process wastewater; and the areas that drain to the treatment device.
- b. Certification. For facilities producing ready-mix concrete, concrete block, brick, or similar products, include in the non-stormwater discharge certification a description of measures that ensure that process waste waters resulting from washing trucks, mixers, transport buckets, forms, or other equipment are discharged in accordance with CDPS requirements or are recycled.

### **5. Sector-Specific Benchmarks.**

Table E-1 identifies benchmarks that apply to the specific subsectors of Sector E. These benchmarks apply to both the facility's primary industrial activity and any co-located industrial activities, which describe the permittee's site activities.

**Table E-1.**

<b>Subsector (The permittee may be subject to requirements for more than one sector/subsector)</b>	<b>Parameter</b>	<b>Benchmark Monitoring Cutoff Concentration</b>
<b>Subsector E1.</b> Clay Product Manufacturers (SIC 3251-3259, 3261-3269)	Total Aluminum	0.75 mg/L
<b>Subsector E2.</b> Concrete and Gypsum Product Manufacturers (SIC 3271-3275)	Total Suspended Solids (TSS)	100 mg/L
	Total Iron	1.0 mg/L

**6. Effluent Limitations Based on Effluent Limitations Guidelines (see also Part I.A.1.a)**

Table E-2 identifies effluent limits that apply to the industrial activities described below. Compliance with these limits is to be determined based on discharges from these industrial activities independent of commingling with any other waste streams that may be covered under this permit.

**Table E-2<sup>1</sup>**

<b>Industrial Activity</b>	<b>Parameter</b>	<b>Effluent Limit</b>
Discharges from material storage piles at cement manufacturing facilities	Total Suspended Solids (TSS)	50 mg/L, daily maximum
	pH	6.0 - 9.0 s.u.

<sup>1</sup>Monitor annually.

## **F. Sector F – Primary Metals**

The permittee must comply with Part III sector-specific requirements associated with the facility's primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee's facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

### **1. Covered Stormwater Discharges.**

The requirements in Sector F apply to stormwater discharges associated with industrial activity from Primary Metals facilities, as identified by the SIC Codes specified under Sector F in Table A-1 of Appendix A of the permit.

### **2. Additional Practice-Based Effluent Limits**

- a. Good Housekeeping Measures. (See also Part I.D.1.b) As part of the facility's good housekeeping program, include a cleaning and maintenance program for all impervious areas of the facility where particulate matter, dust, or debris may accumulate, especially areas where material loading and unloading, storage, handling, and processing occur; and, where practicable, the paving of areas where vehicle traffic or material storage occur but where vegetative or other stabilization methods are not practicable (institute a sweeping program in these areas too). For unstabilized areas where sweeping is not practicable, consider using stormwater management devices such as sediment traps, vegetative buffer strips, filter fabric fence, sediment filtering boom, gravel outlet protection, or other equivalent measures that effectively trap or remove sediment.

### **3. Additional SWMP Requirements. (see also Part I.F)**

- a. Drainage Area Site Map. Identify in the SWMP where any of the following activities may be exposed to precipitation or surface runoff: storage or disposal of wastes such as spent solvents and baths, sand, slag and dross; liquid storage tanks and drums; processing areas including pollution control equipment (e.g., baghouses); and storage areas of raw material such as coal, coke, scrap, sand, fluxes, refractories, or metal in any form. In addition, indicate where an accumulation of significant amounts of particulate matter could occur from such sources as furnace or oven emissions, losses from coal and coke handling operations, etc., and could result in a discharge of pollutants to waters of the United States.
- b. Inventory of Exposed Material. Include in the inventory of materials handled at the site that potentially may be exposed to precipitation or runoff, areas where deposition of particulate matter from process air emissions or losses during material-handling activities are possible

### **4. Additional Inspection Requirements (see also Part I.G).**

As part of conducting the permittee's quarterly facility inspections, address all potential sources of pollutants, including (if applicable) air pollution control equipment (e.g., baghouses, electrostatic precipitators, scrubbers, and cyclones), for any signs of degradation (e.g., leaks, corrosion, or improper operation) that could limit their efficiency and lead to excessive emissions. Consider monitoring air flow at inlets and outlets (or use equivalent measures) to check for leaks (e.g., particulate deposition) or blockage in ducts. Also inspect all process and material handling equipment (e.g., conveyors, cranes, and vehicles) for leaks, drips, or the potential loss of material; and material storage areas (e.g., piles, bins, or hoppers for storing coke, coal, scrap, or slag, as well as chemicals stored in tanks and drums) for signs of material losses due to wind or stormwater runoff.

**5. Sector-Specific Benchmarks.**

**Table .F-1.**

<b>Subsector (The permittee may be subject to requirements for more than one sector/subsector)</b>	<b>Parameter</b>	<b>Benchmark Monitoring Cutoff Concentration</b>
<b>Subsector F1.</b> Steel Works, Blast Furnaces, and Rolling and Finishing Mills (SIC 3312-3317)	Total Aluminum	0.75 mg/L
	Total Zinc <sup>1</sup>	Hardness Dependent
<b>Subsector F2.</b> Iron and Steel Foundries (SIC 3321-3325)	Total Aluminum	0.75 mg/L
	Total Suspended Solids (TSS)	100 mg/L
	Total Copper <sup>1</sup>	Hardness Dependent
	Total Iron	1.0 mg/L
	Total Zinc <sup>1</sup>	Hardness Dependent
<b>Subsector F3.</b> Rolling, Drawing, and Extruding of Nonferrous Metals (SIC 3351-3357)	Total Copper <sup>1</sup>	Hardness Dependent
	Total Zinc <sup>1</sup>	Hardness Dependent
<b>Subsector F4.</b> Nonferrous Foundries (SIC 3363-3369)	Total Copper <sup>1</sup>	Hardness Dependent
	Total Zinc <sup>1</sup>	Hardness Dependent

<sup>1</sup> The benchmark values of some metals are dependent on water hardness. The ranges occur in 25 mg/L increments. Hardness Dependent Benchmarks follow in the table below:

<b>Water Hardness Range</b>	<b>Copper (mg/L)</b>	<b>Zinc (mg/L)</b>
0-25 mg/L	0.0038	0.04
25-50 mg/L	0.0056	0.05
50-75 mg/L	0.0090	0.08
75-100 mg/L	0.0123	0.11
100-125 mg/L	0.0156	0.13
125-150 mg/L	0.0189	0.16
150-175 mg/L	0.0221	0.18
175-200 mg/L	0.0253	0.20
200-225 mg/L	0.0285	0.23
225-250 mg/L	0.0316	0.25
250+ mg/L	0.0332	0.26

## **I. Sector I – Oil and Gas Extraction**

The permittee must comply with Part III sector-specific requirements associated with the facility's primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee's facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

### **1. Covered Stormwater Discharges.**

The requirements in Sector I apply to stormwater discharges associated with industrial activity from Oil and Gas Extraction facilities as identified by the SIC Codes specified under Sector I in Table A-1 of Appendix A of the permit. Discharges of stormwater runoff from field activities or operations associated with oil and gas exploration, production, processing, or treatment operations or transmission facilities are exempt from CDPS permit coverage unless, in accordance with 40 CFR 122.26(c)(1)(iii), the facility:

- Has had a discharge of stormwater resulting in the discharge of a reportable quantity for which notification is or was required pursuant to 40 CFR 117.21 or 40 CFR 302.6 at any time since November 16, 1987; or
- Has had a discharge of stormwater resulting in the discharge of a reportable quantity for which notification is or was required pursuant to 40 CFR 110.6 at any time since November 16, 1987; or
- Contributes to a violation of a water quality standard.

Any stormwater discharges that require permit coverage as a result of meeting one of the conditions of 122.26(c)(1)(iii) may be covered under this permit unless otherwise required to obtain coverage under an alternative CDPS general permit or an individual CDPS permit as specified in Part I.A.3.c.

### **2. Limitations on Coverage.**

- a. Stormwater Discharges Subject to Effluent Limitation Guidelines. (See also Part I.A.2.e) This permit does not authorize stormwater discharges from petroleum drilling operations that are subject to nationally established effluent limitation guidelines found at 40 CFR Part 435, respectively.
- b. Non-Stormwater Discharges. This permit does not authorize discharges of vehicle and equipment wash water, including tank-cleaning operations. Alternatively, wash water discharges must be authorized under a separate CDPS permit, or be discharged to a sanitary sewer in accordance with applicable industrial pretreatment requirements.

### **3. Additional Practice-Based Effluent Limits.**

- a. Vegetative Controls. Implement vegetative practices designed to preserve existing vegetation, where attainable, and revegetate open areas as soon as practicable after grade drilling. Consider the following (or equivalent measures): temporary or permanent seeding, mulching, sod stabilization, vegetative buffer strips, and tree protection practices. Begin implementing appropriate vegetative practices on all disturbed areas within 14 days following the last activity in that area.

### **4. Additional SWMP Requirements. (see also Part I.F)**

- a. Drainage Area Site Map. Document in the facility's SWMP where any of the following may be exposed to precipitation or surface runoff: Reportable Quantity (RQ) releases; locations used for the treatment, storage, or disposal of wastes; processing areas and storage areas; chemical mixing areas; construction and drilling areas; all areas subject to the effluent guidelines requirements for "No Discharge" in accordance with 40 CFR 435.32; and the structural controls to achieve compliance with the "No Discharge" requirements.
- b. Potential Pollutant Sources. In addition, document in the facility's SWMP the following sources and activities that have potential pollutants associated with them: chemical, cement, mud, or gel mixing activities; drilling or mining activities; and equipment cleaning and rehabilitation activities. In addition, include information about the

reportable quantity (RQ) release that triggered the permit application requirements: the nature of the release (e.g., spill of oil from a drum storage area), amount of oil or hazardous substance released, amount of substance recovered, date of the release, cause of the release (e.g., poor handling techniques and lack of containment in the area), areas affected by the release (i.e., land and water), procedure to clean up release, actions or procedures implemented to prevent or improve response to a release, and remaining potential contamination of stormwater from release (taking into account human health risks, the control of drinking water intakes, and the designated uses of the receiving water).

- c. Erosion and Sedimentation Control. Unless covered by the current General Permit for Stormwater Discharges Associated with Construction Activity, the additional documentation requirements for sediment and erosion controls for well drillings and sand/shale mining areas include the following:
- i. *Site Description*. Also include a description in the facility's SWMP of the nature of the exploration activity, estimates of the total area of site and area disturbed due to exploration activity, an estimate of runoff coefficient of the site, a site drainage map, including approximate slopes, and the names of all receiving waters.
  - ii. *Vegetative Controls*. Document vegetative practices used consistent with Part III.I.3 in the SWMP.

#### **5. Additional Inspection Requirements (see also Part I.G).**

All erosion and sedimentation control measures must be inspected every 7 days.

## **K. Sector K – Hazardous Waste Treatment, Storage, or Disposal Facilities**

The permittee must comply with Part III sector-specific requirements associated with the facility's primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee's facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

### **1. Covered Stormwater Discharges.**

The requirements in Sector K apply to stormwater discharges associated with industrial activity from Hazardous Waste Treatment, Storage, or Disposal facilities (TSDFs) as identified by the Activity Code specified under Sector K in Table A-1 of Appendix A of the permit.

### **2. Industrial Activities Covered by Sector K.**

This permit authorizes stormwater discharges associated with industrial activity from facilities that treat, store, or dispose of hazardous wastes, including those that are operating under interim status or a permit under subtitle C of RCRA. Disposal facilities that have been properly closed and capped, and have no significant materials exposed to stormwater, are considered inactive and do not require permits.

### **3. Limitations on Coverage.**

- a. Prohibition of Non-Stormwater Discharges. (See also Part I.A.2) The following are not authorized by this permit: leachate, gas collection condensate, drained free liquids; contaminated ground water, laboratory-derived wastewater, and contact wash water from washing truck and railcar exteriors and surface areas that have come indirect contact with solid waste at the landfill facility.

### **4. Definitions.**

- a. Contaminated stormwater - stormwater that comes into direct contact with landfill wastes, the waste handling and treatment areas, or landfill wastewater as defined in Part III.K.4.d. Some specific areas of a landfill that may produce contaminated stormwater include (but are not limited to) the open face of an active landfill with exposed waste (no cover added); the areas around wastewater treatment operations; trucks, equipment, or machinery that has been in direct contact with the waste; and waste dumping areas.
- b. Drained free liquids - aqueous wastes drained from waste containers (e.g., drums) prior to landfilling.
- c. Landfill - an area of land or an excavation in which wastes are placed for permanent disposal, but that is not a land application or land treatment unit, surface impoundment, underground injection well, waste pile, salt dome formation, salt bed formation, underground mine, or cave as these terms are defined in 40 CFR 257.2, 258.2, and 260.10.
- d. Landfill wastewater - as defined in 40 CFR Part 445 (Landfills Point Source Category), all wastewater associated with, or produced by, landfilling activities except for sanitary wastewater, non-contaminated stormwater, contaminated groundwater, and wastewater from recovery pumping wells. Landfill wastewater includes, but is not limited to, leachate, gas collection condensate, drained free liquids, laboratory derived wastewater, contaminated stormwater, and contact wash water from washing truck, equipment, and railcar exteriors and surface areas that have come in direct contact with solid waste at the landfill facility.
- e. Leachate - liquid that has passed through or emerged from solid waste and contains soluble, suspended, or miscible materials removed from such waste.
- f. Non-contaminated stormwater - stormwater that does not come into direct contact with landfill wastes, the waste handling and treatment areas, or landfill wastewater as defined in Part III.K.4.d. Non-contaminated stormwater

includes stormwater that flows off the cap, cover, intermediate cover, daily cover, and/or final cover of the landfill.

### 5. Sector-Specific Benchmarks

Table K-1 identifies benchmarks that apply to the specific subsectors of Sector K. These benchmarks apply to both the facility's primary industrial activity and any co-located industrial activities, which describe the permittee's site activities.

<b>Table K-1.</b>		
<b>Subsector (The permittee may be subject to requirements for more than one sector/subsector)</b>	<b>Parameter</b>	<b>Benchmark Monitoring Concentration</b>
<b>Subsector K1.</b> ALL - Industrial Activity Code "HZ". Benchmarks only applicable to discharges not subject to effluent limitations in 40 CFR Part 445 Subpart A (see below).	Ammonia	2.14 mg/L
	Total Magnesium	0.064 mg/L
	Chemical Oxygen Demand (COD)	120 mg/L
	Total Arsenic	0.15 mg/L
	Total Cadmium <sup>1</sup>	Hardness Dependent
	Total Cyanide	0.022 mg/ L
	Total Lead <sup>1</sup>	Hardness Dependent
	Total Mercury	0.0014 mg/ L
	Total Selenium	0.005 mg/L
	Total Silver <sup>1</sup>	Hardness Dependent

<sup>1</sup> The benchmark values of some metals are dependent on water hardness. The ranges occur in 25 mg/L increments. Hardness Dependent Benchmarks follow in the table below:

<b>Water Hardness Range</b>	<b>Cadmium (mg/L)</b>	<b>Lead (mg/L)</b>	<b>Silver (mg/L)</b>
0-25 mg/L	0.0005	0.014	0.0007
25-50 mg/L	0.0008	0.023	0.0007
50-75 mg/L	0.0013	0.045	0.0017
75-100 mg/L	0.0018	0.069	0.0030
100-125 mg/L	0.0023	0.095	0.0046
125-150 mg/L	0.0029	0.122	0.0065
150-175 mg/L	0.0034	0.151	0.0087
175-200 mg/L	0.0039	0.182	0.0112
200-225 mg/L	0.0045	0.213	0.0138
225-250 mg/L	0.0050	0.246	0.0168
250+ mg/L	0.0053	0.262	0.0183

**6. Effluent Limitations Based on Effluent Limitations Guidelines (see also Part I.A.1.a)**

Table K-2 identifies effluent limits that apply to the industrial activities described below. Compliance with these effluent limits is to be determined based on discharges from these industrial activities independent of commingling with any other waste streams that may be covered under this permit.

**Table K-2<sup>1</sup>**

<b>Industrial Activity</b>	<b>Parameter</b>	<b>Effluent Limit</b>
Discharges from hazardous waste landfills subject to effluent limitations in 40 CFR Part 445 Subpart A (see footnote).	Biochemical Oxygen Demand (BOD <sub>5</sub> )	220 mg/L, daily maximum
		56 mg/L, monthly avg. maximum
	Total Suspended Solids (TSS)	88 mg/L, daily maximum
		27 mg/L, monthly avg. maximum
	Ammonia	10 mg/L, daily maximum
		4.9 mg/L, monthly avg. maximum
	Alpha Terpineol	0.042 mg/L, daily maximum
		0.019 mg/L, monthly avg. maximum
	Aniline	0.024 mg/L, daily maximum
		0.015 mg/L, monthly avg. maximum
	Benzoic Acid	0.119 mg/L, daily maximum
		0.073 mg/L, monthly avg. maximum
	Naphthalene	0.059 mg/L, daily maximum
		0.022 mg/L, monthly avg. maximum
	p-Cresol	0.024 mg/L, daily maximum
		0.015 mg/L, monthly avg. maximum
	Phenol	0.048 mg/L, daily maximum
		0.029 mg/L, monthly avg. maximum
	Pyridine	0.072 mg/L, daily maximum
		0.025 mg/L, monthly avg. maximum
Total Arsenic	1.1 mg/L, daily maximum	
	0.54 mg/L, monthly avg. maximum	
Total Chromium	1.1 mg/L, daily maximum	
	0.46 mg/L, monthly avg. maximum	
Total Zinc	0.535 mg/L, daily maximum	
	0.296 mg/L, monthly avg. maximum	
	pH	Within the range of 6-9 standard pH units (s.u.)

<sup>1</sup> Monitor annually. As set forth at 40 CFR Part 445 Subpart A, these numeric limitations apply to contaminated stormwater discharges from hazardous waste landfills subject to the provisions of RCRA Subtitle C at 40 CFR Parts 264 (Subpart N) and 265 (Subpart N) except for any of the following facilities:

- (a) landfills operated in conjunction with other industrial or commercial operations when the landfill receives only wastes generated by the industrial or commercial operation directly associated with the landfill;
- (b) landfills operated in conjunction with other industrial or commercial operations when the landfill receives wastes generated by the industrial or commercial operation directly associated with the landfill and also receives other wastes, provided that the other wastes received for disposal are generated by a facility that is subject to the same provisions in 40 CFR Subchapter N as the industrial or commercial operation or that the other wastes received are of similar nature to the wastes generated by the industrial or commercial operation;
- (c) Landfills operated in conjunction with Centralized Waste Treatment (CWT) facilities subject to 40 CFR Part 437, so long as the CWT facility commingles the landfill wastewater with other non-landfill wastewater for discharge. A landfill directly associated with a CWT facility is subject to this part if the CWT facility discharges landfill wastewater separately from other CWT wastewater or commingles the wastewater from its landfill only with wastewater from other landfills; or
- (d) landfills operated in conjunction with other industrial or commercial operations when the landfill receives wastes from public service activities, so long as the company owning the landfill does not receive a fee or other remuneration for the disposal service.

## **L. Sector L – Landfills, Land Application Sites, and Open Dumps**

The permittee must comply with Part III sector-specific requirements associated with the facility's primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee's facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

### **1. Covered Stormwater Discharges.**

The requirements in Sector L apply to stormwater discharges associated with industrial activity from Landfills and Land Application Sites and Open Dumps as identified by the Activity Code specified under Sector L in Table A-1 of Appendix A of the permit.

### **2. Industrial Activities Covered by Sector L.**

This permit may authorize stormwater discharges for Sector L facilities associated with waste disposal at landfills, land application sites, and open dumps that receive or have received industrial waste, as defined at 5 CCR 1002-61.3(2)(e)(iii)(E), including sites subject to regulation under Subtitle D of RCRA. This permit does not cover discharges from landfills that receive only municipal wastes, unless otherwise designated by the Division in accordance with Part I.A.1.a.ii of this permit.

### **3. Limitations on Coverage.**

- a. Prohibition of Non-Stormwater Discharges. (See also Part I.A.2) The following discharges are not authorized by this permit: leachate, gas collection condensate, drained free liquids; contaminated ground water, laboratory wastewater, and contact wash water from washing truck and railcar exteriors and surface areas that have come in direct contact with solid waste at the landfill facility.

### **4. Definitions.**

- a. Contaminated stormwater - stormwater that comes into direct contact with landfill wastes, the waste handling and treatment areas, or landfill wastewater. Some areas of a landfill that may produce contaminated stormwater include (but are not limited to) the open face of an active landfill with exposed waste (no cover added); the areas around wastewater treatment operations; trucks, equipment, or machinery that has been in direct contact with the waste; and waste dumping areas.
- b. Drained free liquids - aqueous wastes drained from waste containers (e.g., drums) prior to landfilling.
- c. Landfill wastewater - as defined in 40 CFR Part 445 (Landfills Point Source Category) all wastewater associated with, or produced by, landfilling activities except for sanitary wastewater, non-contaminated stormwater, contaminated groundwater, and wastewater from recovery pumping wells. Landfill process wastewater includes, but is not limited to, leachate; gas collection condensate; drained free liquids; laboratory-derived wastewater; contaminated stormwater; and contact wash water from washing truck, equipment, and railcar exteriors and surface areas that have come in direct contact with solid waste at the landfill facility.
- d. Leachate - liquid that has passed through or emerged from solid waste and contains soluble, suspended, or miscible materials removed from such waste.
- e. Non-contaminated stormwater - stormwater that does not come into direct contact with landfill wastes, the waste handling and treatment areas, or landfill wastewater. Non-contaminated stormwater includes stormwater that flows off the cap, cover, intermediate cover, daily cover, and/or final cover of the landfill.

**5. Additional Practice-Based Effluent Limits. (see also Part I.D.1)**

- a. Preventive Maintenance Program. As part of the facility's preventive maintenance program, maintain the following: all elements of leachate collection and treatment systems, to prevent commingling of leachate with stormwater; the integrity and effectiveness of any intermediate or final cover (including repairing the cover as necessary), to minimize the effects of settlement, sinking, and erosion.
- b. Erosion and Sedimentation Control. Provide temporary stabilization (e.g., temporary seeding, mulching, and placing geotextiles on the inactive portions of stockpiles) for the following: materials stockpiled for daily, intermediate, and final cover; inactive areas of the landfill or open dump; landfills or open dump areas that have gotten final covers but where vegetation has yet to establish itself; and land application sites where waste application has been completed but final vegetation has not yet been established.
- c. Unauthorized Discharge Test Certification. The discharge test and certification must also be conducted for the presence of leachate and vehicle wash water.

**6. Additional SWMP Requirements. (see also Part I.F)**

- a. Drainage Area Site Map. Document in the facility's SWMP where any of the following may be exposed to precipitation or surface runoff: active and closed landfill cells or trenches, active and closed land application areas, locations where open dumping is occurring or has occurred, locations of any known leachate springs or other areas where uncontrolled leachate may commingle with runoff, and leachate collection and handling systems.
- b. Summary of Potential Pollutant Sources. Document in the facility's SWMP the following sources and activities that have potential pollutants associated with them: fertilizer, herbicide, and pesticide application; earth and soil moving; waste hauling and loading or unloading; outdoor storage of significant materials, including daily, interim, and final cover material stockpiles as well as temporary waste storage areas; exposure of active and inactive landfill and land application areas; uncontrolled leachate flows; and failure or leaks from leachate collection and treatment systems.

**7. Additional Inspection Requirements (see also Part I.G)**

- a. Inspections of Active Sites. Inspect operating landfills, open dumps, and land application sites at least once every month. Focus on areas of landfills that have not yet been finally stabilized; active land application areas, areas used for storage of material and wastes that are exposed to precipitation, stabilization, and structural control measures; leachate collection and treatment systems; and locations where equipment and waste trucks enter and exit the site. Ensure that sediment and erosion control measures are operating properly. For stabilized sites and areas where land application has been completed, conduct inspections at least once every quarter, consistent with Part I.G of the permit.
- b. Inspections of Inactive Sites. Inspect inactive landfills, open dumps, and land application sites at least quarterly, consistent with Part I.G of the permit. Qualified personnel must inspect landfill (or open dump) stabilization and structural erosion control measures, leachate collection and treatment systems, and all closed land application areas.

**8. Additional Post-Authorization Documentation Requirements.**

- a. Recordkeeping and Internal Reporting. Keep records with the facility's SWMP of the types of wastes disposed of in each cell or trench of a landfill or open dump. For land application sites, track the types and quantities of wastes applied in specific areas.

## 9. Sector-Specific Benchmarks

Table L-1 identifies benchmarks that apply to the specific subsectors of Sector L. These benchmarks apply to both the facility's primary industrial activity and any co-located industrial activities, which describe the site activities.

<b>Table L-1.</b>		
<b>Subsector (The permittee may be subject to requirements for more than one sector/subsector)</b>	<b>Parameter</b>	<b>Benchmark Monitoring Concentration<sup>1</sup></b>
<b>Subsector L1.</b> All Landfill, Land Application Sites and Open Dumps (Industrial Activity Code "LF")	Total Suspended Solids (TSS)	100 mg/L
<b>Subsector L2.</b> All Landfill, Land Application Sites and Open Dumps, except Municipal Solid Waste Landfill (MSWLF) Areas Closed in Accordance with 40 CFR 258.60 (Industrial Activity Code "LF")	Total Iron	1.0 mg/L

<sup>1</sup>Benchmark monitoring required only for discharges not subject to effluent limitations in 40 CFR Part 445 Subpart B (see Table L-2 above).

## 10. Effluent Limitations Based on Effluent Limitations Guidelines (see also Part I.A.1.a)

Table L-2 identifies effluent limits that apply to the industrial activities described below. Compliance with these effluent limits is to be determined based on discharges from these industrial activities independent of commingling with any other waste streams that may be covered under this permit.

<b>Table L-2<sup>1</sup></b>		
<b>Industrial Activity</b>	<b>Parameter</b>	<b>Effluent Limit</b>
Discharges from non-hazardous waste landfills subject to effluent limitations in 40 CFR Part 445 Subpart B.	Biochemical Oxygen Demand (BOD <sub>5</sub> )	140 mg/L, daily maximum
		37 mg/L, monthly avg. maximum
	Total Suspended Solids (TSS)	88 mg/L, daily maximum
		27 mg/L, monthly avg. maximum
	Ammonia	10 mg/L, daily maximum
		4.9 mg/L, monthly avg. maximum
	Alpha Terpineol	0.033 mg/L, daily maximum
		0.016 mg/L monthly avg. maximum
	Benzoic Acid	0.12 mg/L, daily maximum
		0.071 mg/L, monthly avg. maximum
	p-Cresol	0.025 mg/L, daily maximum
		0.014 mg/L, monthly avg. maximum
	Phenol	0.026 mg/L, daily maximum
0.015 mg/L, monthly avg. maximum		
Total Zinc	0.20 mg/L, daily maximum	
	0.11 mg/L, monthly avg. maximum	
pH	Within the range of 6-9 standard pH units (s.u.)	

<sup>1</sup> Monitor annually. As set forth at 40 CFR Part 445 Subpart B, these numeric limitations apply to contaminated stormwater discharges from MSWLFs that have not been closed in accordance with 40 CFR 258.60, and to contaminated stormwater discharges from those landfills that are subject to the provisions of 40 CFR Part 257 except for discharges from any of the following facilities:

- (a) landfills operated in conjunction with other industrial or commercial operations, when the landfill receives only wastes generated by the industrial or commercial operation directly associated with the landfill;
- (b) landfills operated in conjunction with other industrial or commercial operations, when the landfill receives wastes generated by the industrial or commercial operation directly associated with the landfill and also receives other wastes, provided that the other wastes received for disposal are generated by a facility that is subject to the same provisions in 40 CFR Subchapter N as the industrial or commercial operation, or that the other wastes received are of similar nature to the wastes generated by the industrial or commercial operation;
- (c) landfills operated in conjunction with CWT facilities subject to 40 CFR Part 437, so long as the CWT facility commingles the landfill wastewater with other non-landfill wastewater for discharge. A landfill directly associated with a CWT facility is subject to this part if the CWT facility discharges landfill wastewater separately from other CWT wastewater or commingles the wastewater from its landfill only with wastewater from other landfills; or
- (d) landfills operated in conjunction with other industrial or commercial operations when the landfill receives wastes from public service activities, so long as the company owning the landfill does not receive a fee or other remuneration for the disposal service.

## **M. Sector M – Automobile Salvage Yards**

The permittee must comply with Part III sector-specific requirements associated with the facility's primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee's facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

### **1. Covered Stormwater Discharges.**

The requirements in Sector M apply to stormwater discharges associated with industrial activity from Automobile Salvage Yards as identified by the SIC Code specified under Sector M in Table A-1 of Appendix A of this permit.

### **2. Additional Practice-Based Effluent Limits. (see also Part I.D.1)**

- a. **Minimize Exposure.** Consider the following exposure minimization practices: remove mercury switches, batteries and wheel weights from vehicles upon arrival at the site (or as soon thereafter as feasible)
- b. **Spill and Leak Prevention Procedures.** Drain vehicles intended to be dismantled of all fluids upon arrival at the site (or as soon thereafter as feasible), or employ some other equivalent means to prevent spills and leaks.
- c. **Employee Training.** If applicable to the permittee's facility, address the following areas (at a minimum) in the permittee's employee training program: proper handling (collection, storage, and disposal) of oil, used mineral spirits, anti-freeze, mercury switches, batteries and solvents.
- d. **Management of Runoff.** Consider the following management practices: berms or drainage ditches on the property line (to help prevent run-on from neighboring properties); berms for uncovered outdoor storage of oily parts, engine blocks, and above-ground liquid storage; installation of detention ponds; and installation of filtering devices and oil and water separators.

### **3. Additional SWMP Requirements. (see also Part I.F)**

- a. **Drainage Area Site Map.** Identify locations used for dismantling, storage, and maintenance of used motor vehicle parts. Also, identify where any of the following may be exposed to precipitation or surface runoff: dismantling areas, parts (e.g., engine blocks, tires, hubcaps, batteries, hoods, mufflers) storage areas, and liquid storage tanks and drums for fuel and other fluids.
- b. **Potential Pollutant Sources.** Assess the potential for the following to contribute pollutants to stormwater discharges: vehicle storage areas, dismantling areas, parts storage areas (e.g., engine blocks, tires, hubcaps, batteries, hoods, mufflers), and fueling stations.

### **4. Additional Inspection Requirements (see also Part I.G)**

Immediately (or as soon thereafter as feasible), inspect vehicles arriving at the site for leaks. Inspect quarterly for signs of leakage all equipment containing oily parts, hydraulic fluids, any other types of fluids, or mercury switches. Also, inspect quarterly for signs of leakage all vessels and areas where hazardous materials and general automotive fluids are stored, including, but not limited to, mercury switches, brake fluid, transmission fluid, radiator water, and antifreeze.

### **5. Sector-Specific Benchmarks.**

**Table M-1.**

<b>Subsector (The permittee may be subject to requirements for more than one sector/subsector)</b>	<b>Parameter</b>	<b>Benchmark Monitoring Concentration</b>
<b>Subsector M1.</b> Automobile Salvage Yards (SIC 5015)	Total Suspended Solids (TSS)	100 mg/L
	Total Aluminum	0.75 mg/L
	Total Iron	1.0 mg/L
	Total Lead <sup>1</sup>	Hardness Dependent

<sup>1</sup> The benchmark values of some metals are dependent on water hardness. The ranges occur in 25 mg/L increments. Hardness Dependent Benchmarks follow in the table below:

<b>Water Hardness Range</b>	<b>Lead (mg/L)</b>
0-25 mg/L	0.014
25-50 mg/L	0.023
50-75 mg/L	0.045
75-100 mg/L	0.069
100-125 mg/L	0.095
125-150 mg/L	0.122
150-175 mg/L	0.151
175-200 mg/L	0.182
200-225 mg/L	0.213
225-250 mg/L	0.246
250+ mg/L	0.262

## N. Sector N – Scrap Recycling and Waste Recycling Facilities

The permittee must comply with Part III sector-specific requirements associated with the facility's primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee's facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

### 1. Covered Stormwater Discharges.

The requirements in Sector N apply to stormwater discharges associated with industrial activity from Scrap Recycling and Waste Recycling facilities as identified by the SIC Code specified under Sector N in Table A-1 of Appendix A of the permit.

### 2. Limitation on Coverage.

Separate permit requirements have been established for recycling facilities that only receive source-separated recyclable materials primarily from non-industrial and residential sources (i.e., common consumer products including paper, newspaper, glass, cardboard, plastic containers, and aluminum and tin cans). This includes recycling facilities commonly referred to as material recovery facilities (MRF).

- a. Prohibition of Non-Stormwater Discharges. (See also Part I.A.2) Non-stormwater discharges from turnings containment areas are not covered by this permit. Discharges from containment areas in the absence of a storm event are prohibited unless covered by a separate CDPS permit.

### 3. Additional Practice-Based Effluent Limits. (see also Part I.D.1)

- a. Scrap and Waste Recycling Facilities (Non-Source Separated, Nonliquid Recyclable Materials). Requirements for facilities that receive, process, and do wholesale distribution of nonliquid recyclable wastes (e.g., ferrous and nonferrous metals, plastics, glass, cardboard, and paper). These facilities may receive both nonrecyclable and recyclable materials. This section is not intended for those facilities that accept recyclables only from primarily non-industrial and residential sources.
  - i. Inbound Recyclable and Waste Material Control Program. Minimize the chance of accepting materials that could be significant sources of pollutants by conducting inspections of inbound recyclables and waste materials. Following are some control measure options: (a) provide information and education to suppliers of scrap and recyclable waste materials on draining and properly disposing of residual fluids (e.g., from vehicles and equipment engines, radiators and transmissions, oil filled transformers, and individual containers or drums) and removal of mercury switches from vehicles before delivery to the permittee's facility; (b) consider removing mercury switches, batteries and wheel weights from vehicles upon arrival at the site (or as soon thereafter as feasible) (c) establish procedures to minimize the potential of any residual fluids from coming into contact with precipitation or runoff; (d) establish procedures for accepting scrap lead-acid batteries (additional requirements for the handling, storage, and disposal or recycling of batteries are contained in the scrap lead-acid battery program provisions in Part III.N.3.a.vi); (e) provide training targeted for those personnel engaged in the inspection and acceptance of inbound recyclable materials; and (f) establish procedures to ensure that liquid wastes, including used oil, are stored in materially compatible and non-leaking containers and are disposed of or recycled in accordance with the Resource Conservation and Recovery Act (RCRA).
  - ii. Scrap and Waste Material Stockpiles and Storage (Outdoor). Minimize contact of stormwater runoff with stockpiled materials, processed materials, and nonrecyclable wastes. Following are some control measure options: (a) permanent or semi-permanent covers; (b) sediment traps, vegetated swales and strips, catch basin filters, and sand filters to facilitate settling or filtering of pollutants; (c) dikes, berms, containment trenches, culverts, and surface grading to divert runoff from storage areas; (d) silt fencing; and (e) oil and water separators, sumps, and dry absorbents for areas where potential sources of residual fluids are stockpiled (e.g., automobile engine storage areas).

- 
- iii. Stockpiling of Turnings Exposed to Cutting Fluids (Outdoor Storage). Minimize contact of surface runoff with residual cutting fluids by: (a) storing all turnings exposed to cutting fluids under some form of permanent or semi-permanent cover, or (b) establishing dedicated containment areas for all turnings that have been exposed to cutting fluids. Any containment areas must be constructed of concrete, asphalt, or other equivalent types of impermeable material and include a barrier (e.g., berms, curbing, elevated pads) to prevent contact with stormwater run-on. Stormwater runoff from these areas can be discharged, provided that any runoff is first collected and treated by an oil and water separator or its equivalent. The permittee must regularly maintain the oil and water separator (or its equivalent) and properly dispose of or recycle collected residual fluids.
- iv. Scrap and Waste Material Stockpiles and Storage (Covered or Indoor Storage). Minimize contact of residual liquids and particulate matter from materials stored indoors or under cover with surface runoff. Following are some control measure options: (a) good housekeeping measures, including the use of dry absorbents or wet vacuuming to contain, dispose of, or recycle residual liquids originating from recyclable containers, or mercury spill kits for spills from storage of mercury switches; (b) not allowing wash water from tipping floors or other processing areas to discharge to the storm sewer system; and (c) disconnecting or sealing off all floor drains connected to the storm sewer system.
- v. Scrap and Recyclable Waste Processing Areas. Minimize surface runoff from coming in contact with scrap processing equipment. Pay attention to operations that generate visible amounts of particulate residue (e.g., shredding) to minimize the contact of accumulated particulate matter and residual fluids with runoff (i.e., through good housekeeping, preventive maintenance, etc.). Following are some control measure options: (a) regularly inspect equipment for spills or leaks and malfunctioning, worn, or corroded parts or equipment; (b) establish a preventive maintenance program for processing equipment; (c) use dry-absorbents or other cleanup practices to collect and dispose of or recycle spilled or leaking fluids or use mercury spill kits for spills from storage of mercury switches; (d) on unattended hydraulic reservoirs over 150 gallons in capacity, install protection devices such as low-level alarms or equivalent devices, or secondary containment that can hold the entire volume of the reservoir; (e) containment or diversion structures such as dikes, berms, culverts, trenches, elevated concrete pads, and grading to minimize contact of stormwater runoff with outdoor processing equipment or stored materials; (f) oil and water separators or sumps; (g) permanent or semi-permanent covers in processing areas where there are residual fluids and grease; (h) retention or detention ponds or basins; sediment traps, and vegetated swales or strips (for pollutant settling and filtration); (i) catch basin filters or sand filters.
- vi. Scrap Lead-Acid Battery Program. Properly handle, store, and dispose of scrap lead-acid batteries. Following are some control measure options (a) segregate scrap lead-acid batteries from other scrap materials; (b) properly handle, store, and dispose of cracked or broken batteries; (c) collect and dispose of leaking lead-acid battery fluid; (d) minimize or eliminate (if possible) exposure of scrap lead-acid batteries to precipitation or runoff; and (e) provide employee training for the management of scrap batteries.
- vii. Spill Prevention and Response Procedures. Install alarms and/or pump shutoff systems on outdoor equipment with hydraulic reservoirs exceeding 150 gallons in the event of a line break. Alternatively, a secondary containment system capable of holding the entire contents of the reservoir plus room for precipitation can be used. Use a mercury spill kit for any release of mercury from switches, anti-lock brake systems, and switch storage areas.
- viii. Supplier Notification Program. As appropriate, notify major suppliers, which scrap materials will not be accepted at the facility or will be accepted only under certain conditions.

- b. Waste Recycling Facilities (Liquid Recyclable Materials).
- i. Waste Material Storage (Indoor). Minimize or eliminate contact between residual liquids from waste materials stored indoors and from surface runoff. The plan may refer to applicable portions of other existing plans, such as Spill Prevention, Control, and Countermeasure (SPCC) plans required under 40 CFR Part 112. Following are some control measure options (a) procedures for material handling (including labeling and marking); (b) clean up spills and leaks with dry absorbent materials, a wet vacuum system; (c) appropriate containment structures (trenching, curbing, gutters, etc.); and (d) a drainage system, including appurtenances (e.g., pumps or ejectors, manually operated valves), to handle discharges from diked or bermed areas. Drainage should be discharged to an appropriate treatment facility or sanitary sewer system, or otherwise disposed of properly. These discharges may require coverage under a separate CDPS wastewater permit or industrial user permit under the pretreatment program.
  - ii. Waste Material Storage (Outdoor). Minimize contact between stored residual liquids and precipitation or runoff. The plan may refer to applicable portions of other existing plans, such as SPCC plans required under 40 CFR Part 112. Discharges of precipitation from containment areas containing used oil must also be in accordance with applicable sections of 40 CFR Part 112. Following are some control measure options (a) appropriate containment structures (e.g., dikes, berms, curbing, pits) to store the volume of the largest tank, with sufficient extra capacity for precipitation; (b) drainage control and other diversionary structures; (c) corrosion protection and/or leak detection systems for storage tanks; and (d) dry-absorbent materials or a wet vacuum system to collect spills.
  - iii. Trucks and Rail Car Waste Transfer Areas. Minimize pollutants in discharges from truck and rail car loading and unloading areas. Include measures to clean up minor spills and leaks resulting from the transfer of liquid wastes. Following are two control measure options: (a) containment and diversionary structures to minimize contact with precipitation or runoff, and (b) dry clean-up methods, wet vacuuming, roof coverings, or runoff controls.
- c. Recycling Facilities (Source-Separated Materials). The following identifies considerations for facilities that receive only source-separated recyclables, primarily from non-industrial and residential sources.
- i. Inbound Recyclable Material Control. Minimize the chance of accepting nonrecyclables (e.g., hazardous materials) that could be a significant source of pollutants by conducting inspections of inbound materials. Following are some control measure options: (a) providing information and education measures to inform suppliers of recyclables about acceptable and non-acceptable materials, (b) training drivers responsible for pickup of recycled material, (c) clearly marking public drop-off containers regarding which materials can be accepted, (d) rejecting nonrecyclable wastes or household hazardous wastes at the source, and (e) establishing procedures for handling and disposal of nonrecyclable material.
  - ii. Outdoor Storage. Minimize exposure of recyclables to precipitation and runoff. Use good housekeeping measures to prevent accumulation of particulate matter and fluids, particularly in high traffic areas. Following are some control measure options (a) provide totally enclosed drop-off containers for the public; (b) install a sump and pump with each container pit and treat or discharge collected fluids to a sanitary sewer system; (c) provide dikes and curbs for secondary containment (e.g., around bales of recyclable waste paper); (d) divert surface water runoff away from outside material storage areas; (e) provide covers over containment bins, dumpsters, and roll-off boxes; and (f) store the equivalent of one day's volume of recyclable material indoors.
  - iii. Indoor Storage and Material Processing. Minimize the release of pollutants from indoor storage and processing areas. Following are some control measure options (a) schedule routine good housekeeping measures for all storage and processing areas, (b) prohibit tipping floor wash water from draining to the storm sewer system, and (c) provide employee training on pollution prevention practices.
  - iv. Vehicle and Equipment Maintenance. Following are some control measure options for areas where vehicle and equipment maintenance occur outdoors (a) prohibit vehicle and equipment wash water from discharging to the storm sewer system, (b) minimize or eliminate outdoor maintenance areas whenever

possible, (c) establish spill prevention and clean-up procedures in fueling areas, (d) avoid topping off fuel tanks, (e) divert runoff from fueling areas, (f) store lubricants and hydraulic fluids indoors, and (g) provide employee training on proper handling and storage of hydraulic fluids and lubricants.

**4. Additional SWMP Requirements. (see also Part I.F)**

- a. Drainage Area Site Map. Document in the facility’s SWMP the locations of any of the following activities or sources that may be exposed to precipitation or surface runoff: scrap and waste material storage, outdoor scrap and waste processing equipment; and containment areas for turnings exposed to cutting fluids.
- b. Maintenance Schedules/Procedures for Collection, Handling, and Disposal or Recycling of Residual Fluids at Scrap and Waste Recycling Facilities. If the permittee is subject to Part III.N.3.a.iii, the facility’s SWMP must identify any applicable maintenance schedule and the procedures to collect, handle, and dispose of or recycle residual fluids.

**5. Additional Inspection Requirements (see also Part I.G).**

- a. Inspections for Waste Recycling Facilities. The inspections must be performed monthly, and include, at a minimum, all areas where waste is generated, received, stored, treated, or disposed of and that are exposed to either precipitation or stormwater runoff.

**6. Sector-Specific Benchmarks.**

<b>Table N-1.</b>		
<b>Subsector (The permittee may be subject to requirements for more than one sector/subsector)</b>	<b>Parameter</b>	<b>Benchmark Monitoring Concentration</b>
<b>Subsector N1.</b> Scrap Recycling and Waste Recycling Facilities except Source-Separated Recycling (SIC 5093)	Chemical Oxygen Demand (COD)	120 mg/L
	Total Suspended Solids (TSS)	100 mg/L
	Total Recoverable Aluminum	0.75 mg/L
	Total Recoverable Copper <sup>1</sup>	Hardness Dependent
	Total Recoverable Iron	1.0 mg/L
	Total Recoverable Lead <sup>1</sup>	Hardness Dependent
	Total Recoverable Zinc <sup>1</sup>	Hardness Dependent

<sup>1</sup> The benchmark values of some metals are dependent on water hardness. The ranges occur in 25 mg/L increments. Hardness Dependent Benchmarks follow in the table below:

<b>Water Hardness Range</b>	<b>Copper (mg/L)</b>	<b>Lead (mg/L)</b>	<b>Zinc (mg/L)</b>
0-25 mg/L	0.0038	0.014	0.04
25-50 mg/L	0.0056	0.023	0.05
50-75 mg/L	0.0090	0.045	0.08
75-100 mg/L	0.0123	0.069	0.11
100-125 mg/L	0.0156	0.095	0.13
125-150 mg/L	0.0189	0.122	0.16
150-175 mg/L	0.0221	0.151	0.18
175-200 mg/L	0.0253	0.182	0.20
200-225 mg/L	0.0285	0.213	0.23
225-250 mg/L	0.0316	0.246	0.25
250+ mg/L	0.0332	0.262	0.26

## **O. Sector O – Steam Electric Generating Facilities**

The permittee must comply with Part III sector-specific requirements associated with the facility's primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee's facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

### **1. Covered Stormwater Discharges.**

The requirements in Sector O apply to stormwater discharges associated with industrial activity from Steam Electric Power Generating Facilities as identified by the Activity Code specified under Sector O in Table A-1 of Appendix A of the permit.

### **2. Industrial Activities Covered by Sector O.**

This permit authorizes stormwater discharges from the following industrial activities at Sector O facilities:

- a. steam electric power generation using coal, natural gas, oil, nuclear energy, etc., to produce a steam source, including coal handling areas;
- b. coal pile runoff, including effluent limitations established by 40 CFR Part 423; and
- c. dual fuel facilities that could employ a steam boiler.

### **3. Limitations on Coverage.**

- a. Prohibition of Non-Stormwater Discharges. Non-stormwater discharges subject to effluent limitations guidelines are not covered by this permit.
- b. Prohibition of Stormwater Discharges. Stormwater discharges from the following are not covered by this permit:
  - i. ancillary facilities (e.g., fleet centers and substations) that are not contiguous to a steam electric power generating facility;
  - ii. gas turbine facilities (providing the facility is not a dual-fuel facility that includes a steam boiler), and combined-cycle facilities where no supplemental fuel oil is burned (and the facility is not a dual-fuel facility that includes a steam boiler); and
  - iii. cogeneration (combined heat and power) facilities utilizing a gas turbine.

### **4. Additional Practice-Based Effluent Limits. The following good housekeeping measures are required in addition to Part I.D.1.b:**

- a. Fugitive Dust Emissions. Minimize fugitive dust emissions from coal handling areas. To minimize the tracking of coal dust offsite, consider procedures such as installing specially designed tires or washing vehicles in a designated area before they leave the site and controlling the wash water.
- b. Delivery Vehicles. Minimize contamination of stormwater runoff from delivery vehicles arriving at the plant site. Consider procedures to inspect delivery vehicles arriving at the plant site and ensure overall integrity of the body or container and procedures to deal with leakage or spillage from vehicles or containers.
- c. Fuel Oil Unloading Areas. Minimize contamination of precipitation or surface runoff from fuel oil unloading areas. Consider using containment curbs in unloading areas, having personnel familiar with spill prevention and response procedures present during deliveries to ensure that any leaks or spills are immediately contained and cleaned up, and using spill and overflow protection devices (e.g., drip pans, drip diapers, or other containment

devices placed beneath fuel oil connectors to contain potential spillage during deliveries or from leaks at the connectors).

- d. **Chemical Loading and Unloading.** Minimize contamination of precipitation or surface runoff from chemical loading and unloading areas. Consider using containment curbs at chemical loading and unloading areas to contain spills, having personnel familiar with spill prevention and response procedures present during deliveries to ensure that any leaks or spills are immediately contained and cleaned up, and loading and unloading in covered areas and storing chemicals indoors.
- e. **Miscellaneous Loading and Unloading Areas.** Minimize contamination of precipitation or surface runoff from loading and unloading areas. Consider covering the loading area; grading, berming, or curbing around the loading area to divert run-on; locating the loading and unloading equipment and vehicles so that leaks are contained in existing containment and flow diversion systems; or equivalent procedures.
- f. **Liquid Storage Tanks.** Minimize contamination of surface runoff from above-ground liquid storage tanks. Consider protective guards around tanks, containment curbs, spill and overflow protection, dry cleanup methods, or equivalent measures.
- g. **Large Bulk Fuel Storage Tanks.** Minimize contamination of surface runoff from large bulk fuel storage tanks. Consider containment berms (or their equivalent). The permittee must also comply with applicable State and Federal laws, including Spill Prevention, Control and Countermeasure (SPCC) Plan requirements.
- h. **Spill Reduction Measures.** Minimize the potential for an oil or chemical spill, or reference the appropriate part of the permittee's SPCC plan. Visually inspect as part of the permittee's routine facility inspection the structural integrity of all above-ground tanks, pipelines, pumps, and related equipment that may be exposed to stormwater, and make any necessary repairs immediately.
- i. **Oil-Bearing Equipment in Switchyards.** Minimize contamination of surface runoff from oil-bearing equipment in switchyard areas. Consider using level grades and gravel surfaces to retard flows and limit the spread of spills, or collecting runoff in perimeter ditches.
- j. **Residue-Hauling Vehicles.** Inspect all residue-hauling vehicles for proper covering over the load, adequate gate sealing, and overall integrity of the container body. Repair vehicles without load covering or adequate gate sealing, or with leaking containers or beds.
- k. **Ash Loading Areas.** Reduce or control the tracking of ash and residue from ash loading areas. Clear the ash building floor and immediately adjacent roadways of spillage, debris, and excess water before departure of each loaded vehicle.
- l. **Areas Adjacent to Disposal Ponds or Landfills.** Minimize contamination of surface runoff from areas adjacent to disposal ponds or landfills. Reduce ash residue that may be tracked on to access roads traveled by residue handling vehicles, and reduce ash residue on exit roads leading into and out of residue handling areas.
- m. **Landfills, Scrap yards, Surface Impoundments, Open Dumps, General Refuse Sites.** Minimize the potential for contamination of runoff from these areas.

##### **5. Additional SWMP Requirements. (see also Part I.F)**

- a. **Drainage Area Site Map.** Document in the facility's SWMP the locations of any of the following activities or sources that may be exposed to precipitation or surface runoff: storage tanks, scrap yards, and general refuse areas; short- and long-term storage of general materials (including but not limited to supplies, construction materials, paint equipment, oils, fuels, used and unused solvents, cleaning materials, paint, water treatment chemicals, fertilizer, and pesticides); landfills and construction sites; and stock pile areas (e.g., coal or limestone piles).

- b. Documentation of Good Housekeeping Measures. The permittee must document in the facility’s SWMP the good housekeeping measures implemented to meet the effluent limits in Part III.O.4.

**6. Additional Inspection Requirements (see also Part I.G).**

- a. Site Inspections. As part of facility’s inspection, inspect the following areas quarterly: coal handling areas, loading or unloading areas, switchyards, fueling areas, bulk storage areas, ash handling areas, areas adjacent to disposal ponds and landfills, maintenance areas, liquid storage tanks, and long term and short term material storage areas.

**7. Sector-Specific Benchmarks**

Table O-1 identifies benchmarks that apply to the specific subsectors of Sector O. These benchmarks apply to both the facility’s primary industrial activity and any co-located industrial activities, which describe the facility’s site activities.

<b>Table O-1.</b>		
<b>Subsector (The permittee may be subject to requirements for more than one sector/subsector)</b>	<b>Parameter</b>	<b>Benchmark Monitoring Concentration</b>
<b>Subsector O1.</b> Steam Electric Generating Facilities (Industrial Activity Code “SE”)	Total Iron	1.0 mg/L

**8. Effluent Limitations Based on Effluent Limitations Guidelines (see also Part I.A.1.a)**

Table O-2 identifies effluent limits that apply to the industrial activities described below. Compliance with these effluent limits is to be determined based on discharges from these industrial activities independent of commingling with any other waste streams that may be covered under this permit.

<b>Table O-2<sup>1</sup></b>		
<b>Industrial Activity</b>	<b>Parameter</b>	<b>Effluent Limit</b>
Discharges from coal storage piles at Steam Electric Generating Facilities	TSS	50 mg/l <sup>2</sup>
	pH	6.0 min - 9.0 max

<sup>1</sup> Monitor annually.

<sup>2</sup> If the facility is designed, constructed, and operated to treat the volume of coal pile runoff that is associated with a 10-year, 24-hour rainfall event, any untreated overflow of coal pile runoff from the treatment unit is not subject to the 50 mg/L limitation for total suspended solids.

## **P. Sector P – Land Transportation and Warehousing**

The permittee must comply with Part III sector-specific requirements associated with the facility's primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee's facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

### **1. Covered Stormwater Discharges.**

The requirements in Sector P apply to stormwater discharges associated with industrial activity from Land Transportation and Warehousing facilities as identified by the SIC Codes specified under Sector P in Table A-1 of Appendix A of the permit.

### **2. Limitation on Coverage**

- a. Prohibited Discharges (see also Part I.A.2) This permit does not authorize the discharge of vehicle/equipment/surface wash water, including tank-cleaning operations. Such discharges must be authorized under a separate CDPS permit, discharged to a sanitary sewer in accordance with applicable industrial pretreatment requirements, or recycled on-site.

### **3. Additional Practice-Based Effluent Limits. (see also Part I.D.1)**

- a. Good Housekeeping Measures. In addition to the Good Housekeeping requirements in Part I.D.1.b, the permittee must do the following. Recommended control measures are discussed as indicated:
  - i. Vehicle and Equipment Storage Areas. Minimize the potential for stormwater exposure to leaky or leak-prone vehicles/equipment awaiting maintenance. Consider the following (or other equivalent measures): use of drip pans under vehicles/equipment, indoor storage of vehicles and equipment, installation of berms or dikes, use of absorbents, roofing or covering storage areas, and cleaning pavement surfaces to remove oil and grease.
  - ii. Fueling Areas. Minimize contamination of stormwater runoff from fueling areas. Consider the following (or other equivalent measures): Covering the fueling area; using spill/overflow protection and cleanup equipment; minimizing stormwater run-on/runoff to the fueling area; using dry cleanup methods; and treating and/or recycling collected stormwater runoff.
  - iii. Material Storage Areas. Maintain all material storage vessels (e.g., for used oil/oil filters, spent solvents, paint wastes, hydraulic fluids) to prevent contamination of stormwater and plainly label them (e.g., "Used Oil," "Spent Solvents," etc.). Consider the following (or other equivalent measures): storing the materials indoors; installing berms/dikes around the areas; minimizing runoff of stormwater to the areas; using dry cleanup methods; and treating and/or recycling collected stormwater runoff.
  - iv. Vehicle and Equipment Cleaning Areas. Minimize contamination of stormwater runoff from all areas used for vehicle/equipment cleaning. Consider the following (or other equivalent measures): performing all cleaning operations indoors; covering the cleaning operation, ensuring that all wash water drains to a proper collection system (i.e., not the stormwater drainage system); treating and/or recycling collected wash water, or other equivalent measures.
  - v. Vehicle and Equipment Maintenance Areas. Minimize contamination of stormwater runoff from all areas used for vehicle/equipment maintenance. Consider the following (or other equivalent measures): performing maintenance activities indoors; using drip pans; keeping an organized inventory of materials used in the shop; draining all parts of fluid prior to disposal; prohibiting wet clean up practices if these practices would result in the discharge of pollutants to stormwater drainage systems; using dry cleanup methods; treating and/or recycling collected stormwater runoff, minimizing run on/runoff of stormwater to maintenance areas.

- vi. Locomotive Sanding (Loading Sand for Traction) Areas. Consider the following (or other equivalent measures): covering sanding areas; minimizing stormwater run on/runoff; or appropriate sediment removal practices to minimize the offsite transport of sanding material by stormwater.
- b. Employee Training. Train personnel at least once a year and address the following activities, as applicable: used oil and spent solvent management; fueling procedures; general good housekeeping practices; proper painting procedures; and used battery management.

**4. Additional SWMP Requirements. (see also Part I.F)**

- a. Drainage Area Site Map. Identify in the SWMP the following areas of the facility and indicate whether activities occurring there may be exposed to precipitation/surface runoff: Fueling stations; vehicle/equipment maintenance or cleaning areas; storage areas for vehicle/equipment with actual or potential fluid leaks; loading/unloading areas; areas where treatment, storage or disposal of wastes occur; liquid storage tanks; processing areas; and storage areas.
- b. Potential Pollutant Sources. Assess the potential for the following activities and facility areas to contribute pollutants to stormwater discharges: Onsite waste storage or disposal; dirt/gravel parking areas for vehicles awaiting maintenance; illicit plumbing connections between shop floor drains and the stormwater conveyance system(s); and fueling areas. Describe these activities in the SWMP.
- c. Description of Good Housekeeping Measures. The permittee must document in the facility's SWMP the good housekeeping measures the permittee implements consistent with Part III.P.3.
- d. Vehicle and Equipment Wash water Requirements. If applicable, attach to or reference in the facility's SWMP, a copy of the CDPS permit issued for vehicle/equipment wash water or, if a CDPS permit has not been issued, a copy of the pending application. If an industrial user permit is issued under a local pretreatment program, attach a copy to the facility's SWMP. In any case, implement all non-stormwater discharge permit conditions or pretreatment conditions in the facility's SWMP. If wash water is handled in another manner (e.g., hauled offsite), describe the disposal method and attach all pertinent documentation/information (e.g., frequency, volume, destination, etc.) in the plan.

**5. Additional Inspection Requirements (see also Part I.G).**

Inspect all the following areas/activities: storage areas for vehicles/equipment awaiting maintenance, fueling areas, indoor and outdoor vehicle/equipment maintenance areas, material storage areas, vehicle/equipment cleaning areas and loading/unloading areas.

## **Q. Sector Q – Water Transportation**

The permittee must comply with Part III sector-specific requirements associated with the facility's primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee's facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

### **1. Covered Stormwater Discharges.**

The requirements in Sector Q apply to stormwater discharges associated with industrial activity from Water Transportation facilities as identified by the SIC Codes specified under Sector Q in Table A-1 of Appendix A of the permit.

### **2. Limitations on Coverage.**

- a. Prohibition of Non-Stormwater Discharges. (See also Part I.A.2) Not covered by this permit: bilge and ballast water, sanitary wastes, pressure wash water, and cooling water originating from vessels.

### **3. Additional Practice-Based Effluent Limits. (see also Part I.D.1)**

- a. Good Housekeeping Measures. The permittee must implement the following good housekeeping measures in addition to the requirements of Part I.D.1.b:
  - i. Pressure Washing Area. If pressure washing is used to remove marine growth from vessels, the discharge water must be permitted by a separate CDPS permit. Collect or contain the discharges from the pressures washing area so that they are not co-mingled with stormwater discharges authorized by this permit.
  - ii. Blasting and Painting Area. Minimize the potential for spent abrasives, paint chips, and overspray to discharge into receiving waters or the storm sewer systems. Consider containing all blasting and painting activities or use other measures to minimize the discharge of contaminants (e.g., hanging plastic barriers or tarpaulins during blasting or painting operations to contain debris). When necessary, regularly clean stormwater conveyances of deposits of abrasive blasting debris and paint chips.
  - iii. Material Storage Areas. Store and plainly label all containerized materials (e.g., fuels, paints, solvents, waste oil, antifreeze, batteries) in a protected, secure location away from drains. Minimize the contamination of precipitation or surface runoff from the storage areas. Specify which materials are stored indoors, and consider containment or enclosure for those stored outdoors. If abrasive blasting is performed, discuss the storage and disposal of spent abrasive materials generated at the facility. Consider implementing an inventory control plan to limit the presence of potentially hazardous materials onsite.
  - iv. Engine Maintenance and Repair Areas. Minimize the contamination of precipitation or surface runoff from all areas used for engine maintenance and repair. Consider the following (or their equivalents): performing all maintenance activities indoors, maintaining an organized inventory of materials used in the shop, draining all parts of fluid prior to disposal, prohibiting the practice of hosing down the shop floor, using dry cleanup methods, and treating and/or recycling stormwater runoff collected from the maintenance area.
  - v. Material Handling Area. Minimize the contamination of precipitation or surface runoff from material handling operations and areas (e.g., fueling, paint and solvent mixing, disposal of process wastewater streams from vessels). Consider the following (or their equivalents): covering fueling areas, using spill and overflow protection, mixing paints and solvents in a designated area (preferably indoors or under a shed), and minimizing runoff of stormwater to material handling areas.
  - vi. Drydock Activities. Routinely maintain and clean the dry dock to minimize pollutants in stormwater runoff. Address the cleaning of accessible areas of the dry dock prior to flooding, and final cleanup

following removal of the vessel and raising the dock. Include procedures for cleaning up oil, grease, and fuel spills occurring on the dry dock. Consider the following (or their equivalents): sweeping rather than hosing off debris and spent blasting material from accessible areas of the dry dock prior to flooding and making absorbent materials and oil containment booms readily available to clean up or contain any spills.

- b. **Employee Training.** As part of the permittee's employee training program, address, at a minimum, the following activities (as applicable): used oil management, spent solvent management, disposal of spent abrasives, disposal of vessel wastewaters, spill prevention and control, fueling procedures, general good housekeeping practices, painting and blasting procedures, and used battery management.
- c. **Preventive Maintenance.** As part of the permittee's preventive maintenance program, perform timely inspection and maintenance of stormwater management devices (e.g., cleaning oil and water separators and sediment traps to ensure that spent abrasives, paint chips, and solids will be intercepted and retained prior to entering the storm drainage system), as well as inspecting and testing facility equipment and systems to uncover conditions that could cause breakdowns or failures resulting in discharges of pollutants to surface waters.

#### 4. Additional SWMP Requirements. (see also Part I.F)

- a. **Drainage Area Site Map.** Document in the facility's SWMP where any of the following may be exposed to precipitation or surface runoff: fueling; engine maintenance and repair; vessel maintenance and repair; pressure washing; painting; sanding; blasting; welding; metal fabrication; loading and unloading areas; locations used for the treatment, storage, or disposal of wastes; liquid storage tanks; liquid storage areas (e.g., paint, solvents, resins); and material storage areas (e.g., blasting media, aluminum, steel, scrap iron).
- b. **Summary of Potential Pollutant Sources.** Document in the SWMP the following additional sources and activities that have potential pollutants associated with them: outdoor manufacturing or processing activities (e.g., welding, metal fabricating) and significant dust or particulate generating processes (e.g., abrasive blasting, sanding, and painting.)

#### 5. Additional Inspection Requirements (see also Part I.G).

Include the following in all quarterly routine facility inspections: pressure washing area; blasting, sanding, and painting areas; material storage areas; engine maintenance and repair areas; material handling areas; drydock area; and general yard area.

#### 6. Sector-Specific Benchmarks.

Table Q-1.

Subsector (The permittee may be subject to requirements for more than one sector/subsector)	Parameter	Benchmark Monitoring Concentration
Subsector Q1. Water Transportation Facilities (SIC 4412-4499)	Total Aluminum	0.75 mg/L
	Total Iron	1.0 mg/L
	Total Lead <sup>1</sup>	Hardness Dependent
	Total Zinc <sup>1</sup>	Hardness Dependent

<sup>1</sup> The benchmark values of some metals are dependent on water hardness. The ranges occur in 25 mg/L increments. Hardness Dependent Benchmarks follow in the table below:

Water Hardness Range	Lead (mg/L)	Zinc (mg/L)
0-25 mg/L	0.014	0.04
25-50 mg/L	0.023	0.05

50-75 mg/L	0.045	0.08
75-100 mg/L	0.069	0.11
100-125 mg/L	0.095	0.13
125-150 mg/L	0.122	0.16
150-175 mg/L	0.151	0.18
175-200 mg/L	0.182	0.20
200-225 mg/L	0.213	0.23
225-250 mg/L	0.246	0.25
250+ mg/L	0.262	0.26

## **R. Sector R – Ship and Boat Building and Repair Yards**

The permittee must comply with Part III sector-specific requirements associated with the facility primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee's facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

### **1. Covered Stormwater Discharges.**

The requirements in Sector R apply to stormwater discharges associated with industrial activity from Ship and Boat Building and Repair Yards as identified by the SIC Codes specified under Sector R in Table A-1 of Appendix A of the permit.

### **2. Limitations on Coverage.**

- a. Prohibition of Non-Stormwater Discharges. (See also Part I.A.2) Discharges containing bilge and ballast water, sanitary wastes, pressure wash water, and cooling water originating from vessels are not covered by this permit.

### **3. Additional Practice-Based Effluent Limits. (see also Part I.D.1)**

- a. Good Housekeeping Measures
  - i. Pressure Washing Area. If pressure washing is used to remove marine growth from vessels, the discharged water must be permitted as a process wastewater by a separate CDPS permit.
  - ii. Blasting and Painting Area. Minimize the potential for spent abrasives, paint chips, and overspray to discharging into the receiving water or the storm sewer systems. Consider containing all blasting and painting activities, or use other measures to prevent the discharge of the contaminants (e.g., hanging plastic barriers or tarpaulins during blasting or painting operations to contain debris). When necessary, regularly clean stormwater conveyances of deposits of abrasive blasting debris and paint chips.
  - iii. Material Storage Areas. Store and plainly label all containerized materials (e.g., fuels, paints, solvents, waste oil, antifreeze, batteries) in a protected, secure location away from drains. Minimize the contamination of precipitation or surface runoff from the storage areas. If abrasive blasting is performed, discuss the storage and disposal of spent abrasive materials generated at the facility. Consider implementing an inventory control plan to limit the presence of potentially hazardous materials onsite.
  - iv. Engine Maintenance and Repair Areas. Minimize the contamination of precipitation or surface runoff from all areas used for engine maintenance and repair. Consider the following (or their equivalents): performing all maintenance activities indoors, maintaining an organized inventory of materials used in the shop, draining all parts of fluid prior to disposal, prohibiting the practice of hosing down the shop floor, using dry cleanup methods, and treating and/or recycling stormwater runoff collected from the maintenance area.
  - v. Material Handling Area. Minimize the contamination of precipitation or surface runoff from material handling operations and areas (e.g., fueling, paint and solvent mixing, disposal of process wastewater streams from vessels). Consider the following (or their equivalents): covering fueling areas, using spill and overflow protection, mixing paints and solvents in a designated area (preferably indoors or under a shed), and minimizing stormwater run-on to material handling areas.
  - vi. Drydock Activities. Routinely maintain and clean the dry dock to minimize pollutants in stormwater runoff. Clean accessible areas of the dry dock prior to flooding and final cleanup following removal of the vessel and raising the dock. Include procedures for cleaning up oil, grease, or fuel spills occurring on the dry dock. Consider the following (or their equivalents): sweeping rather than hosing off debris and spent

blasting material from accessible areas of the dry dock prior to flooding, and having absorbent materials and oil containment booms readily available to clean up and contain any spills.

- b. **Employee Training.** As part of the permittee's employee training program, address, at a minimum, the following activities (as applicable): used oil management, spent solvent management, disposal of spent abrasives, disposal of vessel wastewaters, spill prevention and control, fueling procedures, general good housekeeping practices, painting and blasting procedures, and used battery management.
- c. **Preventive Maintenance.** As part of the permittee's preventive maintenance program, perform timely inspection and maintenance of stormwater management devices (e.g., cleaning oil and water separators and sediment traps to ensure that spent abrasives, paint chips, and solids will be intercepted and retained prior to entering the storm drainage system), as well as inspecting and testing facility equipment and systems to uncover conditions that could cause breakdowns or failures resulting in discharges of pollutants to surface waters.

#### **4. Additional SWMP Requirements. (see also Part I.F)**

- a. **Drainage Area Site Map.** Document in the facility's SWMP where any of the following may be exposed to precipitation or surface runoff: fueling; engine maintenance or repair; vessel maintenance or repair; pressure washing; painting; sanding; blasting; welding; metal fabrication; loading and unloading areas; treatment, storage, and waste disposal areas; liquid storage tanks; liquid storage areas (e.g., paint, solvents, resins); and material storage areas (e.g., blasting media, aluminum, steel, scrap iron).
- b. **Potential Pollutant Sources.** Document in the facility's SWMP the following additional sources and activities that have potential pollutants associated with them (if applicable): outdoor manufacturing or processing activities (e.g., welding, metal fabricating) and significant dust or particulate generating processes (e.g., abrasive blasting, sanding, and painting).
- c. **Documentation of Good Housekeeping Measures.** Document in the facility's SWMP any good housekeeping measures implemented to meet the effluent limits in Part III.R.3.
  - i. **Blasting and Painting Areas.** Document in the SWMP any standard operating practices relating to blasting and painting (e.g., prohibiting uncontained blasting and painting over open water or prohibiting blasting and painting during windy conditions, which can render containment ineffective).
  - ii. **Storage Areas.** Specify in the facility's SWMP which materials are stored indoors, and consider containment or enclosure for those stored outdoors.

#### **5. Additional Inspection Requirements (see also Part I.G).**

Include the following in all quarterly routine facility inspections: pressure washing area; blasting, sanding, and painting areas; material storage areas; engine maintenance and repair areas; material handling areas; dry dock area; and general yard area.

## **S. Sector S – Air Transportation**

The permittee must comply with Part III sector-specific requirements associated with the facility’s primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee’s facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

### **1. Covered Stormwater Discharges.**

The requirements in Sector S apply to stormwater discharges associated with industrial activity from Air Transportation facilities identified by the SIC Codes specified under Sector S in Table A-1 of Appendix A of the permit.

### **2. Limitation on Coverage**

- a. **Limitations on Coverage.** This permit authorizes stormwater discharges from only those portions of the air transportation facility that are involved in vehicle maintenance (including vehicle rehabilitation, mechanical repairs, painting, fueling and lubrication), equipment cleaning operations or deicing operations.

**Note:** “deicing” will generally be used to imply both deicing (removing frost, snow or ice) and anti-icing (preventing accumulation of frost, snow or ice) activities, unless specific mention is made regarding anti-icing and/or deicing activities.

- b. **Prohibition of Non-Stormwater Discharges.** (See also Part I.A.2 and Part III.S.3) This permit does not authorize the discharge of aircraft; ground vehicle, runway and equipment wash waters nor the dry weather discharge of deicing chemicals. Such discharges must be covered by separate CDPS permit(s). Note that a discharge resulting from snowmelt is not a dry weather discharge.

### **3. Additional Practice-Based Effluent Limits. (see also Part I.D.1)**

- a. **Good Housekeeping Measures.**
  - i. **Aircraft, Ground Vehicle and Equipment Maintenance Areas.** Minimize the contamination of stormwater runoff from all areas used for aircraft, ground vehicle and equipment maintenance (including the maintenance conducted on the terminal apron and in dedicated hangars). Consider the following practices (or their equivalents): performing maintenance activities indoors; maintaining an organized inventory of material used in the maintenance areas; draining all parts of fluids prior to disposal; prohibiting the practice of hosing down the apron or hanger floor; using dry cleanup methods; and collecting the stormwater runoff from the maintenance area and providing treatment or recycling.
  - ii. **Aircraft, Ground Vehicle and Equipment Cleaning Areas.** Clearly demarcate these areas on the ground using signage or other appropriate means. Minimize the contamination of stormwater runoff from cleaning areas.
  - iii. **Aircraft, Ground Vehicle and Equipment Storage Areas.** Store all aircraft, ground vehicles and equipment awaiting maintenance in designated areas only and minimize the contamination of stormwater runoff from these storage areas. Consider the following control measures, including any BMPs (or their equivalents): storing aircraft and ground vehicles indoors; using drip pans for the collection of fluid leaks; and perimeter drains, dikes or berms surrounding the storage areas.
  - iv. **Material Storage Areas.** Maintain the vessels of stored materials (e.g., used oils, hydraulic fluids, spent solvents, and waste aircraft fuel) in good condition, to prevent or minimize contamination of stormwater. Also plainly label the vessels (e.g., “used oil,” “Contaminated Jet A,” etc.). Minimize contamination of precipitation/runoff from these areas. Consider the following control measures (or their equivalents): storing materials indoors; storing waste materials in a centralized location; and installing berms/dikes around storage areas.

- 
- v. Airport Fuel System and Fueling Areas. Minimize the discharge of fuel to the storm sewer/surface waters resulting from fuel servicing activities or other operations conducted in support of the airport fuel system. Consider the following control measures (or their equivalents): implementing spill and overflow practices (e.g., placing absorptive materials beneath aircraft during fueling operations); using only dry cleanup methods; and collecting stormwater runoff.
- vi. Source Reduction. Minimize, and where feasible eliminate, the use of urea and glycol-based deicing chemicals, in order to reduce the aggregate amount of deicing chemicals used and/or lessen the environmental impact. Chemical options to replace ethylene glycol, propylene glycol and urea include: potassium acetate; magnesium acetate; calcium acetate; and anhydrous sodium acetate.
- a) Runway Deicing Operation: Minimize contamination of stormwater runoff from runways as a result of deicing operations. Evaluate whether over-application of deicing chemicals occurs by analyzing application rates, and adjust as necessary, consistent with considerations of flight safety. Also, consider these control measure options (or their equivalents): metered application of chemicals; pre-wetting dry chemical constituents prior to application; installing a runway ice detection system; implementing anti-icing operations as a preventive measure against ice buildup.
- b) Aircraft Deicing Operations. Minimize contamination of stormwater runoff from aircraft deicing operations. Determine whether excessive application of deicing chemicals occurs and adjust as necessary, consistent with considerations of flight safety. This evaluation should be carried out by the personnel most familiar with the particular aircraft and flight operations in question (versus an outside entity such as the airport authority). Consider using alternative deicing/anti-icing agents as well as containment measures for all applied chemicals. Also consider these control measure options (or their equivalents) for reducing deicing fluid use: forced-air deicing systems, computer-controlled fixed-gantry systems, infrared technology, hot water, varying glycol content to air temperature, enclosed-basket deicing trucks, mechanical methods, solar radiation, hangar storage, aircraft covers, and thermal blankets for MD-80s and DC-9s. Also consider using ice-detection systems and airport traffic flow strategies and departure slot allocation systems.
- vii. Management of Runoff. Where deicing operations occur, implement a program to control or manage contaminated runoff to minimize the amount of pollutants being discharged from the site. Consider these control measure options (or their equivalents): a dedicated deicing facility with a runoff collection/recovery system; using vacuum/collection trucks; storing contaminated stormwater/deicing fluids in tanks and releasing controlled amounts to a publicly owned treatment works; collecting contaminated runoff in a wet pond for biochemical decomposition (be aware of attracting wildlife that may prove hazardous to flight operations); and directing runoff into vegetative swales or other infiltration measures. Also consider recovering deicing materials when these materials are applied during non-precipitation events (e.g., covering storm sewer inlets, using booms, installing absorptive interceptors in the drains, etc.) to prevent these materials from later becoming a source of stormwater contamination. Used deicing fluid should be recycled whenever possible.
- b. Deicing Season. The permittee must determine the seasonal timeframe (e.g., December- February, October - March, etc.) during which deicing activities typically occur at the facility. Implementation of control measures, including any BMPs, facility inspections and monitoring must be conducted with particular emphasis throughout the defined deicing season. If the permittee meets the deicing chemical usage thresholds of 100,000 gallons glycol and/or 100 tons of urea, the deicing season the permittee identified is the timeframe during which the permittee must obtain the four required benchmark monitoring event results for deicing-related parameters, i.e., BOD, COD, ammonia and pH. See also Part III.S.6.

**4. Additional SWMP Requirements. (see also Part I.F)**

An airport authority and tenants of the airport are encouraged to work in partnership in the development of a SWMP. If an airport tenant obtains authorization under this permit and develops a SWMP for discharges from his own areas of the airport, prior to authorization, that SWMP must be coordinated and integrated with the SWMP for the entire airport. Tenants of the airport facility include air passenger or cargo companies, fixed based operators and other parties who have contracts with the airport authority to conduct business operations on airport property and whose operations result in stormwater discharges associated with industrial activity.

- a. Drainage Area Site Map. Document in the SWMP the following areas of the facility and indicate whether activities occurring there may be exposed to precipitation/surface runoff: aircraft and runway deicing operations; fueling stations; aircraft, ground vehicle and equipment maintenance/cleaning areas; storage areas for aircraft, ground vehicles and equipment awaiting maintenance.
- b. Potential Pollutant Sources. In the permittee's inventory of exposed materials, describe in the facility's SWMP the potential for the following activities and facility areas to contribute pollutants to stormwater discharges: aircraft, runway, ground vehicle and equipment maintenance and cleaning; aircraft and runway deicing operations (including apron and centralized aircraft deicing stations, runways, taxiways and ramps). If the permittee uses deicing chemicals, the permittee must maintain a record of the types (including the Material Safety Data Sheets [MSDS]) used and the monthly quantities, either as measured or, in the absence of metering, as estimated to the best of the permittee's knowledge. This includes all deicing chemicals, not just glycols and urea (e.g., potassium acetate), because large quantities of these other chemicals can still have an adverse impact on receiving waters. Tenants or other fixed-based operations that conduct deicing operations must provide the above information to the airport authority for inclusion with any comprehensive airport SWMPs.
- c. Vehicle and Equipment Wash water Requirements. Attach to or reference in the facility's SWMP, a copy of the CDPS permit issued for vehicle/equipment wash water or, if a CDPS permit has not been issued, a copy of the pending application. If an industrial user permit is issued under a local pretreatment program, include a copy in the facility's SWMP. In any case, if the permittee is subject to another permit, describe the facility's control measures for implementing all non-stormwater discharge permit conditions or pretreatment requirements in the facility's SWMP. If wash water is handled in another manner (e.g., hauled offsite, retained onsite), describe the disposal method and attach all pertinent documentation/information (e.g., frequency, volume, destination, etc.) in the facility's SWMP.
- d. Documentation of Control Measures Used for Management of Runoff: Document in the facility's SWMP the control measures used for collecting or containing contaminated melt water from collection areas used for disposal of contaminated snow.

**5. Additional Inspection Requirements (see also Part I.G).**

- a. Inspection Frequency. At a minimum, conduct visual inspections at least monthly during the deicing season (e.g., October through April for most mid-latitude airports). If the permittee's facility needs to deice before or after this period, expand the monthly inspections to include all months during which deicing chemicals may be used. The Division may specifically require the permittee to increase inspection frequencies.
- b. Inspection Scope. Using only qualified personnel, conduct the visual inspections during periods of actual deicing operations, if possible. If not practicable during active deicing because of weather, conduct the inspection during the season when deicing operations occur and the materials and equipment for deicing are in place.

**6. Sector-Specific Benchmarks.**

Monitor per the requirements in Table S-1.

**Table S-1.**

<b>Subsector (The permittee may be subject to requirements for more than one sector/subsector)</b>	<b>Parameter</b>	<b>Benchmark Monitoring Concentration</b>
For airports where a single permittee, or a combination of permitted facilities use more than 100,000 gallons of glycol-based deicing chemicals and/or 100 tons or more of urea on an average annual basis, monitor the first four parameters in ONLY those outfalls that collect runoff from areas where deicing activities occur (SIC 4512-4581).	Biochemical Oxygen Demand (BOD <sub>5</sub> ) <sup>1</sup>	30 mg/L
	Chemical Oxygen Demand (COD) <sup>1</sup>	120 mg/L
	Ammonia <sup>1</sup>	2.14 mg/L
	pH <sup>1</sup>	6.0 - 9.0 s.u.

<sup>1</sup> These are deicing-related parameters. Collect the four benchmark samples, and any required follow-up benchmark samples, during the timeframe defined in Part S.3.2 when deicing activities are occurring.

## **T. Sector T – Treatment Works**

The permittee must comply with Part III sector-specific requirements associated with the facility's primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee's facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

### **1. Covered Stormwater Discharges.**

The requirements in Sector T apply to stormwater discharges associated with industrial activity from Treatment Works as identified by the Activity Code specified under Sector T in Table A-1 of Appendix A of the permit.

### **2. Industrial Activities Covered by Sector T.**

The requirements listed under this part apply to all existing point source stormwater discharges associated with the following activities:

- a. Treatment works treating domestic sewage, or any other sewage sludge or wastewater treatment device or system used in the storage, treatment, recycling, and reclamation of municipal or domestic sewage, including land dedicated to the disposal of sewage sludge; that are located within the confines of a facility with a design flow of 1.0 million gallons per day (MGD) or more; or are required to have an approved pretreatment program under 40 CFR Part 403.
- b. The following are not required to have permit coverage: farmlands, domestic gardens or lands used for sludge management where sludge is beneficially reused and which are not physically located within the facility, or areas that are in compliance with Section 405 of the CWA.

### **3. Limitations on Coverage.**

- a. Prohibition of Non-Stormwater Discharges. (See also Part I.A.2) Sanitary and industrial wastewater, equipment, and vehicle wash water are not authorized by this permit.

### **4. Additional Practice-Based Effluent Limits. (see also Part I.D.1)**

- a. Control Measures. In addition to the other control measures, consider the following: routing stormwater to the treatment works; or covering exposed materials (i.e., from the following areas: grit, screenings, and other solids handling, storage, or disposal areas; sludge drying beds; dried sludge piles; compost piles; and septage or hauled waste receiving station).
- b. Employee Training. At a minimum, training must address the following areas when applicable to a facility: petroleum product management; process chemical management; spill prevention and controls; fueling procedures; general good housekeeping practices; and proper procedures for using fertilizer, herbicides, and pesticides.

### **5. Additional SWMP Requirements. (see also Part I.F)**

- a. Site Map. Document in the facility's SWMP where any of the following may be exposed to precipitation or surface runoff: grit, screenings, and other solids handling, storage, or disposal areas; sludge drying beds; dried sludge piles; compost piles; septage or hauled waste receiving station; and storage areas for process chemicals, petroleum products, solvents, fertilizers, herbicides, and pesticides.
- b. Potential Pollutant Sources. Document in the facility's SWMP the following additional sources and activities that have potential pollutants associated with them, as applicable: grit, screenings, and other solids handling, storage, or disposal areas; sludge drying beds; dried sludge piles; compost piles; septage or hauled waste receiving station; and access roads and rail lines.

- c. Wastewater and Washwater Requirements. Keep a copy of all the permittee' current CDPS permits issued for wastewater and industrial, vehicle and equipment wash water discharges or, if an CDPS permit has not yet been issued, a copy of the pending application(s) with the permittee's SWMP. If the wash water is handled in another manner, the disposal method must be described and all pertinent documentation must be retained onsite.

**6. Additional Inspection Requirements (see also Part I.G).**

Include the following areas in all inspections: access roads and rail lines; grit, screenings, and other solids handling, storage, or disposal areas; sludge drying beds; dried sludge piles; compost piles; and septage or hauled waste receiving station.

**U. Sector U – Food and Kindred Products**

The permittee must comply with Part III sector-specific requirements associated with the facility’s primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee’s facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

**1. Covered Stormwater Discharges.**

The requirements in Sector U apply to stormwater discharges associated with industrial activity from Food and Kindred Products facilities as identified by the SIC Codes specified in Table A-1 of Appendix A of the permit.

**2. Limitations on Coverage.**

- a. Prohibition of Non-Stormwater Discharges. (See also Part I.A.2) The following discharges are not authorized by this permit: discharges containing boiler blowdown, cooling tower overflow and blowdown, ammonia refrigeration purging, and vehicle washing and clean-out operations.

**3. Additional Practice-based Effluent Limitations. (see also Part I.D.1)**

- a. Employee Training. Address pest control in the permittee’s employee training program.

**4. Additional SWMP Requirements. (see also Part I.F)**

- a. Drainage Area Site Map. Document in the facility’s SWMP the locations of the following activities if they are exposed to precipitation or runoff: vents and stacks from cooking, drying, and similar operations; dry product vacuum transfer lines; animal holding pens; spoiled product; and broken product container storage areas.
- b. Potential Pollutant Sources. Document in the facility’s SWMP, in addition to food and kindred products processing-related industrial activities, application and storage of pest control chemicals (e.g., rodenticides, insecticides, fungicides) used on plant grounds.

**5. Additional Inspection Requirements (see also Part I.G).**

Inspect on a quarterly basis, at a minimum, the following areas where the potential for exposure to stormwater exists: loading and unloading areas for all significant materials; storage areas, including associated containment areas; waste management units; vents and stacks emanating from industrial activities; spoiled product and broken product container holding areas; animal holding pens; staging areas; and air pollution control equipment.

**6. Sector-Specific Benchmarks.**

**Table U-1.**

<b>Subsector (The permittee may be subject to requirements for more than one Sector / Subsector)</b>	<b>Parameter</b>	<b>Benchmark Monitoring Concentration</b>
<b>Subsector U1.</b> Grain Mill Products (SIC 2041-2048)	Total Suspended Solids (TSS)	100 mg/L
<b>Subsector U2.</b> Fats and Oils Products (SIC 2074-2079)	Biochemical Oxygen Demand (BOD <sub>5</sub> )	30 mg/L
	Chemical Oxygen Demand (COD)	120 mg/L
	Nitrate plus Nitrite Nitrogen	0.68 mg/L
	Total Suspended Solids (TSS)	100 mg/L

## **V. Sector V – Textile Mills, Apparel, and Other Fabric Products**

The permittee must comply with Part III sector-specific requirements associated with the facility's primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee's facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

### **1. Covered Stormwater Discharges.**

The requirements in Sector V apply to stormwater discharges associated with industrial activity from Textile Mills, Apparel, and Other Fabric Product manufacturing as identified by the SIC Codes specified under Sector V in Table A-1 of Appendix A of the permit.

### **2. Limitations on Coverage.**

- a. Prohibition of Non-Stormwater Discharges. (See also Part I.A.2) The following are not authorized by this permit: discharges of wastewater (e.g., wastewater resulting from wet processing or from any processes relating to the production process), reused or recycled water, and waters used in cooling towers. If the permittee has these types of discharges from the permittee's facility, the permittee must cover them under a separate CDPS permit.

### **3. Additional Practice-Based Limitations. (See also Part I.D.1)**

- a. Good Housekeeping Measures.
  - i. Material Storage Areas. Plainly label and store all containerized materials (e.g., fuels, petroleum products, solvents, and dyes) in a protected area, away from drains. Minimize contamination of the stormwater runoff from such storage areas. Also, consider an inventory control plan to prevent excessive purchasing of potentially hazardous substances. For storing empty chemical drums or containers, ensure that the drums and containers are clean (consider triple-rinsing) and that there is no contact of residuals with precipitation or runoff. Collect and dispose of wash water from these cleanings properly.
  - ii. Material Handling Areas. Minimize contamination of stormwater runoff from material handling operations and areas. Consider the following (or their equivalents): use of spill and overflow protection; covering fueling areas; and covering or enclosing areas where the transfer of material may occur. When applicable, address the replacement or repair of leaking connections, valves, transfer lines, and pipes that may carry chemicals, dyes, or wastewater.
  - iii. Fueling Areas. Minimize contamination of stormwater runoff from fueling areas. Consider the following (or their equivalents): covering the fueling area, using spill and overflow protection, minimizing run-on of stormwater to the fueling areas, using dry cleanup methods, and treating and/or recycling stormwater runoff collected from the fueling area.
  - iv. Above-Ground Storage Tank Area. Minimize contamination of the stormwater runoff from above-ground storage tank areas, including the associated piping and valves. Consider the following (or their equivalents): regular cleanup of these areas; including measures for tanks, piping and valves explicitly in the permittee's SPCC program; minimizing runoff of stormwater from adjacent areas; restricting access to the area; inserting filters in adjacent catch basins; providing absorbent booms in unbermed fueling areas; using dry cleanup methods; and permanently sealing drains within critical areas that may discharge to a storm drain.
- b. Employee Training. As part of the permittee's employee training program, address, at a minimum, the following activities (as applicable): use of reused and recycled waters, solvents management, proper disposal of dyes, proper disposal of petroleum products and spent lubricants, spill prevention and control, fueling procedures, and general good housekeeping practices.

**4. Additional SWMP Requirements. (see also Part I.F)**

- a. Potential Pollutant Sources. Document in the facility's SWMP the following additional sources and activities that have potential pollutants associated with them: industry-specific significant materials and industrial activities (e.g., backwinding, beaming, bleaching, backing bonding, carbonizing, carding, cut and sew operations, desizing, drawing, dyeing locking, fulling, knitting, mercerizing, opening, packing, plying, scouring, slashing, spinning, synthetic-felt processing, textile waste processing, tufting, turning, weaving, web forming, winging, yarn spinning, and yarn texturing).
- b. Description of Good Housekeeping Measures for Material Storage Areas. Document in the SWMP the permittee's containment area or enclosure for materials stored outdoors in connection with Part III.V.3.a.i above.

**5. Additional Inspection Requirements (see also Part I.G).**

Inspect, at least monthly, the following activities and areas (at a minimum): transfer and transmission lines, spill prevention, good housekeeping practices, management of process waste products, and all structural and nonstructural management practices.

**W. Sector W – Furniture and Fixtures**

The permittee must comply with Part III sector-specific requirements associated with the facility's primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of permittee's facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

**1. Covered Stormwater Discharges.**

The requirements in Sector W apply to stormwater discharges associated with industrial activity from Furniture and Fixtures facilities as identified by the SIC Codes specified under Sector W in Table A-1 of Appendix A of the permit.

**2. Additional SWMP Requirements. (see also Part I.F)**

- a. Drainage Area Site Map. Document in the permittee's SWMP where any of the following may be exposed to precipitation or surface runoff: material storage (including tanks or other vessels used for liquid or waste storage) areas; outdoor material processing areas; areas where wastes are treated, stored, or disposed of; access roads; and rail spurs.

## **X. Sector X – Printing and Publishing**

The permittee must comply with Part III sector-specific requirements associated with the facility's primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee's facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

### **1. Covered Stormwater Discharges.**

The requirements in Sector X apply to stormwater discharges associated with industrial activity from Printing and Publishing facilities as identified by the SIC Codes specified under Sector X in Table A-1 of Appendix A of the permit.

### **2. Additional Practice-Based Effluent Limits (see also Part I.D.1).**

#### **a. Good Housekeeping Measures.**

- i. **Material Storage Areas.** Plainly label and store all containerized materials (e.g., skids, pallets, solvents, bulk inks, hazardous waste, empty drums, portable and mobile containers of plant debris, wood crates, steel racks, and fuel oil) in a protected area, away from drains. Minimize contamination of the stormwater runoff from such storage areas. Also, consider an inventory control plan to prevent excessive purchasing of potentially hazardous substances.
- ii. **Material Handling Area.** Minimize contamination of stormwater runoff from material handling operations and areas (e.g., blanket wash, mixing solvents, loading and unloading materials). Consider the following (or their equivalents): using spill and overflow protection, covering fueling areas, and covering or enclosing areas where the transfer of materials may occur. When applicable, address the replacement or repair of leaking connections, valves, transfer lines, and pipes that may carry chemicals or wastewater.
- iii. **Fueling Areas.** Minimize contamination of stormwater runoff from fueling areas. Consider the following (or their equivalents): covering the fueling area, using spill and overflow protection, minimizing runoff of stormwater to the fueling areas, using dry cleanup methods, and treating and/or recycling stormwater runoff collected from the fueling area.
- iv. **Above Ground Storage Tank Area.** Minimize contamination of the stormwater runoff from above-ground storage tank areas, including the associated piping and valves. Consider the following (or their equivalents): regularly cleaning these areas, explicitly addressing tanks, piping and valves in the SPCC program, minimizing stormwater runoff from adjacent areas, restricting access to the area, inserting filters in adjacent catch basins, providing absorbent booms in unbermed fueling areas, using dry cleanup methods, and permanently sealing drains within critical areas that may discharge to a storm drain.

- b. **Employee Training.** As part of the permittee's employee training program, address, at a minimum, the following activities (as applicable): spent solvent management, spill prevention and control, used oil management, fueling procedures, and general good housekeeping practices.

### **3. Additional SWMP Requirements. (see also Part I.F)**

- a. **Description of Good Housekeeping Measures for Material Storage Areas.** In connection with Part III.X.2.a.i, describe in the SWMP the containment area or enclosure for materials stored outdoors.

## **Y. Sector Y – Rubber, Miscellaneous Plastic Products, and Miscellaneous Manufacturing Industries**

The permittee must comply with Part III sector-specific requirements associated with the facility's primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee's facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

### **1. Covered Stormwater Discharges.**

The requirements in Sector Y apply to stormwater discharges associated with industrial activity from Rubber, Miscellaneous Plastic Products, and Miscellaneous Manufacturing Industries facilities as identified by the SIC Codes specified under Sector Y in Table A-1 of Appendix A of the permit.

### **2. Additional Practice-Based Effluent Limits (see also Part I.D.1)**

- a. Controls for Rubber Manufacturers. Minimize the discharge of zinc in the permittee's stormwater discharges. Parts III.Y.2.a.i to Y.2.a.v give possible sources of zinc to be reviewed and list some specific control measures to be considered for implementation (or their equivalents). Following are some general control measure options to consider: using chemicals purchased in pre-weighed, sealed polyethylene bags; storing in-use materials in sealable containers, ensuring an airspace between the container and the cover to minimize "puffing" losses when the container is opened, and using automatic dispensing and weighing equipment.
  - i. Zinc Bags. Ensure proper handling and storage of zinc bags at the permittee's facility. Following are some control measure options: employee training on the handling and storage of zinc bags, indoor storage of zinc bags, and cleanup of zinc spills without washing the zinc into the storm drain, and the use of 2,500-pound sacks of zinc rather than 50- to 100-pound sacks.
  - ii. Dumpsters. Minimize discharges of zinc from dumpsters. Following are some control measure options: covering the dumpster, moving the dumpster indoors, or providing a lining for the dumpster.
  - iii. Dust Collectors and Baghouses. Minimize contributions of zinc to stormwater from dust collectors and baghouses. Replace or repair, as appropriate, improperly operating dust collectors and baghouses.
  - iv. Grinding Operations. Minimize contamination of stormwater as a result of dust generation from rubber grinding operations. One control measure option is to install a dust collection system.
  - v. Zinc Stearate Coating Operations. Minimize the potential for stormwater contamination from drips and spills of zinc stearate slurry that may be released to the storm drain. One control measure option is to use alternative compounds to zinc stearate.
- b. Controls for Plastic Products Manufacturers. Minimize the discharge of plastic resin pellets in the permittee's stormwater discharges. Control measures to be considered for implementation (or their equivalents) include minimizing spills, cleaning up of spills promptly and thoroughly, sweeping thoroughly, pellet capturing, employee education, and disposal precautions.

### **3. Additional SWMP Requirements. (see also Part I.F)**

- a. Potential Pollutant Sources for Rubber Manufacturers. Document in the permittee's SWMP the use of zinc at the permittee's facility and the possible pathways through which zinc may be discharged in stormwater runoff.

### **4. Sector-Specific Benchmarks.**

**Table Y-1.**

<b>Subsector (The permittee may be subject to requirements for more than one sector/subsector)</b>	<b>Parameter</b>	<b>Benchmark Monitoring Concentration</b>
<b>Subsector Y1.</b> Rubber Products Manufacturing (SIC 3011, 3021, 3052, 3053, 3061, 3069)	Total Zinc <sup>1</sup>	Hardness Dependent

<sup>1</sup> The benchmark values of some metals are dependent on water hardness. The ranges occur in 25 mg/L increments. Hardness Dependent Benchmarks follow in the table below:

<b>Water Hardness Range</b>	<b>Zinc (mg/L)</b>
0-25 mg/L	0.04
25-50 mg/L	0.05
50-75 mg/L	0.08
75-100 mg/L	0.11
100-125 mg/L	0.13
125-150 mg/L	0.16
150-175 mg/L	0.18
175-200 mg/L	0.20
200-225 mg/L	0.23
225-250 mg/L	0.25
250+ mg/L	0.26

## **Z. Sector Z – Leather Tanning and Finishing**

The permittee must comply with Part III sector-specific requirements associated with the facility's primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee's facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

### **1. Covered Stormwater Discharges.**

The requirements in Sector Z apply to stormwater discharges associated with industrial activity from Leather Tanning and Finishing facilities as identified by the SIC Code specified under Sector Z in Table A-1 of Appendix A of the permit.

### **2. Additional Practice-Based Effluent Limits.**

- a. Good Housekeeping Measures. (See also Part I.D.1.b)
  - i. Storage Areas for Raw, Semiprocessed, or Finished Tannery By-products. Minimize contamination of stormwater runoff from pallets and bales of raw, semiprocessed, or finished tannery by-products (e.g., splits, trimmings, shavings). Consider indoor storage or protection with polyethylene wrapping, tarpaulins, roofed storage, etc. Consider placing materials on an impermeable surface and enclosing or putting berms (or equivalent measures) around the area to prevent stormwater run-on and runoff.
  - ii. Material Storage Areas. Label storage containers of all materials (e.g., specific chemicals, hazardous materials, spent solvents, waste materials) minimize contact of such materials with stormwater.
  - iii. Buffing and Shaving Areas. Minimize contamination of stormwater runoff with leather dust from buffing and shaving areas. Consider dust collection enclosures, preventive inspection and maintenance programs, or other appropriate preventive measures.
  - iv. Receiving, Unloading, and Storage Areas. Minimize contamination of stormwater runoff from receiving, unloading, and storage areas. If these areas are exposed, consider the following (or their equivalents): covering all hides and chemical supplies, diverting drainage to the process sewer, or grade berming or curbing the area to prevent stormwater runoff.
  - v. Outdoor Storage of Contaminated Equipment. Minimize contact of stormwater with contaminated equipment. Consider the following (or their equivalents): covering equipment, diverting drainage to the process sewer, and cleaning thoroughly prior to storage.
  - vi. Waste Management. Minimize contamination of stormwater runoff from waste storage areas. Consider the following (or their equivalents): covering dumpsters, moving waste management activities indoors, covering waste piles with temporary covering material such as tarpaulins or polyethylene, and minimizing stormwater runoff by enclosing the area or building berms around the area.

### **3. Additional SWMP Requirements. (see also Part I.F)**

- a. Drainage Area Site Map. Identify in the permittee's SWMP where any of the following may be exposed to precipitation or surface runoff: processing and storage areas of the beamhouse, tanyard, and re-tan wet finishing and dry finishing operations.
- b. Potential Pollutant Sources. Document in the facility's SWMP the following sources and activities that have potential pollutants associated with them (as appropriate): temporary or permanent storage of fresh and brine-cured hides; extraneous hide substances and hair; leather dust, scraps, trimmings, and shavings.

**AA. Sector AA – Fabricated Metal Products**

The permittee must comply with Part III sector-specific requirements associated with the facility's primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee's facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

**1. Covered Stormwater Discharges.**

The requirements in Sector AA apply to stormwater discharges associated with industrial activity from Fabricated Metal Products facilities as identified by the SIC Codes specified under Sector AA in Table A-1 of Appendix A of the permit.

**2. Additional Practice-Based Effluent Limits (see also Part I.D.1.)**

- a. Good Housekeeping Measures.
  - i. Raw Steel Handling Storage. Minimize the generation of and/or recover and properly manage scrap metals, fines, and iron dust. Include measures for containing materials within storage handling areas.
  - ii. Paints and Painting Equipment. Minimize exposure of paint and painting equipment to stormwater.
- b. Spill Prevention and Response Procedures. Ensure that the necessary equipment to implement a cleanup is available to personnel. The following areas should be addressed
  - i. Metal Fabricating Areas. Maintain clean, dry, orderly conditions in these areas. Consider using dry clean-up techniques.
  - ii. Storage Areas for Raw Metal. Keep these areas free of conditions that could cause, or impede appropriate and timely response to, spills or leakage of materials. Consider the following (or their equivalents): maintaining storage areas so that there is easy access in the event of a spill, and labeling stored materials to aid in identifying spill contents.
  - iii. Metal Working Fluid Storage Areas. Minimize the potential for stormwater contamination from storage areas for metal working fluids.
  - iv. Cleaners and Rinse Water. Control and clean up spills of solvents and other liquid cleaners, control sand buildup and disbursement from sand-blasting operations, and prevent exposure of recyclable wastes. Substitute environmentally benign cleaners when possible.
  - v. Lubricating Oil and Hydraulic Fluid Operations. Minimize the potential for stormwater contamination from lubricating oil and hydraulic fluid operations. Consider using monitoring equipment or other devices to detect and control leaks and overflows. Consider installing perimeter controls such as dikes, curbs, grass filter strips, or equivalent measures.
  - vi. Chemical Storage Areas. Minimize stormwater contamination and accidental spillage in chemical storage areas. Include a program to inspect containers and identify proper disposal methods.
- c. Spills and Leaks. In the permittee's spill prevention and response procedures, required by Part 2.1.2.4, pay attention to the following materials (at a minimum): chromium, toluene, pickle liquor, sulfuric acid, zinc and other water priority chemicals, and hazardous chemicals and wastes.

**3. Additional SWMP Requirements. (see also Part I.F)**

- a. Drainage Area Site Map. Document in facility’s SWMP where any of the following may be exposed to precipitation or surface runoff: raw metal storage areas; finished metal storage areas; scrap disposal collection sites; equipment storage areas; retention and detention basins; temporary and permanent diversion dikes or berms; right-of-way or perimeter diversion devices; sediment traps and barriers; processing areas, including outside painting areas; wood preparation; recycling; and raw material storage.
- b. Potential Pollutant Sources. Document in the facility’s SWMP the following additional sources and activities that have potential pollutants associated with them: loading and unloading operations for paints, chemicals, and raw materials; outdoor storage activities for raw materials, paints, empty containers, corn cobs, chemicals, and scrap metals; outdoor manufacturing or processing activities such as grinding, cutting, degreasing, buffing, and brazing; onsite waste disposal practices for spent solvents, sludge, pickling baths, shavings, ingot pieces, and refuse and waste piles.

**4. Additional Inspection Requirements (see also Part I.G)**

- a. Inspections. At a minimum, include the following areas in all inspections: raw metal storage areas, finished product storage areas, material and chemical storage areas, recycling areas, loading and unloading areas, equipment storage areas, paint areas, and vehicle fueling and maintenance areas.

As part of the permittee’s inspection, also inspect areas associated with the storage of raw metals, spent solvents and chemicals storage areas, outdoor paint areas, and drainage from roof. Potential pollutants include chromium, zinc, lubricating oil, solvents, aluminum, oil and grease, methyl ethyl ketone, steel, and related materials.

**5. Sector-Specific Benchmarks.**

**Table AA-1**

<b>Subsector (The permittee may be subject to requirements for more than one sector/subsector)</b>	<b>Parameter</b>	<b>Benchmark Monitoring Concentration</b>
<b>Subsector AA1.</b> Fabricated Metal Products, except Coating (SIC 3411-3499; 3911-3915)	Total Aluminum	0.75 mg/L
	Total Iron	1.0 mg/L
	Total Zinc <sup>1</sup>	Hardness Dependent
	Nitrate plus Nitrite Nitrogen	0.68 mg/L
<b>Subsector AA2.</b> Fabricated Metal Coating and Engraving (SIC 3479)	Total Zinc <sup>1</sup>	Hardness Dependent
	Nitrate plus Nitrite Nitrogen	0.68 mg/L

<sup>1</sup> The benchmark values of some metals are dependent on water hardness. The ranges occur in 25 mg/L increments. Hardness Dependent Benchmarks follow in the table below:

<b>Water Hardness Range</b>	<b>Zinc (mg/L)</b>
0-25 mg/L	0.04
25-50 mg/L	0.05
50-75 mg/L	0.08
75-100 mg/L	0.11
100-125 mg/L	0.13
125-150 mg/L	0.16
150-175 mg/L	0.18
175-200 mg/L	0.20
200-225 mg/L	0.23
225-250 mg/L	0.25
250+ mg/L	0.26

**AB. Sector AB – Transportation Equipment, Industrial or Commercial Machinery Facilities**

The permittee must comply with Part III sector-specific requirements associated with the facility's primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee's facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

**1. Covered Stormwater Discharges.**

The requirements in Sector AB apply to stormwater discharges associated with industrial activity from Transportation Equipment, Industrial or Commercial Machinery facilities as identified by the SIC Codes specified under Sector AB in Table A-1 of Appendix A of the permit.

**2. Additional SWMP Requirements. (see also Part I.F)**

- a. Drainage Area Site Map. Identify in the facility's SWMP where any of the following may be exposed to precipitation or surface runoff: vents and stacks from metal processing and similar operations.

**AC. Sector AC –Electronic and Electrical Equipment and Components, Photographic and Optical Goods**

The permittee must comply with Part III sector-specific requirements associated with the facility’s primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee’s facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

**1. Covered Stormwater Discharges.**

The requirements in Sector AC apply to stormwater discharges associated with industrial activity from facilities that manufacture Electronic and Electrical Equipment and Components, Photographic and Optical goods as identified by the SIC Codes specified in Table A-1 of Appendix A of the permit.

**2. Additional Requirements.**

No additional sector-specific requirements apply.

**AD. Sector AD – Stormwater Discharges Designated by the Division Director as Requiring Permits**

The permittee must comply with Part III sector-specific requirements associated with the facility's primary industrial activity and any co-located industrial activities, as defined in Appendix C. The sector-specific requirements apply to those areas of the permittee's facility where those sector-specific activities occur. These sector-specific requirements are in addition to any requirements specified elsewhere in this permit.

**1. Covered Stormwater Discharges.**

Sector AD is used to provide permit coverage for facilities designated by the Division as needing a stormwater permit, and any discharges of stormwater associated with industrial activity that do not meet the description of an industrial activity covered by Sectors A-AC.

- a. Eligibility for Permit Coverage. Because this sector is primarily intended for use by discharges designated by the Division as needing a stormwater permit (which is an atypical circumstance), and the permittee's facility may or may not normally be discharging stormwater associated with industrial activity, the permittee must obtain the Division's written permission to use this permit prior to submitting an APPLICATION. If the permittee is authorized to use this permit, the permittee will still be required to ensure that the facility's discharges meet the basic eligibility provisions of this permit at Part I.A.

**2. Sector-Specific Benchmarks and Effluent Limits.**

The Division will establish any additional monitoring and reporting requirements for the permittee's facility prior to authorizing the permittee to be covered by this permit. Additional monitoring requirements would be based on the nature of activities at the permittee's facility and the facility's stormwater discharges.

**Appendix A. Facilities and Activities Covered**

Permit eligibility is limited to discharges from facilities in the “sectors” of industrial activity summarized in Table A-1. These sector descriptions are based on Standard Industrial Classification (SIC) Codes and Industrial Activity Codes. References to “sectors” in this permit (e.g., sector-specific monitoring requirements) refer to these groupings. A facility may be subject to more than one sector/subsector.

<b>Table A. Sectors of Industrial Activity Covered by This Permit</b>		
<b>Subsector</b>	<b>SIC Code or Activity Code<sup>1</sup></b>	<b>Activity Represented</b>
<b>Sector A – Timber Products</b>		
A1	2421	General Sawmills and Planing Mills
A2	2491	Wood Preserving
A3	2411	Log Storage and Handling
A4	2426	Hardwood Dimension and Flooring Mills
	2429	Special Product Sawmills, Not Elsewhere Classified
	2431-2439 (except 2434)	Millwork, Veneer, Plywood, and Structural Wood (see Sector W)
	2448	Wood Pallets and Skids
	2449	Wood Containers, Not Elsewhere Classified
	2451, 2452	Wood Buildings and Mobile Homes
	2493	Reconstituted Wood Products
	2499	Wood Products, Not Elsewhere Classified
A5	2441	Nailed and Lock Corner Wood Boxes and Shook
<b>Sector B – Paper and Allied Products</b>		
B1	2631	Paperboard Mills
B2	2611	Pulp Mills
	2621	Paper Mills
	2652-2657	Paperboard Containers and Boxes
	2671-2679	Converted Paper and Paperboard Products, Except Containers and Boxes
<b>Sector C – Chemical and Allied Products Manufacturing, and Refining</b>		
C1	2873-2879	Agricultural Chemicals
C2	2812-2819	Industrial Inorganic Chemicals
C3	2841-2844	Soaps, Detergents, and Cleaning Preparations; Perfumes, Cosmetics, and Other Toilet Preparations
C4	2821-2824	Plastics Materials and Synthetic Resins, Synthetic Rubber, Cellulosic and Other Manmade Fibers Except Glass
C5	2833-2836	Medicinal Chemicals and Botanical Products; Pharmaceutical Preparations; in vitro and in vivo Diagnostic Substances; and Biological Products, Except Diagnostic Substances
	2851	Paints, Varnishes, Lacquers, Enamels, and Allied Products
	2861-2869	Industrial Organic Chemicals
	2891-2899	Miscellaneous Chemical Products
	3952 (limited to list of inks and paints)	Inks and Paints, Including China Painting Enamels, India Ink, Drawing Ink, Platinum Paints for Burnt Wood or Leather Work, Paints for China Painting, Artist’s Paints and Artist’s Watercolors
	2911	Petroleum Refining
<b>Sector D – Asphalt Paving and Roofing Materials and Lubricant Manufacturing</b>		
D1	2951, 2952	Asphalt Paving and Roofing Materials
D2	2992, 2999	Miscellaneous Products of Petroleum and Coal
<b>Sector E – Glass, Clay, Cement, Concrete, and Gypsum Products</b>		
E1	3251-3259	Structural Clay Products
	3261-3269	Pottery and Related Products
E2	3271-3275	Concrete, Gypsum, and Plaster Products

E3	3211	Flat Glass
	3221, 3229	Glass and Glassware, Pressed or Blown
	3231	Glass Products Made of Purchased Glass
	3241	Hydraulic Cement
	3281	Cut Stone and Stone Products
	3291-3299	Abrasive, Asbestos, and Miscellaneous Nonmetallic Mineral Products
<b>Sector F – Primary Metals</b>		
F1	3312-3317	Steel Works, Blast Furnaces, and Rolling and Finishing Mills
F2	3321-3325	Iron and Steel Foundries
F3	3351-3357	Rolling, Drawing, and Extruding of Nonferrous Metals
F4	3363-3369	Nonferrous Foundries (Castings)
F5	3331-3339	Primary Smelting and Refining of Nonferrous Metals
	3341	Secondary Smelting and Refining of Nonferrous Metals
	3398, 3399	Miscellaneous Primary Metal Products
<b>Sector I – Oil and Gas Extraction</b>		
I1	1311	Crude Petroleum and Natural Gas
	1321	Natural Gas Liquids
	1381-1389	Oil and Gas Field Services
<b>Sector K – Hazardous Waste Treatment, Storage, or Disposal Facilities</b>		
K1	HZ	Hazardous Waste Treatment, Storage, or Disposal Facilities, including those that are operating under interim status or a permit under subtitle C of RCRA
<b>Sector L – Landfills, Land Application Sites, and Open Dumps</b>		
L1	LF	All Landfill, Land Application Sites and Open Dumps
L2	LF	All Landfill, Land Application Sites and Open Dumps, except Municipal Solid Waste Landfill (MSWLF) Areas Closed in Accordance with 40 CFR 258.60
<b>Sector M – Automobile Salvage Yards</b>		
M1	5015	Automobile Salvage Yards
<b>Sector N – Scrap Recycling and Waste Recycling Facilities</b>		
N1	5093	Scrap Recycling and Waste Recycling Facilities except Source-Separated Recycling
N2	5093	Source-separated Recycling Facility
<b>Sector O – Steam Electric Generating Facilities</b>		
O1	SE	Steam Electric Generating Facilities, including coal handling sites
<b>Sector P – Land Transportation and Warehousing</b>		
P1	4011, 4013	Railroad Transportation
	4111-4173	Local and Highway Passenger Transportation
	4212-4231	Motor Freight Transportation and Warehousing
	4311	United States Postal Service
	5171	Petroleum Bulk Stations and Terminals
<b>Sector Q – Water Transportation</b>		
Q1	4412-4499	Water Transportation Facilities
<b>Sector R – Ship and Boat Building and Repair Yards</b>		
R1	3731, 3732	Ship and Boat Building or Repairing Yards
<b>Sector S – Air Transportation</b>		
S1	4512-4581	Air Transportation Facilities
<b>Sector T – Treatment Works</b>		
T1	TW	Treatment Works treating domestic sewage or any other sewage sludge or wastewater treatment device or system, used in the storage, treatment, recycling, and reclamation of municipal or domestic sewage, including land dedicated to the disposal of sewage sludge that are located within the confines of the facility, with a design flow of 1.0 mgd or more, or required to have an approved pretreatment program under 40 CFR Part 403. Not included are farm lands, domestic gardens or lands used for sludge management where sludge is beneficially reused and which not physically located in the confines of the facility, or areas that are in are

		compliance with section 405 of the CWA.
<b>Sector U – Food and Kindred Products</b>		
U1	2041-2048	Grain Mill Products
U2	2074-2079	Fats and Oils Products
U3	2011-2015	Meat Products
	2021-2026	Dairy Products
	2032-2038	Canned, Frozen, and Preserved Fruits, Vegetables, and Food Specialties
	2051-2053	Bakery Products
	2061-2068	Sugar and Confectionery Products
	2082-2087	Beverages
	2091-2099	Miscellaneous Food Preparations and Kindred Products
	2111-2141	Tobacco Products
<b>Sector V – Textile Mills, Apparel, and Other Fabric Products</b>		
V1	2211-2299	Textile Mill Products
	2311-2399	Apparel and Other Finished Products Made from Fabrics and Similar Materials
	3131-3199	Leather and Leather Products (note: see Sector Z1 for Leather Tanning and Finishing)
<b>Sector W – Furniture and Fixtures</b>		
W1	2434	Wood Kitchen Cabinets
	2511-2599	Furniture and Fixtures
<b>Sector X – Printing and Publishing</b>		
X1	2711-2796	Printing, Publishing, and Allied Industries
<b>Sector Y – Rubber, Miscellaneous Plastic Products, and Miscellaneous Manufacturing Industries</b>		
Y1	3011	Tires and Inner Tubes
	3021	Rubber and Plastics Footwear
	3052, 3053	Gaskets, Packing and Sealing Devices, and Rubber and Plastic Hoses and Belting
	3061, 3069	Fabricated Rubber Products, Not Elsewhere Classified
Y2	3081-3089	Miscellaneous Plastics Products
	3931	Musical Instruments
	3942-3949	Dolls, Toys, Games, and Sporting and Athletic Goods
	3951-3955 (except 3952 – see Sector C)	Pens, Pencils, and Other Artists' Materials
	3961, 3965	Costume Jewelry, Costume Novelties, Buttons, and Miscellaneous Notions, Except Precious Metal
3991-3999	Miscellaneous Manufacturing Industries	
<b>Sector Z – Leather Tanning and Finishing</b>		
Z1	3111	Leather Tanning and Finishing
<b>Sector AA – Fabricated Metal Products</b>		
AA1	3411-3499 (except 3479)	Fabricated Metal Products, Except Machinery and Transportation Equipment, and Coating, Engraving, and Allied Services.
	3911-3915	Jewelry, Silverware, and Plated Ware
AA2	3479	Fabricated Metal Coating and Engraving
<b>AB. Sector AB – Transportation Equipment, Industrial or Commercial Machinery Facilities</b>		
AB1	3511-3599 (except 3571-3579)	Industrial and Commercial Machinery, Except Computer and Office Equipment (see Sector AC)
	3711-3799 (except 3731, 3732)	Transportation Equipment Except Ship and Boat Building and Repairing (see Sector R)
<b>AC. Sector AC –Electronic and Electrical Equipment and Components, Photographic and Optical Goods</b>		

AC1	3571-3579	Computer and Office Equipment
	3812-3873	Measuring, Analyzing, and Controlling Instruments; Photographic and Optical Goods, Watches, and Clocks
	3612-3699	Electronic and Electrical Equipment and Components, Except Computer Equipment
<b>AD. Sector AD – Stormwater Discharges Designated by the Division Director as Requiring Permits</b>		
AD1	Other stormwater discharges designated by the Division Director as needing a permit (see 40 CFR 122.26(a)(9)(i)(C) & (D)) or any facility discharging stormwater associated with industrial activity not described by any of Sectors A-AC. NOTE: Facilities may not elect to be covered under Sector AD. Only the Division Director may assign a facility to Sector AD.	

<sup>1</sup>A complete list of SIC Codes (and conversions from the newer North American Industry Classification System” (NAICS)) can be obtained from the Internet at [www.census.gov/epcd/www/naics.html](http://www.census.gov/epcd/www/naics.html) or in paper form from various locations in the document titled *Handbook of Standard Industrial Classifications*, Office of Management and Budget, 1987.

**Appendix B: Information Summaries**

1. Permit Required Reports and Submittals

Permit Part	Report or Submittal	Minimum Frequency	Due Date
Part I.A.3	Application for permit coverage	As necessary	90 days prior to discharge
Parts I.E and I.F	Stormwater Management Plan (SWMP)	At Division request	Within 14 days of request
Part I.K.1	Discharge Monitoring Reports	Quarterly	Each calendar quarter, no later than the 28th day of the following month
Part I.K.2.	Annual Report	Annually	March 31 of each year
Part II.A	Noncompliance notification	As necessary	As necessary

2. Permit Required Inspections and Monitoring

Permit Part	Report or Submittal	Minimum Frequency	Due Date
Part I.G	Facility Inspections	Quarterly	None
Part I.I.1	Visual monitoring	Quarterly	None
Part I.I.2	Benchmark monitoring	Quarterly	Quarterly
Part I.I.3	ELG monitoring	Annual	Annually
Part I.I.4	Water Quality Standards monitoring	Quarterly	Quarterly

3. Permit Required Onsite Documentation

Permit Part	Document Title
Part I.E.5	Stormwater Management Plan (SWMP)
Part I.E.4	Copy of Permit
Part I.E.4	Copy of Permit Certification
Part I.G.3	Site Inspection Reports
Parts I.K.5 and 6	Original Sampling Records (Field Notes and Laboratory Reports)
Parts I.F and I.K.5	Copies of Corrective Action Reports
Part I.K.2	Copies of Annual Reports

## Appendix C. Definitions and Abbreviations (for the purposes of this permit)

**Best Management Practices (BMPs)** – schedules of activities, practices (and prohibitions of practices), structures, vegetation, maintenance procedures, and other management practices to prevent or reduce the discharge of pollutants to state waters. BMPs also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage. See 5 CCR 1002-61.2(9).

**Co-located Industrial Activities** – Any industrial activities, excluding the primary industrial activity(ies), located on-site that are defined by the stormwater regulations at 5 CCR 1002-61.3(2). An activity at a facility is not considered co-located if the activity, when considered separately, does not meet the description of a category of industrial activity covered by the stormwater regulations or identified by the SIC code list in Appendix A.

**Control Measure** – refers to any BMP or other method (including effluent limitations) used to prevent or reduce the discharge of pollutants to waters of the state.

**Discharge** – when used without qualification, means the "discharge of a pollutant." See 5 CCR 1002-61.2(22).

**Discharge of a pollutant** – the introduction or addition of a pollutant into state waters. See 25-8-103(3) C.R.S.

**EPA Approved or Established Total Maximum Daily Loads (TMDLs)** – “EPA Approved TMDLs” are those that are developed by a State and approved by EPA. “EPA Established TMDLs” are those that are developed by EPA.

**Existing Discharger** – an operator applying for coverage under this permit for discharges authorized previously under an NPDES general or individual permit.

**Good Engineering, Hydrologic and Pollution Control Practices** – methods, procedures, and practices that a) are based on basic scientific fact(s); b) reflect best industry practices and standards; c) are appropriate for the conditions and pollutant sources; and d) provide appropriate solutions to meet the associated permit requirements, including all effluent limitations.

**Impaired Water** (or “Water Quality Impaired Water” or “Water Quality Limited Segment”) – A water is impaired for purposes of this permit if it has been identified by a State or EPA pursuant to Section 303(d) of the Clean Water Act as not meeting applicable State water quality standards (these waters are called “water quality limited segments” under 40 CFR 30.2(j)). Impaired waters include both waters with approved or established TMDLs, and those for which a TMDL has not yet been approved or established.

**Industrial Activity** – the 10 categories of industrial activities included in the definition of “stormwater discharges associated with industrial activity” as defined in 5 CCR 1002-61.3(2).

**Industrial Stormwater** – stormwater runoff from industrial activity.

**Material handling activities** – the storage, loading and unloading, transportation, disposal, or conveyance of any raw material, intermediate product, final product or waste product. The term excludes areas located on plant lands separate from the plant's industrial activities, such as office buildings and accompanying parking lots as long as the drainage from the excluded areas is not mixed with stormwater drained from the above described areas.

**Measurable storm event** – a storm event that results in an actual discharge from the facility.

**Minimize** – reduce and/or eliminate to the extent achievable using control measures (including best management practices) that are technologically available and economically practicable and achievable in light of best industry practice.

**Municipal Separate Storm Sewer** – a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains):

- (i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, stormwater, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA that discharges to waters of the United States;
- (ii) Designed or used for collecting or conveying stormwater;
- (iii) Which is not a combined sewer; and
- (iv) Which is not part of a Publicly Owned Treatment Works (POTW). See 5 CCR 1002-61.2(62).

**New Discharger** – means any building, structure, facility, or installation from which there is or may be a discharge of pollutants that did not commence at the particular site before August 13, 1979, that is not a new source, and that has never received a final effective permit for discharges at the site. See 5 CCR 1002-61.2(65).

**New Source** – means any building, structure, facility, or installation from which there is or may be a discharge of pollutants, the construction of which commenced after the promulgation of standards of performance for the particular source, pursuant to section 306 of the Clean Water Act. The term also applies where a standard of performance has been proposed, provided that the standard is promulgated within 120 days of its proposal. Except as otherwise provided in an applicable new source performance standard, a source is a “new source” if it meets this definition of “new source”, and:

- (a) It is constructed at a site at which no other source is located; or
- (b) It totally replaces the process or production equipment that causes the discharge of pollutants at an existing source; or
- (c) Its processes are substantially independent of an existing source at the same site. In determining whether these processes are substantially independent, the Division shall consider such factors as the extent to which the new facility is integrated with the existing plant; and the extent to which the new facility is engaged in the same general type of activity as the existing source. See 5 CCR 1002-61.2(67).

**New Source Performance Standards (NSPS)** – technology-based standards for facilities that qualify as new sources under 40 CFR 122.2 and 40 CFR 122.29.

**No exposure** – all industrial materials or activities are protected by a storm-resistant shelter to prevent exposure to rain, snow, snowmelt, and/or runoff. 5 CCR 1002-61.3(2)(h).

**Operator** – any entity with a stormwater discharge associated with industrial activity that meets either of the following two criteria:

- (i) The entity has operational control over industrial activities, including the ability to modify those activities; or
- (ii) The entity has day-to-day operational control of activities at a facility necessary to ensure compliance with the permit (e.g., the entity is authorized to direct workers at a facility to carry out activities required by the permit).

**Outstanding Waters** – For antidegradation purposes, pursuant to outstanding waters are identified by states as having high quality waters constituting an Outstanding Natural Resource Water (ONRW), such as waters of National Parks and State Parks, wildlife refuges, and waters of exceptional recreational or ecological significance.

**Person** – an individual, corporation, partnership, association, state or political subdivision thereof, federal agency, state agency, municipality, Commission, or interstate body. See 5 CCR 1002-61.2(73).

**Point source** – any discernible, confined, and discrete conveyance, including, but not limited to, any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged. "Point Source" does not include irrigation return flow. See 5 CCR 1002-61.2(75).

**Pollutant** – dredged spoil, dirt, slurry, solid waste, incinerator residue, sewage, sewage sludge, garbage, trash, chemical waste, biological nutrient, biological material, radioactive material, heat, wrecked or discarded equipment, rock, sand, or any industrial, municipal or agricultural waste. See 5 CCR 1002-61.2(76).

**Primary industrial activity** – includes any activities performed on-site which are (1) identified by the facility’s primary SIC code; or (2) included in the narrative descriptions of 5 CCR 1002-61.3(2). [For co-located activities covered by multiple SIC codes, it is recommended that the primary industrial determination be based on the value of receipts or revenues or, if such information is not available for a particular facility, the number of employees or production rate for each process may be compared. The operation that generates the most revenue or employs the most personnel is the operation in which the facility is primarily engaged. In situations where the vast majority of on-site activity falls within one SIC code, that activity may be the primary industrial activity.]

**Qualified Personnel** – Qualified personnel are those who possess the knowledge and skills to assess conditions and activities that could impact stormwater quality at a facility, and who can also evaluate the effectiveness of control measures.

**Reportable Quantity Release** – a release of a hazardous substance at or above the established legal threshold that requires emergency notification. Refer to 40 CFR Parts 110, 117, and 302 for complete definitions and reportable quantities for which notification is required.

**Reviewable Waters** – For antidegradation purposes, reviewable waters are characterized as having water quality that exceeds the levels necessary to support propagation of fish, shellfish, and wildlife and recreation in and on the water.

**Significant materials** – includes, but is not limited to raw materials; fuels; materials such as solvents, detergents, and plastic pellets; finished materials such as metallic products; raw materials used in food processing or production; hazardous substances designated under Section 101(14) of CERCLA as amended by SARA (1986); any chemical the facility is required to report pursuant to Section 313 of Title III of SARA (1986); fertilizers; pesticides; and waste products such as ashes, slag and sludge that have the potential to be released with stormwater discharges. See 5 CCR 1002-61.2(76).

**Significant spills and leaks** – include, but are not limited to, releases of oil or hazardous substances in excess of quantities that are reportable under CWA Section 311 (see 40 CFR 110.6 and 40 CFR 117.21) or Section 102 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), 42 USC §9602. This permit does not relieve the permittee of the reporting requirements of 40 CFR 110, 40 CFR 117, and 40 CFR 302 relating to spills or other releases of oils or hazardous substances.

**Stormwater** – stormwater runoff, snow melt runoff, and surface runoff and drainage. See 5 CCR 1002-61.2(103).

**Stormwater Discharges Associated with Industrial Activity** – the discharge from any conveyance that is used for collecting and conveying stormwater and which is directly related to manufacturing, processing or raw materials storage areas at an industrial plant. Except for the provision of 61.3(2)(c) that addresses construction activities associated with oil and gas operations or facilities, the term does not include discharges from facilities or activities excluded from the NPDES program under 40 CFR Part 122 or the CDPS program under Regulation No. 61.

For the categories of industries identified in this permit, the term includes, but is not limited to, stormwater discharges from industrial plant yards; immediate access roads and rail lines used or traveled by carriers of raw materials, manufactured products, waste material, or by-products used or created by the facility; material handling sites; refuse sites; sites used for the application or disposal of process waste waters; sites used for the storage and maintenance of material handling equipment; sites used for residual treatment, storage, or disposal; shipping and receiving areas; manufacturing buildings; storage areas (including tank farms) for raw materials, and intermediate and final products; and areas where industrial activity has taken place in the past and significant materials remain and are exposed to stormwater. See 5 CCR 1002-61.3(2)(e).

**Total Maximum Daily Loads (TMDLs)** – A TMDL is a calculation of the maximum amount of a pollutant that a waterbody can receive and still meet water quality standards, and an allocation of that amount to the pollutant's sources. A TMDL includes wasteload allocations (WLAs) for point source discharges; load allocations (LAs) for nonpoint sources and/or natural background, and must include a margin of safety (MOS) and account for seasonal variations. (See section 303(d) of the Clean Water Act and 40 CFR 130.2 and 130.7).

**Water Quality Impaired** – See ‘Impaired Water’.

**Water Quality Standards** – means a narrative and/or numeric restriction established by the Commission applied to state surface waters to protect one or more beneficial uses of such waters. Whenever only numeric or only narrative standards are intended, the wording shall specifically designate which is intended. See 5 CCR 1002- 31.5(37).

**ABBREVIATIONS**

BMP – Best Management Practice  
CDPS – Colorado Discharge Permit System  
CERCLA – Comprehensive Environmental Response, Compensation and Liability Act  
COD – Chemical Oxygen Demand  
CWA – Clean Water Act (or the Federal Water Pollution Control Act, 33 U.S.C. §1251 *et seq*)  
DMR – Discharge Monitoring Report  
EPA – U. S. Environmental Protection Agency  
NPDES – National Pollutant Discharge Elimination System (change to)  
NSPS – New Source Performance Standard  
RCRA – Resource Conservation and Recovery Act  
SARA – Superfund Amendments and Reauthorization Act  
SIC – Standard Industrial Classification  
SPCC – Spill Prevention, Control, and Countermeasures  
SWMP – Stormwater Management Plan  
TMDL – Total Maximum Daily Load  
TSDf – Treatment, Storage, or Disposal Facility  
TSS – Total Suspended Solids  
USGS – United States Geological Survey  
WQS – Water Quality Standard

**APPENDIX A2**  
**TABLE A-1 CONTROL MEASURES**

---

**Table A-1 CONTROL MEASURES**

**GOOD HOUSEKEEPING (GH)**

**Airport Activities:**

- Day-to-day operations

**Potential Pollutants:**

- Equipment/vehicle fluids (hydraulic fluid, antifreeze, lubricants, oil/grease) • Degreasers
- Cleaning products

**Control Measures:**

GH-1	Minimize and recycle non-usable equipment and materials.
GH-2	Pick up and properly dispose of loose materials; scrap; trash; wastewater; and old, unused or excess drums and containers.
GH-3	Clean fueling, spill and leak areas and other stained paved areas frequently.
GH-4	Store all vehicles and equipment on impervious surfaces (concrete/asphalt).
GH-5	Use dry materials for cleanup of liquids and dispose of properly.
GH-6	Use drip pans or absorbent pads to collect fluid drainage during fluid changes or leaking equipment.
GH-7	Conduct routine inspections for leaks and condition of drums and other containers.
GH-8	Collect used rags, towels, absorbent materials and properly contain and dispose.
GH-9	Properly dispose of unused product and chemicals.
GH-10	Recover solvents, waste fuels and oils, fuel filters, oil filters and properly contain until taken off-site for proper disposal.
GH-11	Keep work areas clean and free of debris.
GH-12	Properly label all products, chemicals, containers, and drums.
GH-13	Keep outdoor equipment and vehicles free of grease and oil buildup.

**Non-Compliance Items:**

- Disposal of used absorbents into trash; disposal of wastewater from cleaning activities into storm drains; leaking fluids that reach storm drains.

**Inspections/Maintenance/Training:**

- Conduct routine inspections of site or operating area for leaks, unused materials, products, or equipment.
- Periodic (at least once per calendar year) cleaning
- Train employees in good housekeeping control measures/best management practices

**Applicable Regulations (not all inclusive):**

- 40 CFR 122-124 NPDES Regulations for Stormwater Discharges
- 5 CCR 1002-61 Colorado Discharge Permit System
- 33 CFR Parts 320-330 Navigation and Navigable Water
- 40 CFR 110.3 Discharge of Oil
- 40 CFR 117.3 Determination of Reportable Quantities for a Hazardous Substance
- 40 CFR 302 Designation, Reportable Quantities and Notification Requirements for Hazardous Substances under CERCLA
- 40 CFR 372 Chemical Release Reporting: Community Right-to-Know

## MINIMIZE EXPOSURE (ME)

### Airport Activities:

- Storage and handling, outdoor storage of materials, chemicals, and petroleum products
- Fueling, maintenance, waste disposal, construction activities

### Potential Pollutants:

- Vehicle/Equipment fluids
- Oil and grease
- Solvents
- Fuel

### Control Measures:

ME-1	Store chemicals and containerized petroleum products indoors or under cover when possible.
ME-2	Chemicals stored outdoors must have a secure cover and on or within secondary containment; containers should be free of residue.
ME-3	Equipment/vehicle maintenance should be done indoors or under cover when applicable; outdoor maintenance needs to utilize spill pans.
ME-4	Drums or other containers that must be stored outside should be stored on pallets or secondary containment to prevent contact with stormwater. Inspect all containers for leaks on a routine basis.
ME-5	Use tarp or other heavy duty cover over contaminated soil or other material that is temporarily stored outside.

### Non-Compliance Items:

- Outdoor storage of chemicals in containers that are in bad condition
- Leaking containers, equipment
- Contaminated material exposed to precipitation

### Inspections/Maintenance/Training:

- Regularly inspect all outdoor storage containers, equipment, waste dumpsters
- Visually inspect containers, tanks for structural failure; check for leaks and spills
- Maintain training records

### Applicable Regulations (not all inclusive):

- 40 CFR Part 122 National Pollutant Discharge Elimination System
- 5 CCR 1002-61 Colorado Discharge Permit System
- 40 CFR 110.3 Discharge of Oil
- 40 CFR 117.3 Determination of Reportable Quantities for a Hazardous Substance
- 40 CFR 302 Designation, Reportable Quantities and Notification Requirements for Hazardous Substances under CERCLA
- 40 CFR 372 Chemical Release Reporting: Community Right-to-Know

## NON-STORMWATER DISCHARGES (NS)

### Airport Activities:

- Washing aircraft, equipment, vehicles, dewatering of footing drains, contaminated groundwater, non-potable water discharges, process waste water, etc.

### Potential Pollutants:

- Dumpster waste
- Chemicals
- Oils/greases
- Sediment
- Vehicle fluids
- Solvents, cleaning fluids
- Metals
- Sediment
- Rubber particles
- Detergents

### Control Measures:

NS-1	Contain/berm areas for non-stormwater discharges and properly dispose offsite.
NS-2	Use dry cleaning and surface preparation techniques where feasible.
NS-3	Educate staff on non-stormwater discharges.
NS-4	Routinely inspect areas for non-stormwater discharges.

### Non-Compliance Items:

- Releasing non-stormwater discharges to storm drains, waters of the U.S., drainage ditches, swales, detention ponds

### Inspections/Maintenance/Training:

- Perform routine inspections for non-stormwater discharges
- Educate staff on appropriate disposal of wastewater

### Applicable Regulations (not all inclusive):

- 40 CFR Part 122 National Pollutant Discharge Elimination System
- 5 CCR 1002-61 Colorado Discharge Permit System
- 40 CFR 110.3 Discharge of Oil
- 40 CFR 117.3 Determination of Reportable Quantities for a Hazardous Substance
- 5 CCR 1001-5 Stationary Source Permitting and Air Pollutant Emission Notice Requirements
- 40 CFR 302 Designation, Reportable Quantities and Notification Requirements for Hazardous Substances under CERCLA
- 40 CFR 372 Chemical Release Reporting: Community Right-to-Know

## MANAGEMENT OF RUNOFF/STRUCTURAL CONTROLS (MR)

### Airport Activities:

- Use of structural controls including berms, silt fences, vegetative swales, etc.

### Potential Pollutants:

- Sediment
- Chemicals
- Pesticides/Herbicides
- Trash/debris
- Oil and Grease

### Control Measures:

MR-1	Divert, infiltrate, or treat stormwater runoff to minimize pollutants.
MR-2	Use structural controls (silt fence, berms, etc.) to minimize runoff where practicable.
MR-3	Reseed/revegetate bare areas to minimize erosion and sediment runoff.

### Non-Compliance Items

- Not inspecting and/or maintaining structural controls
- Illegal dumping and discharge of non-stormwater discharges

### Inspections/Maintenance/Training

- Structural controls should be inspected at regular intervals to ensure they are functioning properly and if maintenance is required
- Clean storm drain inlets and other stormwater structures to remove sediment and debris
- Provide stormwater/erosion control training
- Keep records of inspections and maintenance

### Applicable Regulations (not all inclusive):

- 33 CFR Parts 320-330 Navigation and Navigable Waters
- 40 CFR Part 122 National Pollutant Discharge Elimination System
- 5 CCR 1002-61 Colorado Discharge Permit System
- 40 CFR 110.3 Discharge of Oil
- 40 CFR 117.3 Determination of Reportable Quantities for a Hazardous Substance
- 40 CFR 401 Effluent Limitation

## PREVENTATIVE MAINTENANCE OF CONTROL MEASURES (PM)

### Airport Activities:

- Maintenance of equipment and systems
- Maintenance of stormwater management devices

### Potential Pollutants:

- Oil/grease
- Sediment

### Control Measures:

PM-1	Perform routine inspection and maintenance of stormwater management devices (e.g., cleaning oil/water separators, removing debris from catch basins).
PM-2	Inspect and test equipment and systems to uncover conditions that could cause breakdowns or failure resulting in the discharge of pollutants to surface waters.
PM-3	Ensure appropriate maintenance of equipment and systems.
PM-4	Ensure timely repair or replacement of any control measures.
PM-5	Inspect berms, dikes, curbs, tanks, and other retention devices.
PM-6	Perform preventative and routine maintenance, modification, repair, replacement, or installation of new control measures.

### Non-Compliance Items:

- Not inspecting and/or maintaining control measures

### Inspections/Maintenance/Training:

- Timely inspection and maintenance of stormwater management devices (e.g., cleaning oil/water separators, removing debris from catch basins)
- Inspecting and testing equipment and systems to uncover conditions that could cause breakdowns or failure resulting in the discharge of pollutants to surface waters

### Applicable Regulations (not all inclusive):

- 33 CFR Parts 320-330 Navigation and Navigable Waters
- 40 CFR Part 122 National Pollutant Discharge Elimination System
- 5 CCR 1002-61 Colorado Discharge Permit System
- 40 CFR 110.3 Discharge of Oil
- 40 CFR 117.3 Determination of Reportable Quantities for a Hazardous Substance

## SPILL PREVENTION AND RESPONSE (SR)

### Airport Activities:

- Operation of equipment, product use, product storage, maintenance of equipment/vehicles, fueling, fuel storage

### Potential Pollutants:

- Oil/grease
- Chemicals
- Fuel
- Solvents

### Control Measures:

SR-1	Develop and maintain a spill prevention plan or spill procedure, including training.
SR-2	Provide containment around potential spill sources.
SR-3	Divert spills from stormwater drains/inlets.
SR-4	Keep spills and clean up materials available and properly dispose of after use.
SR-5	Control and prevent spills during fuel and deicing/anti-icing fluid transfers.
SR-6	Perform deicing and anti-icing only in areas designated by the Airport.
SR-7	Use drip pans or other collection devices in heavily used areas.
SR-8	Use containment methods on liquid storage tanks and containers that contain regulated materials.
SR-9	Post signage with emergency contacts at all fuel and chemical storage locations.

### Non-Compliance Items:

- Not reporting spills to Airport that reach storm drains
- Not reporting spills at least 25 gallons or larger
- Improperly disposing of used spill absorbents
- Not providing annual Spill Prevention Control & Countermeasure (SPCC) training

### Inspections/Maintenance/Training:

- Provide annual spill/SPCC training
- Perform routine inspections of equipment/vehicles, containers, product for leaks and spills

### Applicable Regulations (not all inclusive):

- 33 CFR Parts 320-330 Navigation and Navigable Waters
- 40 CFR Part 122 National Pollutant Discharge Elimination System
- 5 CCR 1002-61 Colorado Discharge Permit System
- 40 CFR 112 Oil Pollution Prevention
- 40 CFR 110.3 Discharge of Oil
- 40 CFR 117.3 Determination of Reportable Quantities for a Hazardous Substance
- 40 CFR 302 Designation, Reportable Quantities and Notification Requirements for Hazardous Substances under CERCLA
- 40 CFR 372 Chemical Release Reporting: Community Right-to-Know

## SEDIMENT AND EROSION CONTROL (SE)

### Airport Activities:

- Construction projects, maintenance of stormwater structural controls.

### Potential Pollutants:

- Sediment
- Trash
- Oil/grease

### Control Measures:

SE-1	Reduce erosion in unpaved areas.
SE-2	Reduce erosion in earthen channels.
SE-3	Inspect and repair (if necessary) detention ponds and vegetative swales to assure proper function.
SE-4	Maintain vegetation or stone buffers to prevent erosion.
SE-5	Use silt fences, erosion blankets, hay bales and other sediment/erosion structural controls during construction.
SE-6	Minimize disturbed areas and protect natural features and soil.

### Non-Compliance Items:

- Runoff from sediment
- Not performing inspections or maintenance on sediment and erosion controls

### Inspections/Maintenance/Training:

- Perform routine inspections/maintenance on structural controls

### Applicable Regulations (not all inclusive):

- 33 CFR Parts 320-330 Navigation and Navigable Waters
- 40 CFR Part 122 National Pollutant Discharge Elimination System
- 5 CCR 1002-61 Colorado Discharge Permit System
- 40 CFR 110.3 Discharge of Oil

## STORAGE AND HANDLING (SH)

### Airport Activities:

- Maintenance
- Fueling
- Storage

### Potential Pollutants:

- Oils & greases
- Vehicle fluids
- Fuel
- Lubricants
- Paints
- Battery Acid
- Solvents

### Control Measures:

SH-1	Store flammable and corrosive chemicals/products in flammable cabinets.
SH-2	Store all materials in original containers, properly labeled with lids sealed tight.
SH-3	Ensure SDS is readily available for all products.
SH-4	Protect all material handling activities such as loading/unloading from precipitation.
SH-5	Transfer liquids on paved surfaces and away from stormwater drains.
SH-6	Reduce the amount of storage outside.
SH-7	Store drums and containers on pallets or other structures to keep the container out of contact with stormwater.
SH-8	Inspect storage areas frequently for leaks, trash or debris.

### Non-Compliance Items:

- Improper disposal of unused chemicals/products
- Disposal of chemicals/products into storm sewer or sanitary sewer
- Not reporting discharge of chemicals/product to storm drains or spill of 25 gallons or greater

### Inspections/Maintenance/Training:

- Perform routine inspections of all storage areas
- Train staff in storage procedures
- Train employees in spill prevention and clean-up procedures

### Applicable Regulations (not all inclusive):

- 33 CFR Parts 320-330 Navigation and Navigable Waters
- 40 CFR Part 122 National Pollutant Discharge Elimination System
- 5 CCR 1002-61 Colorado Discharge Permit System
- 40 CFR 110.3 Discharge of Oil
- 40 CFR 117.3 Determination of Reportable Quantities for a Hazardous Substance
- 40 CFR 261-282 Federal RCRA Regulations
- 40 CFR 401 Effluent Limitation Guidelines
- 6 CCR 1007-3, Part 261 State RCRA Regulations
- 5 CCR 1001-3 Stationary Source Permitting And Air Pollutant Emission Notice Requirements

## SALT/SAND STORAGE PILES (SP)

### Airport Activities:

- Storage of salt or sand stockpiles for deicing pavement.

### Potential Pollutants:

- Salt
- Sand

### Control Measures:

SP-1	Protect all stockpiles from stormwater run-on using a berms, dikes, fiber rolls, silt fences, sandbag, gravel bags, or straw bale barriers.
SP-2	Locate stockpiles a minimum of 50 ft away from concentrated flows of stormwater, drainage courses, and inlets.
SP-3	Locate stockpiles indoors or under cover.

### Non-Compliance Items:

- Discharge of salt or sand to storm drains or conveyances

### Inspections/Maintenance/Training:

- Inspect salt and sand stockpiles routinely and ensure covers and/or structural containment is operating effectively
- Perform routine maintenance on structural containment

### Applicable Regulations (not all inclusive):

- 33 CFR Parts 320-330 Navigation and Navigable Waters
- 40 CFR Part 122 National Pollutant Discharge Elimination System
- 5 CCR 1002-61 Colorado Discharge Permit System

## WASTE MANAGEMENT (WM)

### Airport Activities:

- Generation of waste during day-to-day operations; construction waste

### Potential Pollutants:

- Dumpster waste
- Chemicals
- Oil/grease
- Solvents/cleaners
- Construction waste

### Control Measures:

WM-1	Check waste disposal areas on a regular basis for leaks.
WM-2	Use waste collection containers for non-regulated wastes.
WM-3	Keep all waste/trash containers closed when not in use.
WM-4	Reduce amount of waste generated by recycling whenever possible.
WM-5	Properly dispose of vacuum-swept material.
WM-6	Properly dispose of construction debris and residuals from maintenance of paved areas.

### Non-Compliance Items:

- Improper disposal of waste
- Disposal of chemicals, oil/grease, hazardous waste into dumpster waste
- Not disposing of construction waste off-site

### Inspections/Maintenance/Training:

- Routine inspections of waste disposal areas for leaks, closed containers
- Perform spill training annually
- Train staff on proper disposal of non-dumpster waste

### Applicable Regulations (not all inclusive):

- 6 CCR 1007-2 CO Solid Waste Regulations
- 6 CCR 1007-3 CO Hazardous Waste Regulations
- 33 CFR Parts 320-330 Navigation and Navigable Waters
- 40 CFR 110.3 Discharge of Oil
- 40 CFR 117.3 Determination of Reportable Quantities for a Hazardous Substance
- 40 CFR 122 NPDES Regulations for Stormwater Discharges
- City of Colorado Springs, City Code, Certificate of Designation, Land Development and Zoning
- El Paso County, CO, Certificate of Designation, Land Development and Zoning

## GROUNDS MAINTENANCE (GM)

### Airport Activities:

- Cleaning, maintenance of outdoor grounds including sweeping, washing, landscaping, irrigation, and pesticide/herbicide applications.

### Potential Pollutants:

- Chemicals
- Oil/Grease
- Sediment
- Detergents
- Landscape waste

### Control Measures:

GM-1	Outdoor washing of grounds/buildings may only be done if water is contained and reclaimed and does not reach storm drains.
GM-2	Perform regular sweeping of grounds and properly dispose of trash and debris.
GM-3	Properly dispose of landscape waste.
GM-4	Regularly clean paved areas where equipment is used and stored.
GM-5	Ensure proper management and application of any pesticides, herbicides or fertilizers.

### Non-Compliance Items:

- Disposal of waste into storm drains
- Improper waste disposal

### Inspections/Maintenance/Training:

- Annual stormwater training

### Applicable Regulations (not all inclusive):

- 40 CFR Part 122 National Pollutant Discharge Elimination System
- 5 CCR 1002-61 Colorado Discharge Permit System
- 6 CCR 1007-2 CO Solid Waste Regulations
- 6 CCR 1007-3 CO Hazardous Waste Regulations
- 33 CFR Parts 320-330 Navigation and Navigable Waters
- 40 CFR 110.3 Discharge of Oil
- 40 CFR 117.3 Determination of Reportable Quantities for a Hazardous Substance
- 40 CFR 302 Designation, Reportable Quantities and Notification Requirements for Hazardous Substances under CERCLA

## DUST CONTROL/VEHICLE TRACKING (DV)

### Airport Activities:

- Daily use of unpaved vehicle service roads or dirt haul roads for construction activities.

### Potential Pollutants:

- Sediment

### Control Measures:

DV-1	Utilize vehicle tracking through gravel entryways for construction projects.
DV-2	Utilize vehicle tracking through gravel entryways for stockpile areas.
DV-2	Utilize water truck on dirt roads to minimize dust.
DV-3	Seed and mulch disturbed areas.
DV-4	Protect existing vegetation.
DV-5	Minimize generation of dust and off-site tracking of sediment.

### Non-Compliance Items:

- Sediment in storm drains

### Inspections/Maintenance/Training:

- Inspect vehicle tracking areas daily
- Areas used for stockpile areas should have appropriate vehicle tracking structures
- Clean sediment off of pavement to prevent discharge to storm drains

### Applicable Regulations (not all inclusive):

- 40 CFR Part 122 National Pollutant Discharge Elimination System
- 5 CCR 1002-61 Colorado Discharge Permit System
- 40 CFR 401 Effluent Limitation Guidelines
- 5 CCR 1001 – CO Regulation Number 3 - Stationary Source Permitting And Air Pollutant Emission Notice Requirements

## TRAINING AND RECORD KEEPING (TR)

### Airport Activities:

- Stormwater Training and Recordkeeping

### Potential Pollutants:

- Not Applicable

### Control Measures:

TR-1	Ensure all employees have annual SWMP Training.
TR-2	Ensure all employees have annual SPCC or spill training.
TR-3	Educate and ensure contractors on-site are utilizing control measures.
TR-4	Ensure all stormwater inspections, certifications and other stormwater documents are kept electronically or with SWMP for at least 3 years after permit expires.

### Non-Compliance Items:

- Staff not receiving annual training

### Inspections/Maintenance/Training:

- Ensure all staff participates in annual stormwater training

### Applicable Regulations (not all inclusive):

- 40 CFR Part 122 National Pollutant Discharge Elimination System
- 5 CCR 1002-61 Colorado Discharge Permit System

## AIRCRAFT/GROUND VEHICLE/EQUIPMENT MAINTENANCE (EM)

### Airport Activities:

- Maintenance on aircraft, ground vehicles, equipment

### Potential Pollutants:

- |  |   |
|--|---|
| <ul style="list-style-type: none"> <li>• Oil/Grease</li> <li>• Sediment</li> <li>• Detergents</li> <li>• Vehicle fluids</li> </ul> | <ul style="list-style-type: none"> <li>• Solvents/Cleaners</li> <li>• Fuel</li> <li>• Metals</li> <li>• Battery acid</li> </ul> |
|--|---|

### Control Measures:

EM-1	Perform routine inspections: inspect and repair leaks from aircraft, vehicles, machines, tanks, piping, and other equipment that could release pollutants to stormwater.
EM-2	Store materials under cover, when possible.
EM-3	Maintenance activities should be performed indoors or under cover whenever possible.
EM-4	If outdoor maintenance is required, use a means of containment for potential spills or leaks and designate an area away from storm drains.
EM-5	Use drip pan for leaking vehicles and when vehicles are being repaired or maintenance is being performed.
EM-6	Have a designated area for vehicle fluid changes.
EM-7	Ensure vehicle maintenance is not performed near stormwater drains.
EM-8	Liquid wastes cannot be poured into sanitary sewer drains. Need to ensure properly disposed through environmental disposal company or taken to recycling facility.
EM-9	Batteries should be stored under cover and within secondary containment.
EM-10	Drain/crush and recycle and/or properly dispose of used oil filters.
EM-11	Conduct maintenance in areas with runoff controls.

### Non-Compliance Items:

- Performing maintenance activities in unauthorized areas
- Discharge of fluids to storm sewer or sanitary sewer
- Spills/leaks washed into storm drains

### Inspections/Maintenance/Training:

- Routine inspections and correcting non-compliance items
- Spill prevention training

### Applicable Regulations (not all inclusive):

- 40 CFR Part 122 National Pollutant Discharge Elimination System
- 5 CCR 1002-61 Colorado Discharge Permit System
- 40 CFR 401 Effluent Limitation Guidelines
- 6 CCR 1007-2 CO Solid Waste Regulations
- 6 CCR 1007-3 CO Hazardous Waste Regulations
- 33 CFR Parts 320-330 Navigation and Navigable Waters
- 40 CFR 110.3 Discharge of Oil
- 40 CFR 117.3 Determination of Reportable Quantities for a Hazardous Substance
- 40 CFR 261-282 Federal RCRA Regulations
- 6 CCR 1007-3, Part 261 State RCRA Regulations
- 40 CFR 302 Designation, Reportable Quantities and Notification Requirements for Hazardous Substances under CERCLA
- 40 CFR 372 Chemical Release Reporting: Community Right-to-Know

## AIRCRAFT/GROUND VEHICLE/EQUIPMENT CLEANING (EC)

### Airport Activities:

- Washing/cleaning aircraft, ground vehicles and equipment.

### Potential Pollutants:

- Oil/Grease
- Detergents/cleaning products
- Solvents
- Sediment
- Fuel
- Vehicle/Equipment fluids (hydraulic fluid, antifreeze, etc.)

### Control Measures:

EC-1	Clean aircraft/ground vehicles and equipment in designated areas only.
EC-2	Contain and properly dispose of equipment, vehicle, and aircraft wash water.
EC-3	Airlines should use terminal wash bays for equipment and vehicle cleaning.
EC-4	Cleaning agents and/or detergents are prohibited unless used in wash bays or contained and properly disposed.

### Non-Compliance Items:

- Allowing wash water including cleaning products/detergents to wash into storm drains
- Not properly containing and disposing wastewater
- Not washing/cleaning in designated areas

### Inspections/Maintenance/Training:

- Ensure washing activities are done in approved and/or designated areas
- Inspect areas used for washing/cleaning to ensure detergents are not being used and if they are, that all wash water is properly contained and properly disposed
- Train staff on appropriate measures for washing/cleaning vehicles/equipment
- Maintain wash bays and provide regular maintenance of oil/water separators

### Applicable Regulations (not all inclusive):

- 40 CFR Part 122 National Pollutant Discharge Elimination System
- 5 CCR 1002-61 Colorado Discharge Permit System
- 40 CFR 401 Effluent Limitation Guidelines
- 6 CCR 1007-2 CO Solid Waste Regulations
- 6 CCR 1007-3 CO Hazardous Waste Regulations
- 33 CFR Parts 320-330 Navigation and Navigable Waters
- 40 CFR 110.3 Discharge of Oil
- 40 CFR 117.3 Determination of Reportable Quantities for a Hazardous Substance
- 40 CFR 261-282 Federal RCRA Regulations
- 6 CCR 1007-3, Part 261 State RCRA Regulations
- 40 CFR 302 Designation, Reportable Quantities and Notification Requirements for Hazardous Substances under CERCLA
- 40 CFR 372 Chemical Release Reporting: Community Right-to-Know

## AIRCRAFT/GROUND VEHICLE/EQUIPMENT STORAGE (ES)

### Airport Activities:

- Outside storage of aircraft, ground vehicles or equipment.

### Potential Pollutants:

- Oil/Grease
- Solvents
- Fuel
- Vehicle/Equipment fluids (hydraulic fluid, antifreeze, etc.)
- Deicing/anti-icing fluids

### Control Measures:

ES-1	Store vehicles/equipment on pavement.
ES-2	Use drip pans for leaking equipment.
ES-3	Ensure fuel delivery vehicles are positioned within a secondary containment area.
ES-4	Inspect storage areas frequently for leaks, trash or debris.
ES-5	Maintain ground support equipment and vehicles to prevent leaks and releases.
ES-6	Maintain and clean pavement stains/leaks on a regular basis.

### Non-Compliance Items:

- Improperly storing materials or equipment
- Storing vehicles or equipment on dirt
- Storing vehicles or equipment over storm drains
- Not reporting significant spills or leaks to Airport

### Inspections/Maintenance/Training:

- Perform routine inspections in storage areas for leaks, spills, debris or trash
- Perform regular maintenance on outside storage items to prevent leaks
- Train staff on control measures
- Train staff on spill measures

### Applicable Regulations (not all inclusive):

- 40 CFR Part 122 National Pollutant Discharge Elimination System
- 5 CCR 1002-61 Colorado Discharge Permit System
- 40 CFR 401 Effluent Limitation Guidelines
- 6 CCR 1007-2 CO Solid Waste Regulations
- 6 CCR 1007-3 CO Hazardous Waste Regulations
- 33 CFR Parts 320-330 Navigation and Navigable Waters
- 40 CFR 110.3 Discharge of Oil
- 40 CFR 117.3 Determination of Reportable Quantities for a Hazardous Substance
- 40 CFR 261-282 Federal RCRA Regulations
- 6 CCR 1007-3, Part 261 State RCRA Regulations
- 40 CFR 302 Designation, Reportable Quantities and Notification Requirements for Hazardous Substances under CERCLA
- 40 CFR 372 Chemical Release Reporting: Community Right-to-Know

## FUELING (FL)

### Airport Activities:

- Fueling of aircraft, equipment, and vehicles

### Potential Pollutants:

- Fuel
- Fuel additives
- Heavy metals

### Control Measures:

FL-1	Contain leaks during transfers.
FL-2	Fuel only in designated locations.
FL-3	Do not fuel during precipitation events.
FL-4	Immediately clean up any leaks or spills.
FL-5	Protect any storm drains located near fueling areas using mats, socks, berms, etc.
FL-6	Inspect fueling tanks for leaks.
FL-7	Do not overfill tanks – “top off.”
FL-8	Use drip pans/absorbents under hoses.
FL-9	Maintain good records of fuel.
FL-10	Train employees on proper fueling housekeeping techniques.

### Non-Compliance Items:

- Not reporting significant spill or leak to Airport
- Discharge of fuel to storm drain
- Not properly cleaning up spills/leaks
- Improper disposal of used absorbents

### Inspections/Maintenance/Training:

- Perform regular inspections of fueling tanks and fueling areas to ensure proper operation
- Train staff on spill measures

### Applicable Regulations (not all inclusive):

- 40 CFR 112 Oil Pollution Prevention
- 40 CFR Part 122 National Pollutant Discharge Elimination System
- 5 CCR 1002-61 Colorado Discharge Permit System
- 40 CFR 401 Effluent Limitation Guidelines
- 6 CCR 1007-3 CO Hazardous Waste Regulations
- 33 CFR Parts 320-330 Navigation and Navigable Waters
- 40 CFR 110.3 Discharge of Oil
- 40 CFR 117.3 Determination of Reportable Quantities for a Hazardous Substance

## DEICING/ANTI-ICING (DA)

### Airport Activities:

- Deicing/Anti-icing of aircraft and pavement surfaces.

### Potential Pollutants:

- Deicing/anti-icing fluids

### Control Measures:

DA-1	Collect deicing/anti-icing fluids during periods of application to aircraft.
DA-2	Conduct routine inspections of deicing areas and areas where deicing product is stored.
DA-3	Perform training for all personnel involved with deicing operations.
DA-4	Transfer deicing agents only in paved areas.
DA-5	Record quantities of all deicing material used during deicing months.

### Non-Compliance Items:

- Using urea or ethylene glycol
- Discharging deicing/anti-icing fluid on ramp during non-deicing season
- Not reporting significant spill or leak to Airport

### Inspections/Maintenance/Training:

- Conduct routine inspections of glycol tanks
- Conduct monthly inspections during deicing activities
- Train staff on spill measures

### Applicable Regulations (not all inclusive):

- 40 CFR Part 122 National Pollutant Discharge Elimination System
- 5 CCR 1002-61 Colorado Discharge Permit System
- 40 CFR 117.3 Determination of Reportable Quantities for a Hazardous Substance
- 40 CFR 401 Effluent Limitation
- 33 CFR Parts 320-330 Navigation and Navigable Waters

## LAVATORY EQUIPMENT OPERATION/SERVICING (LE)

### Airport Activities:

- Performing lavatory service operations, servicing lavatory equipment or storing lavatory equipment.

### Potential Pollutants:

- Lavatory chemicals
- Lavatory waste
- Lavatory wash water

### Control Measures:

LE-1	Perform regular inspections on lavatory equipment.
LE-2	Perform surfactant/disinfectant mixing and transfers in the lavatory bay facility only
LE-3	If lavatory blue water chemicals are spilled near or gets into a stormwater drain, notify the Airport Communication Center immediately.
LE-4	Do not perform any equipment maintenance near stormwater drains.
LE-5	All leaks of blue water from lavatory equipment should immediately be cleaned up and properly disposed.

### Non-Compliance Items:

- Not reporting spill of waste and potential biohazard to Airport
- Discharging lavatory waste to sanitary sewer connections other than at lavatory waste (triturator) facilities
- Performing lavatory equipment clean out/backflushing at any location other than at triturator facilities
- Disposing of lavatory waste into the trench drains on ramp

### Inspections/Maintenance/Training:

- Perform regular inspections on lavatory equipment including examining hoses for leaks
- Train staff on spill measures

### Applicable Regulations (not all inclusive):

- 6 CCR 1007-2 CO Solid Waste Regulations
- 40 CFR Part 122 National Pollutant Discharge Elimination System
- 5 CCR 1002-61 Colorado Discharge Permit System
- 40 CFR 117.3 Determination of Reportable Quantities for a Hazardous Substance
- Colorado Springs Utilities Wastewater Treatment code Chapter 12, Part 8 Prohibitions and Limitations on Wastewater Discharge of Article 5

## FIRE-FIGHTING EQUIPMENT TESTING (FE)

### Airport Activities:

- Testing fire-fighting equipment

### Potential Pollutants:

- Fire control agents (fire-fighting foam)

### Control Measures:

FE-1	Perform testing only in designated areas.
FE-2	Ensure fire control agents are contained and do not reach storm drains.
FE-3	Properly dispose and/or recycle fire control agents.
FE-4	Disposal of fire control agents to sanitary sewer should only be done with prior approval of Colorado Springs Utilities.
FE-5	Perform testing only in designated areas.

### Non-Compliance Items:

- Release of foam to storm drains
- Disposing of foam into soils

### Inspections/Maintenance/Training:

- Perform Spill response training annually
- Train staff on proper handling and disposal of fire control agents

### Applicable Regulations (not all inclusive):

- 40 CFR Part 122 National Pollutant Discharge Elimination System
- 5 CCR 1002-61 Colorado Discharge Permit System
- 40 CFR 40 Effluent Limitation Guidelines
- 40 CFR 117.3 Determination of Reportable Quantities for a Hazardous Substance
- 40 CFR 260-262 Resource Conservation and Recovery Act (RCRA)

## CONSTRUCTION ACTIVITIES (CA)

### Airport Activities:

- Construction activities at airport or tenant facilities.

### Potential Pollutants:

- Sediment
- Oils/grease
- Vehicle/Equipment fluids
- Fuel

### Control Measures:

CA-1	Utilize structural control measures such as silt fencing, berms, hay bales, erosion blankets or other approved structural control measures/BMPs.
CA-2	Install vehicle tracking at construction entrance and exit locations.
CA-3	Conduct street sweeping of sediment tracked onto roadways by construction equipment/vehicles.
CA-4	Ensure construction contractors are maintaining control measures/BMPs.

### Non-Compliance Items:

- Not obtaining construction stormwater permit if applicable to site
- Not obtaining proper environmental permits for site
- Not installing control measures
- Not maintaining control measures

### Inspections/Maintenance/Training:

- Performing required inspections per construction stormwater permit (if applicable)
- Conducting routine inspections on equipment for leaks
- Conducting annual stormwater training

### Applicable Regulations (not all inclusive):

- 40 CFR 112 Oil Pollution Prevention
- 40 CFR Part 122 National Pollutant Discharge Elimination System
- 5 CCR 1002-61 Colorado Discharge Permit System
- 40 CFR 401 Effluent Limitation Guidelines
- 6 CCR 1007-3 CO Hazardous Waste Regulations
- 33 CFR Parts 320-330 Navigation and Navigable Waters
- 40 CFR 110.3 Discharge of Oil
- 40 CFR 117.3 Determination of Reportable Quantities for a Hazardous Substance
- 5 CCR 1001 – CO Regulation Number 3 - Stationary Source Permitting And Air Pollutant Emission Notice Requirements

## PESTICIDE/HERBICIDE APPLICATIONS (PH)

### Airport Activities:

- Applying pesticides/herbicides around airport or tenant areas.

### Potential Pollutants:

- Pesticides/herbicides

### Control Measures:

PH-1	Implement schedules for application of pesticides, herbicides and/or fertilizers.
PH-2	Do not apply pesticides, herbicides or fertilizers during storm events.
PH-3	Collect and properly dispose unused pesticides, herbicides, and fertilizers.
PH-4	Schedule irrigation to not occur on days where pesticides, herbicides or fertilizers are applied.
PH-5	Use native vegetation or select landscaping plants that require little maintenance and that reduce the need for use of pesticides and herbicides.
PH-6	Utilize integrated pest management measures.
PH-7	Ensure proper permits and certifications are obtained before applying specific pesticides/herbicides.

### Non-Compliance Items:

- Discharging unused pesticides/herbicides to storm drains
- Discharging unused pesticides/herbicides to sanitary sewer
- Not properly disposing of unused pesticides/herbicides off-site
- Not triple rinsing containers
- Only licensed certified pesticide applicators can apply restricted-use pesticides

### Inspections/Maintenance/Training:

- Inspect chemical/pesticide/herbicide storage areas on routine basis to ensure containers are properly stored and labeled in pesticide cabinets
- Only properly trained staff should apply pesticide/herbicides

### Applicable Regulations (not all inclusive):

- 40 CFR Part 122 National Pollutant Discharge Elimination System
- 5 CCR 1002-61 Colorado Discharge Permit System
- 40 CFR 401 Effluent Limitation Guidelines
- 40 CFR 260-262-273 Federal RCRA Regulations
- 40 CFR 150-189 Federal Insecticide, Fungicide and Rodenticide Act Regulations
- 6 CCR 1007-3 parts 260,261,262 and 273 Colorado state RCRA regulation
- 8 CCR 1203-1 Rules pertaining to the Colorado Pesticide Act
- 8 CCR 1203-2 Rules pertaining to the Colorado Pesticide Applicators' Act
- 8 CCR 1206-2 Rules pertaining to the Colorado Noxious Weed Act
- City of Colorado Springs Municipal Separate Storm Sewer System (MS4) Permit
- Colorado Springs Utilities Wastewater Treatment code Chapter 12, Part 8 Prohibitions and Limitations on Wastewater Discharge of Article 5

## PAIN AND PAINTING ACTIVITIES (PA)

### Airport Activities:

- Aircraft painting
- Equipment painting
- Airfield painting

### Potential Pollutants:

- Paint
- Solvents

### Control Measures:

PA-1	Painting activities should be conducted indoors with proper ventilation and emission control.
PA-2	Paint solvents should be recycled and/or properly disposed per local, state, and federal regulations.
PA-3	Aircraft and GSE painting should be performed inside a permitted facility or done off-site.
PA-4	Containers of paints and solvents should be stored indoors or under cover.
PA-5	Empty containers with paint residue should not be stored uncovered outside.
PA-6	When removing paint, collect and dispose of all removed paint and paint waste properly.
PA-7	An MSDS must accompany all paint products.

### Non-Compliance Items:

- Specific painting/stripping activities are not permitted unless done in a paint booth
- Unauthorized painting outdoors that requires a permit

### Inspections/Maintenance/Training:

- Inspect tenant areas to ensure no illegal painting or paint stripping is occurring
- Annual stormwater training

### Applicable Regulations (not all inclusive):

- 5 CCR 1001-2,-3,and -5, Colorado Air Quality Regulations
- 40 CFR Part 122 National Pollutant Discharge Elimination System
- 5 CCR 1002-61 Colorado Discharge Permit System
- 40 CFR 401 Effluent Limitation Guidelines
- 6 CCR 1007-3 CO Hazardous Waste Regulations
- 40 CFR 260-262-273 Federal RCRA Regulations
- 40 CFR 117.3 Determination of Reportable Quantities for a Hazardous Substance

## POTABLE WATER SYSTEM FLUSHING (PW)

### Airport Activities:

- Flushing of aircraft potable water systems, water trucks, pipes

### Potential Pollutants:

- Chlorine Bleach • Purine

### Control Measures:

PW-1	The discharge shall be from a potable water distribution system, tank or storage that has been maintained for potable water distribution use
PW-2	If the discharge is directly to a State surface water (any stream, creek, gully, whether dry or flowing), it must not contain any residual chlorine. The operator is responsible for determining what is necessary for removing chlorine from the discharge
PW-3	The potable water shall not be used in any additional process.
PW-4	The discharge shall not cause erosion of a land surface.
PW-5	The discharge shall not contain solid materials in concentrations that can settle to form bottom deposits detrimental to the beneficial uses of the state waters or form floating debris, scum, or other surface materials sufficient to harm existing beneficial uses.
PW-6	For discharge to the ground, the water should not cause any toxicity to vegetation. When discharging, allow the water to drain slowly so that it soaks into the ground as much as possible.
PW-7	The discharge should be conducted to minimize the potential to pick up additional suspended solids. When possible, a best management practice for filtering or settling suspended solids and other debris should be used to remove suspended solids or other debris.
PW-8	The discharge should be conducted to minimize the potential that it will not pick up any oil and grease.
PW-9	Collect all discharge from aircraft potable water flushing or water truck flushing containing Purine, chlorine bleach or other chemicals and properly discharge to a permitted sanitary sewer connection, or recycle the water.
PW-10	Located away from storm drain inlets or drainage facilities.
PW-11	When discharging to land, allow the water to drain slowly so that it soaks into the ground as much as possible.
PW-12	When possible, an absorbent oil pad, boom or similar device should be used to eliminate oil from the discharge.

### Non-Compliance Items:

- Conducting potable water flushing without following the CDPHE LOW RISK DISCHARGE GUIDANCE: DISCHARGES OF POTABLE WATER, Revised August 2009 WQP-27

### Inspections/Maintenance/Training:

- Monitor flushing operations to ensure operations meet above guidelines.
- Provide annual stormwater training.

### Applicable Regulations (not all inclusive):

- 40 CFR Part 122 National Pollutant Discharge Elimination System
- 5 CCR 1002-61 Colorado Discharge Permit System
- 40 CFR 117.3 Determination of Reportable Quantities for a Hazardous Substance
- 40 CFR 401 Effluent Limitation
- 33 CFR Parts 320-330 Navigation and Navigable Waters
- Colorado Springs Utilities Wastewater Treatment code Chapter 12, Part 8 Prohibitions and Limitations on Wastewater Discharge of Article 5

## TREATMENT CONTROLS (TC)

### Airport Activities:

- Use of pretreatment controls such as oil/water separators, grease traps, sand traps, street sweepers and the use of stormwater controls including catch basins, detention ponds and vegetative swales, etc.

### Potential Pollutants:

- Sediment
- Debris
- Oil/Grease

### Control Measures:

TC-1	Glycol Diversion Structure inspections and maintenance.
TC-2	Scheduled maintenance/pumping of oil/water separators and sand traps.
TC-3	Inspect ditches and vegetated swales on a regular basis and after significant rain events for erosion.
TC-4	Pavement cleaning to include street sweeper to contain and properly dispose wash wastewater.
TC-5	Detention ponds should be maintained through regular inspections, removal of debris and sediment buildup and erosion repair.

### Non-Compliance Items:

- Release of oil, grease, sediment, or trash to storm drains

### Inspections/Maintenance/Training:

- Annual inspections of glycol diversion structure
- Inspect oil/water separators and have them cleaned for proper function to ensure operating effectively
- Keep records of inspections and maintenance
- Inspect swales regularly and especially after significant precipitation events to check for erosion
- Ensure detention ponds are inspected on a routine basis and at least after significant precipitation events
- Regular inspection of pavement for leaks/debris to clean
- Annual stormwater training and annual spill training

### Applicable Regulations (not all inclusive):

- 40 CFR Part 122 National Pollutant Discharge Elimination System
- 5 CCR 1002-61 Colorado Discharge Permit System
- 40 CFR 117.3 Determination of Reportable Quantities for a Hazardous Substance
- 40 CFR 401 Effluent Limitation
- 33 CFR Parts 320-330 Navigation and Navigable Waters
- City of Colorado Springs Municipal Separate Storm Sewer System (MS4) Permit
- Colorado Springs Utilities Wastewater Treatment code Chapter 12, Part 8 Prohibitions and Limitations on Wastewater Discharge of Article 5

**APPENDIX A3**  
**EVALUATION OF NON-STORMWATER DISCHARGE**  
**CERTIFICATION FORM (FORM 1)**

---

FORM 1  
Evaluation of Non-Stormwater Discharge

Tenant: \_\_\_\_\_

**Non-Stormwater Discharges Not Allowed to Stormwater System**

Unauthorized non-stormwater discharges cannot be discharged (except to the sanitary sewer system with permission) from your facility unless authorized by a separate, individual Colorado Discharge Permit System (CDPS) permit. Allowable non-stormwater discharges are listed below per Part I.A.1.b (Page 6 and 7) of the Industrial Stormwater Permit.

*All discharges authorized by this permit shall be composed entirely of stormwater discharges associated with industrial activity.* Discharges of material other than stormwater must be addressed in a separate CDPS permit issued for that discharge or must meet the requirements of the low risk discharge guidelines (portable water discharge, uncontaminated groundwater discharges to ground, power washing discharges to land, snow melt or fire safety maintenance) per the Colorado Department of Public Health & Environment, Water Quality Control Division.

Examples of non-stormwater discharges include but are not limited to the following:

- Wastewater (process water and wash water)
- Construction stormwater
- Discharge of high chlorination potable water lines for disinfection
- Commercial washing of outdoor structures
- Condenser, non-contact cooling water, non-contact heating water
- Subterranean dewatering or well development
- Steam cleaning
- Deicing/Anti-icing fluids
- Disposal of liquids for bulk tanks
- Fire-fighting foam testing
- Floor drains, sinks, sanitary lines and similar drainages connected to stormwater drains or conveyances

FORM 1  
Evaluation of Non-Stormwater Discharge

**Discharges Allowed to Stormwater System**

Discharges from the following sources may be authorized by this permit, provided that:

- Uncontaminated condensate from air conditioners, coolers, and other compressors and from the outside storage of refrigerated gases or liquids;
- Landscape watering provided all pesticides, herbicides, and fertilizer have been applied in accordance with the approved labeling;
- Uncontaminated spring water;
- Foundation or footing drains where flows are not contaminated with process materials;
- Incidental windblown mist from cooling towers that collects on rooftops or adjacent portions of the facility, but not intentional discharges from the cooling tower (e.g., —piped, cooling tower blowdown or drains); and
- Emergency fire fighting activities

*No other non-stormwater discharges are allowed.*

**Evaluation Methods:**

1. Visual inspection of facility and stormwater conveyances that could be viewed from the land surface without entry into confined spaces.
2. Direct inspection of drainage lines as observed at manholes, inlets and outfalls.
3. Review of drainage plans and engineering drawings of sewer and other utilities.
4. Special drainage flow studies using trace methods.

**CERTIFICATION AND COMPLIANCE STATEMENT**

This facility is regularly inspected for potential non-stormwater discharges as mentioned above and is in compliance with the terms and conditions of the Colorado Springs Airport's Stormwater Discharges Associated with Non-Extractive Industrial Activity permit.

I certify that this to be true, accurate, and complete, to the best of my knowledge and belief:

**APPENDIX A4**  
**SWMP CERTIFICATION FORM**  
**FORM 2**

---

**FORM 2**  
**SWMP Certification Form**

This Stormwater Management Plan (PLAN) certification is for a tenant at the Airport (TENANT).

Certification is provided for items identified below and should be checked-off by the certifying person using his/her initials. Any certification provided applies only to the TENANT identified below and initialed certification element(s) below as they pertain to the PLAN and its implementation as it may apply to the TENANT:

**TENANT:**

Initials	Certification Elements
	The PLAN has been reviewed by the TENANT and TENANT agrees to abide by the contents of the PLAN.
	Training on stormwater management has been given to the staff of the TENANT in accord with the PLAN requirements within the twelve (12) month period.
	Inspections have been performed to review and evaluate the effectiveness of the PLAN and appropriate corrective actions have been implemented where necessary to comply with the PLAN.
	The PLAN is consistent with other plans and policies of the TENANT, with the exceptions, if any, as follows:
	The TENANT is in compliance with the PLAN.

**CERTIFICATION AND COMPLIANCE STATEMENT**

I certify that this report is true, accurate, and complete, to the best of my knowledge and belief:

## TENANT OPERATIONS CHECKLIST

TENANT:

CONTACT PERSON:

DATE:

### WASTEWATER AND STORMWATER MANAGEMENT

<b>Permits</b>	Does the tenant have any other permits besides being covered under the Airport stormwater permit? If Yes, list here:	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
<b>Wastewater</b>	How does the tenant manage its wastewater? If discharging wastewater to sanitary sewer, has the tenant notified Colorado Springs Utilities (CSU) and received approval for discharges?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
	Does the tenant wash equipment, vehicles, or aircraft on-site? If yes, is it done in a wash bay? Is it done indoors? Has the tenant got approval to conduct washing activities outside implementing low risk discharge guidelines?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA <input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA <input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA <input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
	Does the tenant facility have pretreatment devices (sand traps, grease traps, oil/water separator), etc.?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
	How does the tenant manage the pretreatment devices? <b>Scheduled inspection/cleaning and maintenance by outside vendor/in-house /Other?</b>	<input type="checkbox"/> NA
	How does the tenant clean outdoor pavement? <b>Sweeping/Cleaners/chemicals/detergents/powerwash/floor dry/Other?</b>	<input type="checkbox"/> NA
	<b>Non-Stormwater Discharge</b>	Does the tenant conduct firefighting testing with aqueous firefighting foam (AFFF)? How is the AFFF managed so it doesn't discharge to storm drains?
<b>Material Storage</b>	If the tenant stores materials outside, does the tenant protect them from contact with <b>stormwater using pallets/cover/secondary containment?</b>	<input type="checkbox"/> NA

### MAINTENANCE

Does the tenant perform maintenance on equipment, vehicles, or aircraft on-site? If Yes, complete the rest of the Maintenance section, otherwise, proceed to next section.		<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
Are maintenance activities performed indoors or outdoors?		
<b>Used Oil and Used Filters</b>	Are used oil containers/tanks and associated piping labeled "used oil"?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
	How does the tenant manage/dispose of used oil? <b>Sent off site for recycling / Burned onsite / Other / NA</b>	<input type="checkbox"/> NA
	How does the tenant manage/dispose of used oil filters? <b>Recycle off-site through vendor/Other/NA</b>	<input type="checkbox"/> NA
<b>Hazardous Waste Generation Storage and Management</b>	Does the tenant generate hazardous waste? If yes, does it have an EPA hazardous waste generator ID number? (if applicable) certain threshold quantities apply.	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
	Does the tenant store hazardous waste/chemicals in appropriate storage containers? Are MSDSs available at your facility for all chemicals?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
	How does the tenant manage/dispose of its hazardous waste? <b>Recycling facility / An Interim status facility / On site RCRA-permitted TSD / Other / NA</b>	<input type="checkbox"/> NA
	Does the tenant have a written contingency plan or basic contingency procedures in place for responding to spills and releases of hazardous wastes?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
<b>Used Battery Storage and Disposal</b>	How does the tenant manage/dispose of used batteries? <b>Return to supplier / Recycle / Service company / Universal waste handler / Send to hazardous waste landfill / Other / NA</b>	<input type="checkbox"/> NA
<b>Used Shop Towels/Rags</b>	Does the tenant use shop towels or red rags?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
	How are used shop towels or red rags managed? <b>Laundry service / Burned for heat / Hazardous waste transporter / Other / NA</b>	<input type="checkbox"/> NA
<b>Used Tires</b>	Does the tenant store and dispose of used tires? If yes, how are the tires	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA

## TENANT OPERATIONS CHECKLIST

	stored/disposed? <b>Stored inside/under cover/on pallets/Recycle off-site using vendor</b>	
<b>Used Brakes</b>	Does the tenant have to manage used brakes?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
	How does the tenant manage asbestos brake pads and other asbestos-containing material (ACM) waste?	
<b>Refrigeration Equipment</b>	Does the tenant maintain and/or repair CFC-containing equipment?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
	If Yes, how does the tenant manage equipment containing ozone-depleting refrigerants?	
<b>Spent Solvents and Parts Cleaning</b>	Does the tenant use a parts washer on site?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
	How does the tenant manage/dispose of spent solvents? <b>Third party vendor / Permitted discharge to storm sewers or surface waters / Permitted discharge to sanitary sewer / Other / NA</b>	<input type="checkbox"/> NA
<b>MATERIALS STORAGE AND HANDLING</b>		
<b>Storage Tanks</b>	Does the tenant have AST or USTs and are they registered with the State (if applicable?)	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
	Does the tenant have a Spill Prevention, Control, and Countermeasures (SPCC) plan signed by a Professional Engineer (if applicable)?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
	Does the tenant have the proper Airport notification procedures posted on site for immediate reporting of spills?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
	Does the tenant store any extremely hazardous substances (ammonia, nitric acid, sulphuric acid) listed in 40 CFR Part 355 in excess of threshold planning quantities? Regs: CERCLA/EPCRA	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
<b>Equipment</b>	Does the tenant store GSE/vehicles/equipment outside?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
<b>Garbage</b>	Does the tenant have a trash dumpster on site?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
<b>Chemicals</b>	Does the tenant store chemicals on site? Section 311 of EPCRA requires the tenant to report to the SERC, LEPC, and local fire department the presence of hazardous chemicals in excess of reporting thresholds at the facility (40 CFR Part 370).	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
<b>Universal Waste</b>	Are any hazardous waste managed as universal waste? (spent bulbs (CFLs, fluorescent), electronic waste – computers, printers, electronics, aerosol cans?)	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
<b>PCBs</b>	Does any electrical equipment contain PCBs?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
<b>Recycling</b>	Does the tenant recycle? If so, what - (office paper, plastic, aluminum, cardboard, steel, etc.)? Does the tenant recycle scrap metal?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
<b>DEICING</b>		
<b>Aircraft Deicing</b>	Does the tenant have any glycol tanks? If so, what type of propylene glycol (Type I or IV)	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
	How does the tenant dispose of spent deicer (if not located at Airport terminal)?	<input type="checkbox"/> NA
<b>Pavement Deicing</b>	Does the tenant use any deicer for ramps, sidewalks, etc.? If Yes, what is the name of the product?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
	Does the tenant keep a copy of the MSDS for the pavement deicer? <b>A copy of the MSDS needs to be submitted to the Airport SWMP Administrator.</b>	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
<b>FUELING</b>		
<b>Aircraft Fueling</b>	Does the tenant use measures to prevent fuel spills during fueling of aircraft? Does the tenant have a spill kit?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> NA
	How does the tenant manage used absorbents used from spills? <b>Contract with vendor for disposal/Other/NA</b>	<input type="checkbox"/> NA

**APPENDIX A13**  
**SPILL PROCEDURES**

---

**Procedure Created/Revised: 1/2018**
**Procedure Administrator: Airport Environmental/Kris Andrews**

**Description** – The Tenant Spill Procedures outline the notification process and cleanup of spills or leaks caused from tenant tanks, equipment, containers or other media. These procedures pertain to all spills and environmental releases including but not limited to fuel, oil, chemicals, hazardous materials and substances, hazardous waste, special waste, and sewage.

**NOTIFICATION/REPORTING SPILLS**

- **Contact Airport Communications Center at 550-1919 immediately for all significant spills and any spill that reaches a storm drain, sanitary sewer or soil or requires an emergency response.** Provide information on material spilled, estimated amount, name of personnel including any contractors involved, type of containment, etc.
- Spills that reach a storm drain, sanitary sewer or that spills off-site may require notification to local or State agencies. Agency notification is outlined in the table below.
- Spills of oil-filled equipment also need to follow Reporting requirements as outlined in applicable facility Spill Prevention Control & Countermeasure Plans (SPCC).

**SPILL THRESHOLDS AND AGENCY NOTIFICATION**

Environmental Regulation	Type of Release	Reportable Quantity	Agency Notification
Clean Water Act/NPDES	Chemical, oil, petroleum product, sewage	Any amount that enters water of the state (surface water, groundwater, dry gullies or storm sewers)	National Response Center, CDPHE, local
Storage Tanks	Underground Storage Tank (UST) or Aboveground Storage Tank (AST)	25 gallons	Division of Oil & Public Safety, CSFD
Clean Air Act	Hazardous Air Pollutants	CERCLA List of hazardous substance (40 CFR Part 302, Table 302.4)	Colorado Department of Public Health and Environment (CDPHE), Local
CERCLA/EPCRA	Hazardous substances	EPA Lists of Lists (EPA 550-B-15-001) March 2015	National Response Center, US EPA Region 8, CDPHE, Local
RCRA	Hazardous wastes	(40 CFR Part 302, Table 302.4)	National Response Center, US EPA Region 8, CDPHE, Local LEPC

**SPILL CLEANUP**

**FOR LARGE SPILLS OR ANY SPILL THAT CANNOT BE SAFELY ABSORBED/NEUTRALIZED OR POSES A THREAT, CONTACT COMMUNICATIONS CENTER IMMEDIATELY AND DO NOT ATTEMPT TO CLEAN UP**

**Cleanup for small incidental leaks and spills that can be safely absorbed at the time of the release by an Airport City Employee that has received annual spill training (this does not include tenant spills):**

1. Assess risk by determining nature and substance of spill/leak
2. Contain the leak/spill and protect any drains
3. Control spill by stopping release – close valves or shut-off source of leak or spill if safe to do so
4. Clean up spill by using spill cleanup material and wearing appropriate personal protective equipment
5. Use non-sparking equipment (shovels, brooms) when cleaning up flammable material
6. Use MSDS/SDS to identify special clean-up procedures for substance spilled
7. Once area is cleaned up, ensure area is restored and check to see if spill kit/absorbent materials need restocked
8. Properly dispose of spill materials off-site

**TRAINING/SAFETY**

- Personnel that respond to spills and/or releases must be trained in proper management and spill reporting procedures.
- Personnel involved with fueling activities for systems regulated under 40 CFR Part 112 require annual training.
